35279. Re: [bayscan] BART talkgroups?

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-01 01:21:51 UTC
From: caladded@aol.com
Topic: 35268 Message: 35279

The 02-021 thru 02-037 are train operations. 00-001 thru 00-011 are also train ops , don't ask me the differance , i don't know

Police are 00-021 thru 00-035

Fire use 00-041 - 0044 SFFD/ 0045-0050 Oakland/00-051 - 00-054 Berkeley and 00-055 - 00-060 Contra Costa. Don't have any for San Mateo County , although I know they have multiple HHs for their use if need be. Stations ops for BART are on 04-021 thru 04-027

Kelty has 1-1/2 pages of Talkgroups for them , SU has the new 2005 book for Golden Gate.....good reference.

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-01 01:24:21 UTC
From: caladded@aol.com
Topic: 35272 Message: 35280

yeah, what are the chances of " sneaking it in " LOL , not to mention having
a " few" before/ after..... hope its peaceful, we'll see.

I mentioned this before, but Friday is the most dangerous night of the week
on the highways. Add New Years eve' and the rain AND
alcohol.....good night to sit on the couch and fire up' them scanner.

35281. OT-- the "other" bay... NYPD feed

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-01 01:27:53 UTC
From: KG6VXT
Topic: 35281 Message: 35281

Listening to the teamspeak feed on scannerbuff.net
radio.scannerbuff.net:8767

Looks like they dropped the registration requirement for
the night BTW.

NYPD feed is starting to get REALLY busy.

Some impromptu protest crowd that they are trying to get
under control, amongst all the Time's Square crowd mess.

35283. San Diego / Southern Cal

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-01 01:55:22 UTC
From: Ed
Topic: 35283 Message: 35283

First , Southern Cal is really getting hit hard by the storms,
check out CHP/los Angeles or San Diego at times

Firefeeds.com has San Diego City Fire Department and uses the
following channels

7A 7B 7C 7E 7F 7H 7I 8A 8B 8D 8E 8G 8H 9A 9B 9D 9E 9G 9H and

the following lifeguard TGs
Dispatch , River Rescue, River Rescue Tac , Tacs 1 thru 7

Been listening to it the past 1/2 hour / loud and clear and fairly
busy.

Ed

That's why we're sending the Third Marine Expeditionary Force, which includes several engineering battalions. They'll be able to get their equipment off the LPD's with airfoil landing craft or helicopters. Certainly a better use of resources than sending a few USAR team members to do what the military already does best.

Thanks much Ed. I won't have too much time to listen tonight, have to go play a music gig in North Beach but will take the scanner for trip too and from the gig. Remember to delay your Happy New Year countdown a nanosecond or so to account for the rotational change of the earth brought on by last weeks Great Quake.

From: calidude692
Topic: 35278 Message: 35288

For clarification, that is the San Diego City system and not the
County RCS. RCS is the 800 system for everybody but San Diego City.

Looks like 02-05{1,2,3,4} are in use for the DUI/extra tows. And very busy :-)

Possible that they are lined up with Patrol 1/2/3/4 ...

Also: references to "tows on Tac 9" ... which i guess could be 02-054?

Correct and Correct.....the SFFD talkgroups I refered to are for the BART radios that the SFFD uses for a BART incident, same is true for the other agencies.....Berkeley Fire and Con Fire are conventional and use the EDACS Tgs for BART. BART also has EDACS radios for San Mateo county fire agencies like Millbrae,San Bruno , North County Fire for use in BART incidents. For SFFD communications with each other and their dispatch, they are their own radios and that is Moto 2.

To add to this. These radios (BART-Edacs) could be of great use for SFFD and Oakland to communicate with each other for a transbay incident such as the one they had several years ago that resulted in the death of an OFD Lieutenant. Not that radios did or did not have to do with his death, he ran out of air. I never saw the official report of why that happened.

Nina,

I think there are five basic choices:

1. Butel
2. Scancontrol
3. EScanner
4. ScanCat
5. WinScan

Not being a Uniden user, I only know what I read about these programs so I'm sure other will be of more help. It seems the EScanner, which is made by Uniden, is clearly the worst of the bunch. Butel and WinScan seem to get the best reviews although WinScan is apparently better for computer control of your Uniden compared to just managing frequency lists. I'm sure others will jump in.

BTW, it was amazingly quiet up here last night. It usually sounds like a war zone fo a half hour before and after midnight. We had some fireworks and other "noisemakers for about five minutes at midnight and then quiet. Nothing happening on the scanner either. Maybe it was the weather but it was a little strange.

Regards, Jim

Arson ? - Nina , Prior fires in area, man seen running from house just before flames seen. (I have heard of at least 2 other fires right near this myself) Sheriffs and Arson team WELL aware of this situation

Structure fully involved. E11 replaced E3 on 3rd alarm

this is on San Mateo Thomas Brothers map page 749 G6

those not familiar , this is slightly N/W of Alameda De Las Palmas/Edgewood.

Not far from Sequoia Hospital and Canada College

ED

[Non-text portions of this message have been removed]

35308. oops , meant Alameda de las PULGAS not palmas EOM

35326. Re: Possible homicide in Larkspur

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-04 16:16:21 UTC
From: gariac450
Topic: 35319 Message: 35326

I've never done this, but I know it is possible to buy the police reports. I had spent a God awful long time in the Sunnyvale PD foyer once waiting to give my statement on a bank robbery and the procedure to get police reports was posted on the bulletin board.

Now that California has something similar to a FOIA (freedom of information act), this may be easier to do.

BTW, what is the other twin city?

I've never done this, but I know it is possible to buy the police
reports. I had spent a God awful long time in the Sunnyvale PD foyer
once waiting to give my statement on a bank robbery and the procedure
to get police reports was posted on the bulletin board.

Now that California has something similar to a FOIA (freedom of
information act), this may be easier to do.

BTW, what is the other twin city?

35328. Yaesu FT-8800R

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-04 16:29:01 UTC
From: brianc_95008
Topic: 35328 Message: 35328

Hi all,

I know some of the folks on this group are hams and would like to know if any of you are running the new Yaesu FT-8800R mobile 2M/440 rig and what you think of it?

I know it's not exactly "scanning" related, although this radio will receive way out of band, but I thought I'd throw the question out there before I go buy this radio.

Thanks in advance!

Subject: [bayscan] Valota Road Redwood City all day?

I heard some stuff on the scanner about a swat team at Valota Rd, then
I heard they were closing off the street. Then, on Firedispatch.com,
they list a medical aid on Valota, and its been on the active list all
day.

Anybody know what happened?

35330. Re: [bayscan] Yaesu FT-8800R

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-04 17:01:55 UTC
From: Jordan Hayes
Topic: 35328 Message: 35330

I think this is not at all off topic! Ham gear can fill in some nice spots and compliment scanners. I'm pretty sure that I listen to channels on my ham radios that I'm not licensed to transmit on more than ones I am :-}

> I know it's not exactly "scanning" related, although this
> radio will receive way out of band ...

And how! I have one in the Berkeley hills and the other night I was chatting with a pal of mine in Mtn. View. He asked me if I could hear MVPD on 482.5125; I dialed it into my 780. I have one of these on my roof:

http://www.grove-ent.com/ANT9.html

I heard nothing, even with the squelch off. I have good cable, not too long. I can hear aircraft for 250+ miles. I got zip.

Then I tried my FT-8800R and noticed that I could only do 482.510 because the Yaesu only goes down to 5kHz steps, but I receive them loud and clear. I have a Diamond X6000A on the roof:

http://www.universal-radio.com/catalog/hamants/1486.html

It has better cable because it needs to support 23cm, but still. And the combination of this radio and the antenna seems to pull in VHF/Air better (even with a duplexer that should be cutting down on that band) in some cases than the scanner.

I think there are a bunch of radios in this class/price, and it might just come down to what you're used to or if there's a particular feature you're looking for. I have no complaints so far, but if I were doing it again I just might wait until the Kenwood TM-V708A ships: it's the same radio as the TM-D700 but without the APRS stuff. Since I have a TM-D700 in my truck, I'd love to have the same interface at home, and of course the display is beautiful. But that's me.

35331. Re: [bayscan] Yaesu FT-8800R

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-04 16:43:12 UTC
From: Scanner 4
Topic: 35328 Message: 35331

now has been replaced by the FT-7800 which will do the Cross Band repeat.

I had a FT-8100M which was a much better radio with one of the best front ends in a mobile radio of that type(receivers)

when SFFD was on T-band (before the current trunking system) I would get a TV station audio alone with SFFD and made Control unusable for me and the only radio that would just listen without the bleed over was my FT-8100, I had hard times for a while and sold it (BIG MISTAKE) now I'm running mostly Kenwood VHF/UHF and Yaesu H/F gear and all of my H/T's are Motorola.

I have a few thing about the Yaesu line of radios if you would like contact me off list (and no I don't work for Yaesu but I'm a ham)

I think you've got this backwards: the FT-8800R will cross-band-repeat while the FT-7800R will not. The 7800 is also $100 cheaper, perhaps reflecting this.

Looks like MERA is going 6 digits all of the sudden with their TG's...so far anyway.

Also, heard Radio Shop testing on TG 63120 again...for the past few months this TG seems to have a lot of testing going on sometimes and other times it sounds like Rangers of some sort.

oopps Forgot the link sorry folks.. Here it is. This is very
interesting and could be a VERY good scanning op.

I managed to see the story without subscribing. However when I try to go back, it prompts to subscribe. Must have used my one free pass ;) Here is the trouble...

THREE NASTY SYSTEMS TO CONVERGE ON U.S.

WASHINGTON - Moisture-laden storms from the north, west and south are likely to converge on much of America over the next several days in what could be a once-in-a-generation onslaught, meteorologists said Tuesday.

If the gloomy computer models at the U.S. Climate Prediction Center are right, we will see this trio:

? The ``Pineapple Express,'' a series of warm, wet storms heading east from Hawaii, drenching Southern California and the far Southwest, which already are beset with heavy rain and snow. It could cause flooding, avalanches and mudslides.

? An ``Arctic Express,'' a mass of cold air chugging south from Alaska and Canada, bringing frigid air and potentially heavy snow and ice to the usually mild-wintered Pacific Northwest.

? A warm, moist storm system from the Gulf of Mexico drenching the already saturated Ohio, Tennessee and Mississippi valleys. Forecasters also expect heavy river flooding and springlike tornadoes.

All three are likely to meet somewhere in the nation's midsection and cause more problems, sparing only areas east of the Appalachian Mountains.

``You're talking a two- or three-times-a-century type of thing,'' said prediction center senior meteorologist James Wagner, who has been forecasting storms since 1965. ``It's a pattern that has a little bit of everything.''

Forecasters said the Bay Area can expect lower temperatures and lots of rain from the storm.

The exact time and place of the predicted one-two-three punch changes slightly with every new forecast. But in its weekly ``hazards assessment,'' the National Weather Service alerted meteorologists and disaster specialists Tuesday that flooding and frigid weather could start as early as Friday and stretch into early next week, if not longer.

``It's a situation that looks pretty potent,'' said Ed O'Lenic, the Climate Prediction Center's operations chief. ``A large part of North America looks like it's going to be affected.''

In Northern California, there will be more rain, with snow in the mountains, said Rick Canepa, a meteorologist at the National Weather Service's Monterey Office.

``We're easily talking a few inches of rain in the valleys that will translate to many feet of snow in the mountains,'' Canepa said.

It will be a few degrees chillier than normal in the Bay Area, with lows over the weekend in the mid-30s to mid-40s.

The storms also will increase beach swells from the normal of about 10 feet to 12 to 14 feet, Canepa said.

``It looks like a pattern that's actually going to stick around possibly out 10 days, until the middle of the month,'' Canepa said.

Kelly Redmond, the deputy director of the Western Regional Climate Center at the Desert Research Institute in Reno, where an unusual 18 inches of snow is on the ground already, said the expected heavy Western rains could cause avalanches. Since Oct. 1, Southern California and western Arizona have had three to four times the average precipitation for the area.

The last time a similar situation seemed to be brewing -- especially in the West -- was in January 1950, O'Lenic said. That month, 21 inches of snow hit Seattle, killing 13 people in an extended freeze, and Sunnyvale got a tornado.

The same scenario played out in 1937, when there was record flooding in the Ohio River Valley, said Wagner, of the prediction center.

Meteorologists caution that their predictions are only as good as their computer models. Forecasts are less accurate the further into the future they look. ``The models tend to overdo the formation of these really exciting weather formations for us,'' said Mike Wallace, a University of Washington atmospheric scientist.

Yet the more Wallace studied the models, the more he became convinced that something wicked was coming this way.

``It all fits together nicely,'' Wallace said. ``There's going to be weather in the headlines this weekend, that's for sure.''

The converging storms are being steered by high-pressure ridges off Alaska and Florida and are part of a temporary change in world climate conditions, O'Lenic said

Well.... like ALL THE NEW Uniden scanners coming out since the BC245, I have to say, it's probably not accessible for those of us who can't see the displays. I for one feel more and more left behind and, Uniden just doesn't give one crap about it. In all fairness, none of the other scanner companies do either. Maybe I'll have to get like those environmentalists that torch SUV's and start torching scanners! Now there's an idea. Anyone want to help?? Jim

maybe do what some of the real serious scannerfans do, if you want a good portable, get a Moto MTS2000 or whatever (set the xmit fields to zero).

What Jim needs is voice synthesis in the scanner to read out the display. I don't think Moto will build that in their commercial gear, though I've seen it built into FRS radios.

I discussed the voice synthesis with Uniden once. They said they were working with an outside consultant on such a feature. The reality is unless the government mandates such gear exists, the free market won't build it. You wouldn't have those wheelchair ramps at restaurants if it wasn't for the ADA.

I think the ham gear with voice synthesis came about due to remote base features. Early remote base gear would beep to respond to commands, and that wasn't exactly good feedback. Later gear used voice synthesis to read back the programmed values.

While I am sure most hear feel for Jim (being he, like us is a scanner nut) what it comes down to is supply and demand. How many people are out there who ARE scanner nuts and can't see? I have to believe the number isn't all that much. You can't compare it to ramps for those wheelchair bound for restaurants because the demand is there where for scanners for the blind, the demand is NOT. I doubt strongly the ADA or ANY group would lobby for such a device. Still, I would like to see some product that would adapt a scanner so Jim can continue to enjoy the hobby.

I was wondering if the programming software for these new scanners is adaptable to the speech software that's out there. Since the Uniden scanners are "controllable" there's some hope there. I don't know enough about the speech stuff Jim uses, though.

Jim: I know I promissed you some time with my 246T, but I've been up to my eyeballs in work and travel and will get to it soon.

35371. POWERFUL PACIFIC STORM TO AFFECT CALIFORNIA COASTAL WATERS TONIGHT

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-06 20:16:29 UTC
From: Robert W. Sanford
Topic: 35371 Message: 35371

Looks like we are going to get another storm starting tonight:

NATIONAL WEATHER SERVICE SAN FRANCISCO CA
1116 AM PST THU JAN 6 2005

...POWERFUL PACIFIC STORM TO AFFECT CALIFORNIA COASTAL WATERS TONIGHT
THROUGH FRIDAY...

.AT 11 AM...A DEVELOPING PACIFIC GALE WAS CENTERED ABOUT 500 NAUTICAL
MILES WEST OF MONTEREY...APPROACHING THE CALIFORNIA COAST. THIS
SYSTEM IS EXPECTED TO STRENGTHEN INTO A 988 MB STORM BEFORE REACHING
THE COAST NEAR POINT ARENA FRIDAY MORNING.

PZZ530-535-550-555-570-575-070600-
COASTAL WATERS FROM PIGEON PT. TO PT. PIEDRAS BLANCAS CA OUT 20 NM-
COASTAL WATERS FROM PT. ARENA TO PIGEON PT. CA OUT 20 NM-
MONTEREY BAY-SAN FRANCISCO/SAN PABLO/SUISUN BAYS AND THE WEST DELTA-
WATERS FROM PIGEON PT. TO PT. PIEDRAS BLANCAS CA FROM 20 TO 60 NM-
WATERS FROM PT. ARENA TO PIGEON PT. CA FROM 20 TO 60 NM-
1116 AM PST THU JAN 6 2005

AS THE DEVELOPING PACIFIC STORM APPROACHES...EAST TO SOUTHEAST WINDS
WILL INCREASE OVERNIGHT. WINDS WILL REACH GALE FORCE SOUTH OF POINT
ARENA BY 3 AM FRIDAY MORNING...WITH SUSTAINED WINDS OF 25 TO 35 KNOTS
AND FREQUENT GUSTS TO 45 KNOTS. ALONG THE CENTRAL COAST...SOUTH OF
PIGEON POINT...SUSTAINED WINDS AS HIGH 45 KNOTS WITH FREQUENT STORM
FORCE GUSTS TO 55 KNOTS ARE EXPECTED JUST BEFORE AN ASSOCIATED COLD
FRONT MOVES ONSHORE AROUND SUNRISE FRIDAY MORNING. THIS DANGEROUS
SYSTEM HAS THE POTENTIAL TO PRODUCE LOCAL HURRICANE FORCE GUSTS TO 70
KNOTS IN THE TYPICALLY WINDIER SPOTS SUCH AS ANGEL ISLAND AND POINT
SUR.

ALONG WITH THE STRONG WINDS WILL COME LARGE...SHORT PERIOD SEAS. THE
STRONG WINDS WILL GENERATE SHORT PERIOD WIND WAVES OF UP TO 10
FEET...WITH THE HIGHEST SEAS SOUTH OF POINT REYES. IN ADDITION TO THE
WIND WAVES...WEST SWELLS WILL BEGIN TO BUILD OVERNIGHT...WITH
COMBINED SEAS REACHING AS HIGH AS 18 FEET BY LATE FRIDAY. AS THE
STORM MOVES ONSHORE FRIDAY...WINDS AND WIND WAVES WILL SLOWLY
EASE...BUT THE LARGE SWELLS WILL PERSIST WELL INTO THE WEEKEND.

IF AT ALL POSSIBLE...MARINERS SHOULD STAY IN PORT TONIGHT AND FRIDAY
DURING THIS DANGEROUS STORM. IN ADDITION...MARINERS SHOULD TAKE
NECESSARY PRECAUTIONS NOW TO PROTECT THEIR VESSELS FROM THE STRONG
WINDS AND LARGE WIND DRIVEN SEAS WHICH MAY BE DAMAGING EVEN IN PORT.
STAY TUNED TO NOAA WEATHER RADIO OR YOUR LOCAL MEDIA OUTLET FOR

FURTHER UPDATES ON THIS DEVELOPING WEATHER SITUATION.

There are blind hams out there, so I would expect there are blind scanner enthusiests.

If you think back to the time prior to the ADA, you didn't see many people in wheelchairs in restaurants.

Uniden wanted a very sophisticated system where it could do text to speech. That is, a bit more than just spitting out the numbers. Maybe they over reached, but you have to look at it from a corporate viewpoint. Uniden makes more than just scanners, thus the voice synthesis could be used across all their product lines.

35374. Santa Clara County Med. Frequencies

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-06 22:17:45 UTC
From: brianc_95008
Topic: 35374 Message: 35374

Cross post from Santa_Clara_County_Scanning regarding AMR. Very interesting reading....

Hello scanners and other listeners,

I talked to my friend the supervisor at County Communications today and
got the following information regarding the ambulance/paramedic system.

Motorola no longer manufactures the pagers that the County was using to
"alert dispatch" paramedic crews on 800 mHz, so they had to switch to
450 mHz pagers.

In order for the crews to hear the voice messages on the pagers, it was
necessary to transmit the voice dispatch on 450 mHz, as well as on 800
mHz (the frequency now called "Med 91"), for the crews that were in
their rigs.

So a decision was made to have the dispatchers simulcast on Med 91 and
Frequency 9. It is not a full simulcast repeat system; paramedic voice
traffic is not repeated onto Freq. 9, all you hear is the dispatcher.

I asked "What about the BLS ambulances?", all the private companies that
have been on Frequency 9, and was told that they will all be upgraded to
800 mHz radios. I believe that will create another set of "issues," but
since it's no longer my problem, I'll be glad to let them all work it
out.

As for "Med 92," the former "Control 92," it is no longer used for
hospital ringdowns, but is reserved as a command channel for major
incidents. Hospital ringdowns are now being handled exclusively by
cellular phone.

Frequencies:

Med 91 856.4375
Med 92 857.4375
Freq 9 453.100

Questions, or anything I left out? Please post here.

This may be the ultimate plan, but as of right now Med 92 is still a backup system for when the cellular network is busy. I still hear ringdowns 4-5 times per night.

There is a SCC EMS document describing their overall planned changes (the above is listed), and their progress to date. I had posted a link to it some months back, and no longer have it saved, but I guess I'll search the archives.

From: Roger Strohmeyer
Topic: 35380 Message: 35380

A few minutes ago I heard some interesting chatter on TG 8272 which I have on my MERA list as Marin County Comm Fire Dispatch 2...one side of the conversation was fully encrypted while the other guy was in the clear. The unencrypted guy was talking about an Army Helicopter that's on a flatbed in pieces and what it would take as a hobbyist to put it back together. :-)

Also, yesterday I heard what sounded like Marin Fire on a new TG 38416 which I added to my master MERA list.

You know if they would only make a serial or USB port available that would probably do the trick or go a long way to solving the situation. I, we, thost of us who are interested could use an external speech synsizer, probably one already built in to our portable notetakers, to "readout" the display, if the info was only available out of a port. I for one, would gladly pay for the add-on synthesizer as was the case in some of the Icom ham rigs. I never owned one because I couldn't put up the required antenna, but played with a couple and they were impressive and were able to give me enough info to control transmit, receive frequencies, mode etc.

Jordan, I do use computer control for my VX5R and it works great to up and download files, but still doesn't give you the requisite information that you need from a scanner such as what frequency it stops on. At least I don' think it does having never used a scanner software program. Jim

Roger,

I've also been hearing a lot of tone testing on TG 00016, which I think is the radio tech talk group. They may be testing equipment for the Tiburon tower. I haven't heard all the new talk groups that you have but I don't monitor Marin as closely as you do either. I imagine there will be a bunch of new talk groups for the south county once the Tiburon tower is up. I had lunch with their SAR coordinator the other day and there will be at least three SAR talk groups added once the Tiburon tower is up, he tells me.

Regards, Jim

Hey Jim,

I've heard nothing but weird tones etc. on TG 16 ever since I started listening to MERA and always just lock it out. I've never heard any voice communications on there at all.

And oh yeah, I hear something new\different on MERA just about every day. It's going to be a long time before it all settles.

-Roger

Thanks, that's great! I have two BC245's and can do likewise with them. for the most part they are accessible. I have never fondled a BC780 but don't think it's digital capable. Far as I have heard, none of those are accessible, too many menus dependent on scrolling until you get to the right icon or words on the display then hitting the any key, or is it the enter key. Well, non-the-less, us blind folks are still being excluded whether unconsciously or not, at least until all devices are built where we can talk to them and they in turn, will talk back to us. Guess I'll just have to get Lexis to make me a "Talking" scanner! Jim

35389. improved scanner access

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-07 07:37:33 UTC
From: Jim Gammon
Topic: 35389 Message: 35389

Last year I wrote to Al Silverberg, President of Uniden and later, to Paul Obitz spelling? around the developing BC246 but it had little effect. I didn't think it would. In the early days of good old Windows, some states told Microsoft they wouldn't buy it unless they made it Accessible to blind and/or disabled computer users. This was after blind computer users had been using very effective Dos screen reader software which of course broke when you installed Windows. And so it continues to be. Almost every new iteration of Windows has necessitated screen reader developers to have to go back to the drawingboard and make their products work with the new version of Windows. And as for Apple mac's?? Well, they had one screen reader developed by a third party vendor, Outspoken, that worked up to I think OS 7, then after that it would no longer work. Last year Apple put out the word to hire some talented programmers to develop a new screen reader for I think it's called Tiger, ther new OS. I think the only reason they did this was out of fear of class action law suits from school districts who remain strong users of Mac's. I haven't heard about the progress of the new screen reader. If scanners fell under the perview of the telecommunications ammendment of 1997, they would have to provide, at the very least, some access hooks to give blind and other disabled users some degree of access to their products. For anyone interested, there is a
way cool cell phone a Nokia 6 something that works on singular that has talking software that gives blind folks access to many of the functions of the phone. It would seem that many folks would or could benefit from this feature so they could operate their cell phones in the dark or, say, after they have been carjacked and are locked in the trunk. Well, I have certainly rambled on and yes I know off topic about this, but if all you scanner buffs woke up tomorrow morning and your displays were suddenly blacked out, believe me, you'd be screaming bloody murder for ACCESS!! OK, enough already! Thanks to those of you who read all this.

Hey, I bet their "outside consultant" was someone I referred them to but nothing ever happened. Uniden was actually willing to send me a BC246 and have some engineering department at U.C. try and make it more accessible. I should have taken them up on their offer and just kept the radio. I guess that was because they knew I work at U.C. Berkeley. I tried to connect them to a CS prof. who was really in to developing better human interfaces for products and had classes where students would develop prototype products to allow more access for disabled people.

Date: 2005-01-07 11:03:03 UTC
From: Robert W. Sanford
Topic: 35406 Message: 35406

FLOOD WATCH IS IN EFFECT FOR FLASH FLOODING TODAY THROUGH SATURDAY

NATIONAL WEATHER SERVICE SAN FRANCISCO CA
235 AM PST FRI JAN 7 2005

...A FLOOD WATCH IS IN EFFECT FOR FLASH FLOODING TODAY THROUGH
SUNDAY FOR SANTA CRUZ AND MONTEREY COUNTIES...

THE NATIONAL WEATHER SERVICE SAN FRANCISCO BAY AREA HAS ISSUED A
FLOOD WATCH FOR FLASH FLOODING AND POSSIBLE MUD AND DEBRIS
FLOWS FOR THE SANTA CRUZ AND SANTA LUCIA MOUNTAINS IN SANTA CRUZ AND
MONTEREY COUNTIES. THE WATCH IS IN EFFECT FROM TODAY THROUGH
SUNDAY.

A SERIES OF STORMS WILL BE AFFECTING CENTRAL CALIFORNIA THROUGH
SUNDAY. RAINFALL TOTALS FOR THE WEEKEND ARE FORECAST TO RANGE FROM 4
TO 8 INCHES IN THE FOOTHILLS AND MOUNTAINS...AND LOCAL TOTALS OF UP
TO 10 INCHES ALONG SOME OF THE GEOGROGRAPHICALLY FAVORED SLOPES.

GIVEN THE LARGE AMOUNTS OF RAIN THAT HAVE ALREADY FALLEN ACROSS
CENTRAL CALIFORNIA DURING THE PAST WEEK...THE ADDITIONAL EXPECTED
RAINFALL HAS THE POTENTIAL TO CAUSE SERIOUS FLOODING PROBLEMS. FLASH
FLOODING IS POSSIBLE ALONG SMALL STREAMS AND IN LOW LYING AREAS.
STREET AND ROADWAY FLOODING IS LIKELY IN THE NORMALLY FLOOD PRONE
AREAS.

RESIDENTS IN AND NEAR THE WATCH AREA SHOULD KEEP A CLOSE WATCH ON THE
WEATHER AND BE PREPARED TO TAKE NECESSARY ACTION IF FLOODING IS
OBSERVED OR A WARNING IS ISSUED.

MUDSLIDES AND DEBRIS FLOWS WILL BE A SIGNIFICANT THREAT WITH THIS
STORM AS WELL. RESIDENTS LIVING ON OR NEAR HILLSIDES OR MOUNTAIN
SLOPES SHOULD BE PREPARED FOR POSSIBLE MUDSLIDES AND DEBRIS FLOWS.

A FLASH FLOOD WATCH MEANS THAT IF WEATHER CONDITIONS CONTINUE TO
DEVELOP AS EXPECTED...FLOODING IS POSSIBLE IN THE WATCH AREA. STAY
TUNED TO NOAA WEATHER RADIO OR YOUR FAVORITE COMMERCIAL MEDIA
SOURCE FOR UPDATES ON THIS SITUATION. CHECK OUR WEB-SITE OFTEN AT:
WWW.WEATHER.GOV/SANFRANCISCO (ALL LOWER CASE).

THE NEXT STATEMENT ON THIS SITUATION CAN BE EXPECTED BY 11 AM
FRIDAY MORNING.

I don't know how you folks in the South Bay are doing but the storm has been a dud up here. As of 0900, we've only had .35 inches of rain and the high wind gust has been 25 mph at 0435. The barometer is amazingly low at 29.29. San Diego is at 29.95 so there should be enough pressure gradient for come pretty strong winds but it all must be south of here or offshore. There's no lowland station in California reporting more than light rain now although Truckee is reporting heavy snow. The radar loop looks less than impressive as well as it looks like some drier air is getting entrained to the north. I don't think this one is going to turn out to be as bad as predicted, at least for those of us north of Santa Cruz.

Regards, Jim

The rain may have been lighter than expected, but there are numerous South Marin road closures due to flooding and a few cars floating around. US1 is closed, usual 101 off ramps at Seminary and elsewhere under water. Miller Road closed in Mill Valley. Etc. There are also a few waves splashing over the bulkhead into the pool area at my apartment at Second and Main, Sausalito.

It hasn't been that bad in San Jose either... Here is a good site
to see info recorded near downtown SJ.

From: Scanner 4
Topic: 35414 Message: 35414

Here in SF it's mostly flooding due to the HIGH TIDE and making it hard to drive around town, I'm more worried about Monday with the HIGHEST TIDES and the rain will make things real bad for the low areas around the bay & coast.
Today is a good day to stay home and work the radios.

Ben which stack of antenna's are not working ???could they blown over ???

That's just high tide effects that happen with almost any storm that occurs near the astronomical high tides. Given the amount of buildup that this storm had, it has dropped suprisingly little rain.

Regards, Jim

Close but no. Ringdowns for cardiac, stroke, trauma alerts and all code three ringdowns are still on 92 Med 9 is now Control 9 and is used for the voice pagers (which suck, minitors three). There are a couple of new tacs and somthing called Baymacs. what that is is beyond me. BLS has switched exclusively to Nextel which also sucks and have been given 800mhz handy talkies but we don't use them unless there is a code three thousand. Oh wait thats gone too. I'm still trying to get an awnser on my alinco question so if you know anybody with ideas sendem my way. Also almost forgot, SCCOM does not do the actual ringdown anymore, its generated from the rig itself which means more work for me. especially if its KSC cause thier shit is always broken anyways adios

highly unlikely..... 2 critical were plumbers working on a gas line , the SCCOFD BC interviewed said they , while not 100 % positive , believed this to be an accident , not terrorist involved. I, too , thought about that once I heard it was a auto dealership. My X-ray friend knows this area WELL and she says the name of it is Los Gatos Auto Mall , not sure if they have hummers , but "fancy" cars is right.

for those just getting home, Channels 3,4,5 and 7 all are there and had video. fire is out.

PIO stated it was two plumbers and leaking natural gas from a commercial
water heater that
found an "ignition source".

Hey Ben,

Actually on cable channel 3 (KNTV 11) they said (speculated) it was 2 plumbers in the attic doing some work and they smelled a strong smell\odor of natural gas. I think they (the plumbers) were warning people to get out when the explosion happened...

This is all unconfirmed.

35433. Idea for blind operation

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-08 02:08:33 UTC
From: Jake H
Topic: 35418 Message: 35433

Hi Jim. Just got an idea that we use at the fire department.

So you know where you are as you're navigating the scanner, program in NOAA Weather freqs at the beginning of each bank or something. Lock them out so they don't scan, but when you're manually moving around the scanner you can hear where you're at. On my 32Ch fire HT, I programmed NOAA on channel 32 so I know to crank the knob until I hear weather, then go 1 click left to be on CDF Local and 1 click right to be on Tact 1 while the radio is in my pocket.

Maybe bank 1 can be channel 1 weather, bank 2 channel 31 and 32 weather, bank 3, channel 51, 52, 53 weather. Different combinations can work so you don't end up having 10 channels of weather for bank 10, but you get the idea.

Just my 2 cents and enjoy the weather down there. Blow it all away so I can enjoy my week long conference trip to MacWorld.

Jake

From: caladded@aol.com
Topic: 35418 Message: 35437

the 246 doesn't have banks as with prior scanners. it has systems and groups.

my system 1 is San Mateo , I then break it into groups i.e. police / fire / CHP

but you can't directy access it like most scanners. my 296 for instance , I can put in 1-2-3 and I get channel 123. won't work with the 246T and probably not the 396 either. you HOLD the scanner on whatever channel and scroll to the desired channel. sounds odd but its done fairly quickly. So Jakes suggestion will not work with these scanners.

I know it's not radio related but.....

A veteran Marin County California Highway Patrol officer is behind a desk this week after his encounter with a 2,600-pound bull on Lakeville Highway on Tuesday afternoon. CHP Officer Patrick Ensley said the bull injured the unidentified officer when he and four ranchers tried to redirect it off the road and back onto a ranch through a 30-foot gate near the Cougar Mountain entrance to Infineon Raceway around 3 p.m. The 4-year-old bull would have none of it. Ensley said the polled, or hornless, bull pivoted, charged the officer and threw him seven feet in the air when it struck him in the torso with its head. The bull then stepped on the officer's lower legs and right hand as the officer was on his knees on the ground. It reentered the pasture by making a new hole in the wooden fence, Ensley said. The officer suffered deep bruising to his legs and hand and has been assigned to limited duties this week, Ensley said. The charging bull was not charged with assault, Ensley said.

That must'a hurt!

Need help from anyone that monitored this incident. I was on scene, but had to split for another incident and failed to get responding units and number of alarms. It was at least two alarms and was on Flora Vista in Santa Clara. Single family residence fully involved.

Any details would be greatly appreciated!

Cheers!!!

Craig

I hapened to be listening to BPD. It was a holdup at a Bank of America. The bad guy left a duffle bag behind that he said was full of explosives he would set off by cell phone if any officers entered the bank within an hour of when he left. They detoured everyone away because they were afraid someone's cell phone might set off the explosives. Last I heard was that the bomb squad was in the bank about 1730 and said there were no explosives. Novel idea on the bad guy's part though since it kept most of the police tied up at the bank scene instead of looking for him.

Regards, Jim

Because there are many modern blasting caps that set to go off when activated by a certain radio frequency. This saves having to run wiring all over the place and is common in quarrying and road construction that requires large cuts. There's also an issue with RF setting off explosives in wired arrays althouogh it's a very unlikely possibility. You can read about how RF affects fire works at http://www.hamradio-online.com/1996/feb/blasting.html .

Why didn't the officer use his patrol vehicle corral it? I know the CHP teaches their officers to use their vehicle for protection. So, wouldn't that have made more sense? I'm just thinking out loud...

This reminds me of a similiar situation I had when working for Caltrans. A coworker and I were patroling our section--I was riding shotgun--when we came upon two bulls fighting on the highway. Fortunately this wasn't a busy stretch of highway, so we just waited them out and remained in our truck. After a few short minutes they pushed themselves back through the fence on the opposite side of the roadway from where they entered.

We used our vehicle to block the opening. True, this ~really~ wouldn't have stopped. But it served as a deterrent. But the main point is: we used property that can easily be replaced if damaged--we DID NOT use our bodies. Our main objective: do the job and go home unhurt at the end of the day.

- Brian

>Why didn't the officer use his patrol vehicle corral it?

Makes one wonder. Back in "the day" we had loose cattle
all the time in a certain rural area I patrolled.

Nothing beats a Large vehicle with a push bar and a 100 watt Unitrol in
their ear to "coax" them
back behind the fence.

It never even REMOTELY crossed my mind to get out of the truck and do it
by hand vs. an 800 Lb. bull

35466. OT- but interesting/ snow rescues in San Bernardino

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-08 18:43:20 UTC
From: KG6VXT
Topic: 35466 Message: 35466

Listening to a VERY interesting rescue operation in San Bernardino
on their System 8 trunk system. ArrowBear.

2 Divisions of snow-cats + snowmobile rescues of 150 trapped people
and 200 trapped vehicles.

Multiple medical calls being evac'd by snowmobile.

Very interesting to listen to.

On the Scannerbuff teamspeak server.
teamspeak.scannerbuff.net:8767

Channel San Bernardino

Lots of communication interoperability problems being discussed.

Late to this thread, but the San Mateo officers associations' Christmas party was on the 19th. The Chief (Alpha 1), captains (other alphas) , lieutenants and sergeants worked the streets for a night to give the rank and file a few hours off.

Jim might be able to correct me on this but I believe Air 1 is used by CHP locally for Air Traffic Patrol.

San Rafael PD handles Terra Linda but Terra Linda was out of the San Rafael City limits when we moved to TL from San Rafael in 1963. They incorporated it in the late 60's early 70's.

Correct. It would have been CHP Air 31 flying out Gnoss Field. Roger probably just heard the designator wrong. Sonoma S.O. has only one aircraft, Henry One, a helo flying out of Sonoma County/Charles M Shultz Airport.

AMA = Against Medical Advice.

Basically means the medics believe the person should be taken to a hospital
(via ambulance at least) but the patient feels otherwise.

Been a while since I read one, but essentially relieves the agency of
responsibility should the person ... well... you know.

Evan

I guess the longer version of that that I've heard is,
"patient declines medical assistance." AMA sure is a lot shorter! <g?

Thanks, Steve

sounds good.. want to help? I'm at a loss because I have asked for help before and people just seem to link me to stuff. Then I read the link and try to figure it out.. I still seem to be on a different page then every one else.. The tag is the 5 digit number correct? Is that what you want posted when the traffic is on a digital system such as MERA? I have programed in all the trucked stuff for MERA and I seem to be hearing every agency fine; however the trucked stuff for SF and Oakland do not work at all.. This is frustrating. I know i heard traffic on those freq I posted.. Help! =\

Thanks

That could be two different things.
(and I could be wrong).

From what I gather: If medics arrive to report of a unconscious person'
and it's simply a transient (or otherwise) person taking a nap, it's a
'patient declines medical assistance' (the medics don't believe the patient
needs to go either). If, however the medics believe the patient SHOULD go
to the hospital, but patient declines, it's a AMA. No AMA is necessary if
the medics don't believe the patient should be transported.

Subject: Re: [bayscan] Re: Marin Explosion?

sounds good.. want to help? I'm at a loss because I have asked for help
before and people just seem to link me to stuff. Then I read the link and
try to figure it out.. I still seem to be on a different page then every
one else.. The tag is the 5 digit number correct? Is that what you want
posted when the traffic is on a digital system such as MERA? I have
programed in all the trucked stuff for MERA and I seem to be hearing every
agency fine; however the trucked stuff for SF and Oakland do not work at
all.. This is frustrating. I know i heard traffic on those freq I posted..
Help! =\

Thanks

35495. CHP extenders

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-09 01:19:44 UTC
From: John Beatty
Topic: 35495 Message: 35495

I was stuck up on Hwy. 50 last week during a 5 hour
closure with nowt to do. I was just searching around
with my dual band. 2m/440 Somebody on the West side
told me about 154.905. It's the CHP mobile extenders
frequency. I was able to here quite a bit of good dreck.
Pretty neat because everywhere I go in the state notwithstanding
the frequency that the CHP is transmitting/ recieveing on, I
can here them (if a unit is close enough)

I'm not sure if this relates or not, but I'm sure somebody here can point me straight. I heard a call today from MGH that a patient was leaving the emergency room against the order of a doctor. They were dispatching Twin cities and the Sherriff (I think that the code was 647F). I was under the impression that unless you were under arrest you were free to leave a hospital anytime you wished? Reguardless of what anyone else thought.

Am I mistaken?

Yup. My dual band mobile has that frequency in it too as I don't have a scanner. Usually I'm lucky if I get a mile or so, but beggers can't be choosers. :)

There are two things you will hear. They mean different things are different counties because each county EMS does its own thing. (Which by the way makes no sense at all but that's a different soap box.)

AMA = Against Medical Advice This means the paramedic feels the person should be transported to the hospital however the patient does not want to go and refuses medical transport. In order to do this the patient MUST be alert and oriented X 4. This means they must be able to answer 4 simple questions.

Example: Whets your name, Age, City you live in, who is the president of the USA?

RAS = Release at Scene this is for people who did not call 9-1-1 for them self and/or have no medical complaint. This makes them a "non-patient." Non patients still have to sign this form stating we arrived and they did not need our services. This form is used in some counties for patients who have an injury but the paramedics do NOT think they need to be transported via ambulance. Example: Cut to the finger. Person with toe pain.

I hope I did not just confuse you all now =)

I would link you to the policy online but the Santa Clara EMS web site appears to be down at the moment.

I guess the longer version of that that I've heard is,
"patient declines medical assistance." AMA sure is a lot shorter! <g?

I also heard that the CHP installed repeaters throughout the area, as coverage seems to be better. One of the most comprehensive CHP frequency lists I have found on the web is at: http://www.scancal.org/chp/freq.html I have all the bay area frequencies in one group and ALL frequencies in another in my BC246T. That way I only scan the local stuff when I'm around here and switch to all frequencies when I travel. Monitoring their frequencies clued me into a fixed wing working on the other side of a hill on a trip up I-5 several years ago. Nothing like hearing something like, "it's the red honda passing the u-haul truck now" and then cresting the hill to see three CHP cars on the side of the road and SEEING the red honda! <g>

647(f) is the penal code section for being under the influence of alcohol or drugs. 647(g) allows a peace officer to take a person suspected of being guilty of 647(f) into civil protective custody and transport the suspect to a treatment facility for a 72 hour evaluation. I assume the staff at MGH thought this person was too much under the influence to care for himself so they were asking the police to take him into custody under PC 647(g).

From what I have been taught the patient must be conscious, to sign an AMA form, meaning that fire and AMR (usually) released from any medical advise this is expressed consent, now if the patient is unconscious then its implied consent, meaning that medics has every right to transport, only medics can do AMA, EMT's Can't. then there is all this things about minors being transported and parents have to give consent to transport.

EMT's can certainly do AMA's... Not everything is an ALS call. Not all fd's have paramedics on them. Its is common practice for fire to cancel AMR and do an AMA at the scene...

Thats right about common practice, but EMT's cannot do
AMA's only Medics,

What emt's can do is for patients that refuse service,
that applies to those persons who are refusing ALL EMS
services INCLUDING assessment and transportations.

Refusal of care applies to patients who by DIRECT
examation, MOI, or by initating a patient relationship
by 911.

here is the ALCO Protocals #8040.

http://www.co.alameda.ca.us/PublicHealth/organization/divisions/ems/Resource_policy_manual

That may be county by county. I know in Santa Clara County FD's AMA patients - and they are EMT's.

so its new right ? the scanner is excellant , I own TWO of
them AND a BC296 (same scanner = handheld)

the mistake most people make when programming is they DON'T set up the
bank as a trunked frequency . go over it again and DO NOT skip any steps , do it
slowly and it will work for you. its a great scanner.

I did hear a shooting mentioned , not sure if its what you saw, didn't catch
location.

Just got back from this 3-alarm incident. Images to follow (nothing too exciting due to late arrival).

This was a 3-alarm warehouse fire at the Santa Clara Nut Company located at 1590 Little Orchard. IC called incident under control at 0846 hours on January 9, 2005.

There were multiple safety concerns including the presence of at least one drum of methyl bromide - a commonly used pesticide - that was not breached. Second major safety concern was a large HVAC unit on the roof of the warehouse that threatened to collapse as the roof had been compromised. Finally, downed electrical wires posed a major safety concern.

Units responding included Engine 30, Engine 7, Engine 6, Engine 3, Truck 1, Truck 3, Truck 4, Truck 18, Battalion 29, Battalion 2, etc.

I missed most of the action due to a relatively late night and missing a phone call because I simply couldn't get my sleepy rear out of bed! ;^)

Want to see some pics? Nothing amazing, but gives an idea of the conditions and the structure...let me know!

35518. Marin police action yesterday

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-09 18:48:45 UTC
From: Roger Strohmeyer
Topic: 35518 Message: 35518

http://www.marinij.com/Stories/0,1413,234~24407~2643949,00.html

Two teenage suspects were arrested yesterday for their role in a Novato attempted robbery after they barreled through a roadblock and drew fire from police, touching off a car chase before more than 60 officers hunted them down in a San Rafael neighborhood, authorities said.
The incident began at 9:10 a.m. when police said one of the suspects pulled a knife on a 25-year-old woman in the parking lot of Safeway at 470 Ignacio Blvd., police said.

Police said the suspects fled empty-handed before the victim responded. Police declined to release the victim's identity, citing privacy issues.

A witness to the robbery summoned police and followed the two suspects riding in a white Ford pickup truck over the Ignacio Boulevard Highway 101 overpass to Nave Drive and onto Marin Valley Drive, where Novato police officers had a roadblock set up.

The suspects evaded police, hitting the witness's vehicle and veering toward a Novato police officer as they drove around the roadblock, police said. The officer, who police declined to identify, drew his gun and fired two rounds at the truck. No one was injured in the incident.

Police alerted local law enforcement agencies, including the California Highway Patrol, the Marin County Sheriff's office and the Tiburon and San Rafael police departments.

The suspects then fled southbound on Highway 101, where a CHP officer spotted them and gave pursuit off the Manuel T. Freitas Parkway exit. The two suspects pulled over on the 400 block of Hickory Lane in Terra Linda and fled on foot, San Rafael police spokeswoman Margo Rohrbacher said.

A total of 65 officers from various agencies cordoned off the area around Hickory Lane as SWAT teams by fanned out in the normally sleepy neighborhood, Rohrbacher said. A Marin County sheriff's airplane also was used in the search, she said.

During the three-hour manhunt, the Marin County Office of Emergency Services left residents automated telephone messages to stay in their homes for safety while police looked for the suspects, who they said were armed and dangerous, Rohr-bacher said.

Tom Charlton, a retired iron worker who lives at 309 Holly Drive with his wife, Nancy, said he heeded police warnings to stay indoors during the search, which was unprecedented during his seven years living in the area.

"I felt pretty safe because there was an awful lot of police activity in the area," he said. "I don't think the suspects had much of a chance."

Police found one suspect hiding in a shed at 412 Hickory Lane at about 12:15 p.m.; the second suspect was found hiding in a boat on a trailer parked in the driveway at 451 Hibiscus Way nearly an hour later, police said.

The suspects were identified as Juan Sanchez, 18, of Alviso, near San Jose, and a 17-year-old boy police declined to identify.

Sanchez was arrested on suspicion of attempted robbery and assault with a deadly weapon, said Novato Police Lt. Jim Laveroni.

Both Sanchez and his accomplice were arrested on suspicion of resisting arrest and possession of a stolen vehicle, Laveroni added.

Sanchez was booked into Marin County jail, where he was held in lieu of $50,000 bail. He will be arraigned in Marin County Superior Court on Monday.

Details were not immediately available yesterday on the bail amount and arraignment date for the 17-year-old, who was booked into Marin County Juvenile Hall.

Man I was just out riding around to check out the high tides and MAN its flooded in Marin.

The helicopter pad area known as the Manzanita lot is COMPLETELY FLOODED, there were people going by in rowboats where the roadway and traffic normally are!!

I dont know if I have time to take pics but Im sure you will see it on the news tonight.

might be a fixed wing they only used as needed. San Mateo has one they use off and on.....narcotics uses it from time to time , but its not something up day to day like the CHP stuff , H1 in Sonoma , Air 2 or Star 1 in San Jose / Santa Clara etc etc

Roger,

It could have been. Marin has a reserve aero squadron and their designators are Air (Number). I'm suprised they could one in the air so quickly but the aero squadron may have been on some type of training at Gnoss Field and so were available immediately.

Regards, Jim

Ed and others that may be interested...

Here are images from this morning's 3-alarm fire in San José.

http://www.andromedafilms.com/carosephoto/emergency/fire/orchard/orchard.htm

Let me know if y'all have any questions...

Cheers!

CRAIG

Well, no flames and smoke......but you (as usual) have some nice shots.................notice the words "Franklin Engine" on E3s rig...........any ideas of the significance of that?

San Jose changed to Black turnouts awhile back , but no ALL have switched.
Beige was the old color.....as far as greenish ?? they also switched to
the Cairns helmets , so they look a lot like SFFD

You also have White (in SF and most depts) for Chiefs and SF has Yellow
turnouts for the Reserves.

Topic: 35532 Message: 35532

oh..........just looked again , ,,,,,,,,,,,the " greenish" colors
simply look to me like the beige turnouts that are very wet. our (reserves)
yellow turnouts would get fairly dark when soaked (but you felt great !!) LOL

trust me , it doesn't have to be raining to get them
soaked,,,,,,,,,happened to me plenty of times , especially working right underneath ladder
pipes !!!

Yup, like I said, I missed the phone call while sawing logs and missed what I was told was a real rager...oh well.

As for E3 - I will track that one down for ya, Ed. I was wondering the very same thing even though I've seen it a number of times.

Glad you like some of the shots...although they're mostly "people" shots.

Cheers!

unlike most fires today,,,,,,,,,,I noticed they dropped a lot of lines on this one, looked more like the old fires back in my SFFD days , when we picked up what seemed like MILES of hose.

looks like T3 and T18 were running ladder pipes

people shots are some of the best shots.

I always advise my family to get to the hospital on their own for minor injuries and avoid money grubbing AMR if at all possible quick ride can cost more than $2000 and they can stuff the form I do not have to sign anything just because some lawyer wants to cover his ass..

ED -

Here's an "unpublished" shot of T1 fully extended -

http://www.andromedafilms.com/carosephoto/emergency/fire/orchard/images/orch
ard_021.jpg

Indeed, there was a whole lot of hose dropped by the time I got there.

My ride via Palo Alto FD was $900, IIRC. Granted, 10 years ago I think -
night rate and code 3 rate.

But if the Fire department is called and they believe you should go to the
hospital, and you say no, I think you'll find yourself signing that form...

Or riding to the hospital with metal bracelets.

Evan

ED -

Haven't heard anything official as of late...but have you had the opportunity to drive by Station 1 the past couple of weeks? Not sure if it's already been repaired, but some unintentional contact was made between apparatus and structure, if you get my drift. I wonder how cold it was in the doghouse... ;^)

Hey, would you do the group a favor - for those that are interested, and explain the term 'tiller' as it relates to aerials. Some folks might not have a clear picture in their minds.

Thanks!

Unless you are in a mental capacity that you can not make that decision
for yourself or you are a threat to yourseld or others. You can
absolutely go AMA and they can't do a thing..

That is absoulute B.S. No one can force you to sign a form that grants AMR some sort of immunity from lawsuits I think you are like too many other Americans today scared of the system and goose stepping in fright of big brother.
AMR is private company trying to make a buck every way it can and destroying small providers and driving up the cost of health care at the same time AMR is BAD for America and should be broken up like the Bell system was.
If they force me to sign or ride They will have to get a cop to arrest me first and then face a huge lawsuit and what would the arrest be for? Failure to follow company policy?.
Ambulances,ALS,EMT's, etc should be provided under state law by the local Fire Dept's at real cost without profit margin.

you can't be forced to sign. they simply make a note that you refused.

but I agree , goverment should handle ambulances , preferably Fire Depts.
it would help lower the ridiculous health care cost

AMR charged Kaiser 1100.00 for my short trip and a BLS ambulance
could have handled it , although I had chest pains so it was smart to have an ALS
rig do the transport ,,,,,,could have been my heart.

Santa Clara FF/Paramedics are the ones who took care of me.

Sure .... a Tiller-type Aerial truck is one with a fire fighter who " steers" the rear wheels. Makes the rig more maneuverable. while there are newer trucks with " rear wheel " steering , the " Tillerman" helps a lot by helping to guide the rig thru congested streets , small alleys etc etc

All of SFFD Trucks are Tillers , As most if not all of Oakland and Alameda Counties are. Fremonts trucks are tillers as are Redwood City, South County (Belmont-S.Carlos) Foster City , San Mateo , Santa Clara City, San Bruno.

to name just a few.

Craig........don't you have a shot of Santa Clara City Truck 10 ?

I understand that a lot of that revenue AMR receives goes to political payoffs there has been attempts in the past to legislate local government medical transport but they always die in the legislature.
Relative of mine was the Fire Chief of a major bay area city and advocated Fire ambulance companies but could not get anywhere AMR is always a major political contributor the second the subject come up in a locality and always claims to be more cost efficient and cheaper for the cities and counties, And because of start up cost etc they are always hesitant these days because of tight budgets.
It will take a grass roots effort when people get upset enough about spiraling cost to ever get the necessary legislation mandating local government transport.
Once people realize that 90% of Fire Dept calls are medical anyhow it starts to make even more sense to stop duplicating services.
Right now would be a good time to start reviving this subject again because there is a lot of Homeland security grant money available for this sort of thing.
Anyhow this will probably be my last word on the subject before the Flames start erupting about being off subject

A little update on AMR from Hoover's -

If you've fallen and can't get up, alert American Medical Response (AMR), a subsidiary of Laidlaw. With more than 4,000 vehicles in more than 30 states, AMR is equipped to respond to all kinds of requests. AMR is a major provider of emergency and non-emergency ambulance services (the latter include critical care transportation for medically unstable patients and such non-medical transport services as transfers to and from health care facilities.) AMR serves about 4 million patients per year. The company also maintains one of Nation's largest databases of emergency and non-emergency pre-care information that is used to develop new procedures for hospital pre-care. AMR is being acquired by Onex.

That last part about Onex, if anyone cares, reads like this...

Is Onex a shopaholic? The investment firm has interests in companies in about half a dozen business sectors. Key segments include electronic manufacturing services and auto products; its holdings include ClientLogic (customer service management) and Celestica (electronics manufacturer). The company bought troubled theater chain Loews Cineplex in 2002, selling it in mid-2004 to a group of investors led by Bain Capital and the Carlyle Group. It also owns 24% of beleaguered healthcare firm Magellan Health Services, which it helped bail out of Chapter 11. Onex is also active in investment funds and partnerships. Chairman and CEO Gerald Schwartz controls more than half of the voting shares of Onex.

Onex is a Canadian LBO firm...

-C-

It's about halfway down this page:

http://www.firedispatch.com/gallery1001.asp

It's from South County (Belmont/San Carlos) Truck 13 as they responded to a
2nd alarm in Redwood City.

yeah, that was on firedispatch.com , it was South County Truck 13
.....think the link is gone now.

btw (craig , you didn't catch my goof) Santa Clara T2 is NOT a tiller

FDNY has the biggest number of Truck(ladder) rigs around 140 total , some
are tillers , some mid-mount (like SJFD T3) some rear mount (like SJFD T4)
some are tower ladders (like SJFD T1 and T29 ---- have buckets for fire
fighters.....but Aerial ladders are better for rescue)

might be slightly off topic , but we all are paying for the rip-offs. Some of the ambulance companies , probably AMR included since they are number Uno.....charge HMOs for paramedic/ALS services while in reality the ALS stuff is done by the fire dept people and the ambulance transports ONLY. its a rip off

When Ben is right, they can be made to run without a tiller, that is only done by mechanics working on the rigs.

SFFD T2 got out of its house in error once without a tillerman (lot of questions arose of "HOW" could that happen and a pedestrian was run over and killed.....several years ago, wonder how much the city paid out for that goof.

SFFD T1 also had a tillerman error (rookie) that lost control several years ago and the rear of the rig ran over a streetcar island hitting several and I believe killed about 3 .....back in the 70s.....

But those are only 2 incidents out of thousands and thousands of responses, the guys in SF are darn good with those things, I have seen some amazing driving and spotting of the rigs for aerial operations.

like FD paramedics do all the ALS and the AMR (other
other ambulance companies) do the tranport. there are cases , documented case
firehouse.com has reported where ambulance companies have charged for ALS and
ONLY BLS people were on the rigs.....that should be FRAUD. your paying
double, Once thru taxes paying for the ALS trained FFs and another time thru
your medical coverage that pays for the ambulance crew.

Statements are now being taken, four officers fired on the suspect in the alley. The suspect had been barricaded in a home near the liquor store. The suspect fired an assault weapon (KCRA 3 report) at the two Ceres officers who responded to the 211 P.C. (Armed Robbery) at George?s Liquors on the corner of Caswell and Central approximately 20:00 hrs. Sunday 1-10-05, both officers were reported to be in critical condition and being treated at Doctor?s Medical Center, Modesto and Memorial Medical Center, Modesto.

Agencies that responded were Stanislaus County SO, Modesto PD, CHP, and Turlock PD. Agency communications were on VHF High as Ceres PD using a trunked system they share with Turlock PD. Modesto PD uses UHF. The SO took over all communications.

From my recollection and I can ask some of my friends back home on the FDNY but the only mid-mount trucks on the roster are the Tower ladders, all of the regular trucks are either Tillers or rear mounts.

I did find it interesting that SFFD only runs tillers, I was wondering if Oakland does the same.

To keep this scanner related I am addicted to the SFFD link on firefeeds.

Here is a story about that shooting in San Rafael:

POSTED: 2:50 pm PST January 9, 2005

SAN RAFAEL -- Two male teenagers were shot Sunday morning while walking down a street together in San Rafael's Canal District, a San Rafael Police spokeswoman said.

The victims, ages 14 and 19, were in front of 125 Larkspur St. around 11:10 a.m. when they were allegedly shot by a man who fled in a minivan, police spokeswoman Margo Rohrbacher.

The 19-year-old was being treated for a serious wound and the juvenile was being treated for injuries that are not believed to be life threatening, according to Rohrbacher.

Both are victims were at Marin General Hospital, police said.

The suspect was described as a Hispanic man who at the time of the shooting was wearing a black beanie cap. He fled in a gray minivan that contained four to five other passengers, also believed to be Hispanic males, according to Rohrbacher.

Anyone with information on the suspect's whereabouts is asked to call San Rafael Police at (415) 485-3000 or the Crime Stoppers tip line at (408) 947-STOP.

Police have not yet determined a motive for the shooting and are still at the scene investigating the incident, Rohrbacher said.

I'm fascinated by why you bothered to give the AMR Paramedic's name. I don't see how it's relevent to anything, so the only 'reason' I can think of it that it's an effort to somehow 'show-off' that through great mystical powers or intelligence, you happened to recognize a voice or medic callsign.

But then, you show how silly you are by asking *us* idiots if the guy is dead! Seems to me that death would mitigate the need to do an EKG, but maybe things are different on your planet, Darrin.

Alameda County residents push to form new city

By Thaai Walker

Mercury News

It was bad enough having to put up with the dearth of dress shops and banks. But when the seven medicinal marijuana clinics came to the area, Kathie Ready decided she'd had just about enough of living in unincorporated Alameda County.

Ready has lived in San Lorenzo, south of Oakland, for 39 years. It's a community, not a city. Being governed by Alameda County, she believes, has meant too many of the things she and her neighbors don't want and too few of the things they do.

Her solution: Cut the county apron strings and become an actual city with a government of its own.

She and like-minded others in San Lorenzo, Ashland and Cherryland believe it's time for the three communities to unite and incorporate. Together, they have a population of about 70,000 in about 7.3 square miles.

The new city, wedged between San Leandro, Hayward and unincorporated Castro Valley, would be called San Lorenzo.

So far, the Committee to Incorporate San Lorenzo has about two dozen members, including Ready. Its headquarters is in Ashland resident Richard Hancocks' living room. But the few hope to persuade the many to come around.

If they do, San Lorenzo would become Alameda County's 15th city and its first to incorporate since Dublin in 1982.

Later this month, the San Lorenzo committee will start gathering 6,000 signatures on a petition to the county's Local Agency Formation Commission, which oversees incorporations and annexations.

Lengthy and expensive hearings would follow. If the proposal weathers that process, it must go before voters in the three communities for final approval. Residents elsewhere in Alameda County would not vote on the new city.

The last Alameda County area to attempt incorporation was Castro Valley, whose voters refused the idea in 2002.

But those favoring San Lorenzo's incorporation say their small but densely populated communities have languished.

It was 39 years ago that Ready and her husband-to-be went on a Sunday drive through San Lorenzo's winding sycamore-lined streets and thought it was one of the prettiest places they'd ever seen. They used $1,700 they'd saved for a Hawaiian honeymoon as a down payment on a little house with gray shutters. They've never made it to Hawaii, but they raised two girls in that house, and Ready can't think of anyplace else she'd rather live.

Even so, she bridles at the fact that none of the three communities has any viable retail areas. Only one, San Lorenzo, has a supermarket. And in Cherryland, where cherry orchard king William Meek was said to have created the Bing variety, many of the streets lack sidewalks.

Instead, incorporation advocates lament, the communities have been given more than their share of low-income housing and halfway houses for wayward teens and ex-cons. Those seven marijuana clinics sprouted in a two-mile area after being locked out of neighboring cities whose councils had developed ordinances to control the clinics' proliferation.

``Most of the county supervisors live in Oakland and Berkeley or on the other side of the hills,'' said Cherryland resident Ron Palmeri. ``Most of the county's resources go out to Livermore and Castro Valley. And here, it's like, `Do you need more low-income housing?' ''

Residents credit county Supervisor Alice Lai-Bitker, whose district includes San Lorenzo and Ashland, with doing her best. But even she agrees that the county board is consumed by larger issues.

``I think their feelings are fair,'' said Lai-Bitker, who supports incorporation.

Incorporation advocates said they realize becoming a city won't be a cure-all -- after all, cities have problems of their own.

``But,'' Ready said, ``at least we'd be able to blame ourselves for the failures.''

I don't think I've ever owned an Alinco. A friend of myne had a Alinco scanner once, then one day I asked him about it, he said he gave it to a friend. Said it was the third Alinco he had owned, they all sucked, and he'd never buy another Alinco again.

That's his experience.. I'd still want to see for myself, but maybe not buying one - in store. :)

BREAKING NEWS: Ceres officer dies from injuries

By Debbie Noda/ The Modesto Bee

Members of the Stanislaus County Sheriff's Department S.W.A.T. team prepare to search an area where a shootout occurred between deputies and a man Sunday evening. One officer died as a result of his injuries, and another remains in critical condition.
By Debbie Noda/ The Modesto Bee

HYPERLINK
"mailto:metro@...?subject=BREAKING%20NEWS:%20Ceres%20officer%20dies%20fro
m%20injuries%20"
BY PATRICK GIBLIN
BEE STAFF WRITER

Last Updated: January 10, 2005, 09:59:19 AM PST

One of the two officers shot in a gun battle Sunday night has died.

Ceres Police Sgt. Howard Stevenson died from his injuries at an area hospital, a spokesman for the Stanislaus County Sheriff?s Department said this morning.

Officer Sam Ryno was listed in critical condition at an area hospital Monday morning. Both men had been shot several times with an automatic rifle.

Three hours after the shooting, police shot the suspect when they found him behind a nearby home. His name and condition were not released this morning.

The officers responded to a call made by an employee at George?s Liquors on Caswell Avenue at 8:07 p.m. Sunday. The employee told emergency dispatchers that a man holding a rifle and acting crazy had just left the store and was walking down the street.

Gunfire erupted shortly after police arrived. Both officers had been shot several times, Modesto police spokesman Rick Applegate said late Sunday night. The officers also exchanged gunfire with the suspect before he fled. Witnesses told police the suspect ducked into a home on Caswell Avenue about two blocks from the liquor store.

Officers from the Ceres, Modesto, Turlock and Newman police departments as well as the Stanislaus and Merced Sheriff?s offices and the California Highway Patrol responded.

Nearly one square mile of the city?s roads were closed as a California Highway Patrol helicopter hovered overhead and police officers and SWAT teams took positions around the home. Police officers shot out street lights to diminish the suspects vision, Applegate said.

"We can?t have a city employee turn off the lights because in order to do that, he would have put himself in harm?s way and in the line of fire of the suspect," he said Sunday night.

At first, residents in the area were told to lock their doors and turn off their lights. Then about 10 p.m., officers began evacuating homes.

At about 11:30 p.m., the suspect was spotted behind the home. Applegate said the suspect "initiated a gunfight." The suspect was shot in the alley. His name or condition were not available early this morning.

Both officers have been members of the Ceres police department for several years.

The streets around the area of both shootings were still closed today.

Parents of students at Caswell Elementary School, one block north of the shooting, were told to drop their children off in front of the school Monday morning.

For the complete story, see tomorrow's Bee or www.modbee.com.

Roger, you are correct about San Rafael's AM shooting. One victim was shot in the stomach and one was shot in the leg. Neither of then died. Last night San Rafael gang officers saw the suspect vehicle with the three suspects pull up to a house they were watching and go inside. They called it in and were sitting tight when the suspects exited the house and got back in their car and left. Marked units attempted to make the stop. There was a short vehicle chase which ended near the dead end when the suspects stopped and foot bailed. One was caught while going over a fence the other two got away while being chased. PD set up a perimeter and called for San Rafael SWAT and Marin SO SWAT. SWAT teams set up and the SO's SWAT communications rig was set up with tactical command dispatchers. SWAT teams were unsuccessful in locating the two outstanding suspects. They were later identified as known gang members from Salinas.

With all the group traffic about MERA, ALCO, San Francisco, and other trunked radio systems, I've wondered what monitoring opportunities there are in San Jose for trunked systems and/or P25 encoded systems. I am mobile with a 796D; around town I can pickup:

SJPD 17 (MERGE) non-trunked, P25

SCC SO - non-trunked, some channels P25

San Jose Airport TSA - non-trunked, P25

City of Santa Clara - everything trunked but analog

I don't know of any other public safety agencies down here that are trunked and/or use P25.

There do seem to be a few commercial trunked radio systems in the 800/900 MHz ranges--anything worth checking out? Does the 796D work with these systems?

-Johnathan

Huh? An unicorporated are is not a city - you're dependant on the county for services and more importantly planning which is what caused our big push to incorporate Castro Valley a couple of years ago.

About half of all governmental services are NOT provided by Incorporated Cities or towns. State Laws permit "Service Districts", which are incorporated to serve the genreal public and to provide just about any type of service needed. Water, Sewer, School, Fire, Police Protection, Hospital. You name it --- Any formal request for city incorporation is first reviewed to see if the area or community should be incorporated. You do not need to be a city to apply for an FCC radio license. In fact all FM and TV stations are assigned to serve a "Community" . It does not have to be an incorporated city or town.

Ok let me correct my statement.. nothing would change in San Lorenzo if the became a city. Fire would still be with alco and pd would still be ACSO... too small of a "town" to do anything else when they have everything good right now

According to CNN's website - there is a county in California called "Canyon County" - anyone familiar with that one? ;^)

The front page shows an image of a home being swept into a river in the southland and it's captioned "A home is washed away in Canyon County, California."

++++sigh++++

So much for accuracy...

Oh, boy, are you ever wrong, I have lived in San
Lorenzo my entire life. We are NOT a city, we have NO
city government, no city services and are subject to
the whims of the county and LAFCO. Cherryland and
Ashland are exactly the same. I suggest you look up
the LEGAL definitions of a city (or a town, like Los Gatos).

35606. Re: [bayscan] Somewhat OT, New City trying to form in ALCO

Yahoo group: bayscan (2005-01 — 2005-05)

This is also incorrect. Those decisions are made by the CITY GOVERNMENT. For examples, look at Isleton. It has a population of about 4000, but has it's own fire department and police department, as does Rio Vista. There is NOTHING that precludes a small city from having their own police and fire. Those decisions are made by the elected government. Budget issues, MAY make it more cost effective to contract those services out, but many of us who live in these communities would push to throw out ASO and have our own police agency. Fire DOES make sense to leave with AlCo.

If we are to really, really nitpicking, it's not an abbreviation - it is rather an acronym.

1. Acronym - a word (as NATO,) formed from the initial letter or letters of each of the successive parts or major parts of a compound term.

2. SWAT - Special Weapons and Tactics

3. Abbreviation - Shortened form of a word.

The above was offered in the hopes of lightening the mood on the list - it's just for fun...

Cheers! :^)

For those who bothered to comment and chastise me for my messages regarding the shooting in Ceres last night. Ed believes I need to use more discretion in mentioning names and locations; I mentioned that a SWAT team was searching on Beachwood and at an on-duty MPD officer?s home. I did not mention the address in my e-mail; the home in question was not on Beachwood and yes I did have the address. Why would I have such information? I lived in Ceres for 10 years; my parents also live in Ceres. I have many friends who work for Ceres PD, Modesto PD, Stanislaus County Sheriff?s office, the local fire departments and even AMR. In response to Ed?s and Tim?s complaint that I mentioned the paramedics name; the SWAT member asked over the radio for Daryl Albino by name to approach with the EKG monitor. Daryl is a friend of mine and someone who I used to dispatch on calls while we worked together at AMR.

As for the words in my e-mail ?Is he dead?? I see that I typed that. I probably meant to add to that and instead sent the e-mail as it was. Sorry Tim no mystical powers here, the central valley is a different place; however, it is located on the same planet as the bay area and just 90 miles southeast of San Francisco. Bay area scanner listeners would probably be surprised to hear the common use of names by officers, firefighters, and paramedics on the radio waves.

Boulrog mentions that SWAT is to be represented in all capital letters as it is an acronym; I am sorry I missed that when I spell checked my e-mail message and missed it when I proofread my message; to think of the gross error I made by not capitalizing all of the letters. I see more complaints from users on discussion boards for others who ?Shout? in all capital letters yet nothing when writers use nothing but lowercase letters, no punctuation, misspelled words, and zero grammar. To think I missed capitalizing three letters and the e-mail started posting.

I am angry, no. My intent was to post what information I had, the frequencies being used, and the agencies that were on-scene all for those who take a much more active role in listening and could tune their yagi antennas in the direction of the valley and listen in. I use an indoor antenna and I do not have my 780 set up to feed the audio to my PC.

Huh. Not sure how they would have found out in this case.

> And yes if any helo is landing for any type of an EMERGENCY
> I would think that the local FD would be there has well as PD

I don't think they "declared an emergency" -- I just heard the chit-chat between them and another one in the area. It sounded like maybe something came loose and thwacked the windscreen on the right hand side. He called it a "precautionary" landing, to sort of take a look around, and didn't ask the other guy to do anything other than 'cover' -- once they were on the ground, the one in the air radio'd to SanFranAir where they were and to expect a call on the cell phone from them.

SAN JOSE ENGINE 27 now requesting a full rescue response for three patients with one trapped in the overturned vehicle and all suffering from moderate injuries.

Overturned vehicle on right-hand shoulder is carrying biohazard waste. BATTALION 13 requests HIT TEAM respond CODE-2 at this time.

Depends on your primary frequency use. What are you mainly looking to listen to? I have a mag mount antenna, just let me know what frequency you primarily listen to and I can put something together for you. I have about a dozen antennas, mainly Larsen.

>Btw I'm on Med 7 tonight. Evan you better post my good calls.

You just jinxed yourself. No calls for you.

Or wait... All medicals. :)

>I hope this rain lets up. Running an MVA would not be fun right now. I

Naw, the med units here are usually only on scene for about 2-3 minutes.

And whoever's been running med 7 today has been confused.
"Med 8 responding... err med 7." ... "Med 8 on sc... err med 7 on scene."
"Med 8 bac.. err med 7 back in quarters."
(Or was it med 7 / 8? He confused me too!"

101 IC requesting TRUCK COMPANY 18 work the overturn.

BATTALION 13 now requesting CHP close NB 101 at Bailey. Again, this is NB
101 after Bailey.

HIT 29 A & B are responding to this incident for the biohazard.

If I'm not mistaken SF and Marin are 400 & 800 megz? That's who will be listening to most. mag mount is obviously for car. You have antenna for your house?

Yes the medic who was on Med7 today was on over time. He normally works Med 8. =) Your observation skills are on fire today.

And with my luck AMR will be working another MVA like the one in San Jose right now and they will have a delayed response to my MVA. Oh yea.. And then I will look like a rat lol.

What SJ Engine did I miss Craig .....E27 County E12 plus ??

asking for a STARCAR .....?? they have Rescue / Medic 18 which is one ,
maybe they want another .. sending Rescue / Medic 2

btw . Rescue/ Medic 2 is new , they switched their light unit with 29

some of you may have noticed , the Rescue/Medic units are rolling on MORE
calls now.....that is because of the closure of San Jose hospital.

They rolled Engine 12, then cancelled after Battalion 13 did his assessment.

Still rolling HAZMAT for a bunch of "blood products" that were being carried by one of the vehicles.

RESCUE MEDIC 18 did roll on this incident with the Truck. This sounds like it's wrapping up now with three AMR rigs being used for transport.

You mentioned the Rescue/Medic units rolling more - definitely noticing an increase in their use.

BTW - detail just called under control by Battalion 13. HIT 29 is still 5-10 minutes out to deal with the "blood products".

SF is 800. Don't know about Marin. I believe 800. I have a Yagi, you'd need a cable for it, but we can talk off list about that. It's a 7 element I think. You'd need to aim it to where your primary area is.

Most of CALSTAR's pilots are also ex-vietnam pilots. It's more a matter of safety. I'm not saying it's bad to take a call, but often it's safer to NOT take a call. If you have a hard enough time flying in, it's going to be even harder to fly out. And then you're not only endangering the life of the 3 crew members, but also a patient.

I personally feel out of respect for the officers, I personally won't post the exact location of a SWAT incident. I may post "<City> working a SWAT detail on XXX.XXXX Frequency" but that would be it.

Not that it would be like the subject wouldn't know SWAT was moving in on his location (I mean come on - most swat activities that you hear over the air are because of incidents - i.e. a person just stabbed someone than ran into his house). So this person already knows SWAT is there - sirens, big vans, etc. I seriously doubt there's a incident where the guy is surprised that PD is breaking down his door. But still, I won't do it.

But come on, regardless, by the time you posted "SWAT Entry Team Alpha about to make entry", and Yahoo sends it out to the list, Entry Team Alpha is back at the station recapping what happened. :)

That's right Evan. I ONLY post location, IF I can tell by listening to it I KNOW the perp KNOWS the cops are there. You noticed my first post even had the city wrong.

IPN guidelines, which I "kind of" go by here also, don't allow the address to show up on the page, although there is a way around it AND I have seen on of the owners of IPN actually violate the rule himself, so its kind of hypocritical of them to do that.

Common sense should prevail, although I know not everyone has that.

Swat Callout in a retirement home? Does anyone really think these people are here on Bayscan? Well, ya never know..... Still, some discretion is needed, you can't really assume a lot as NOT everything come over the radio.

I stand 100% behind my statements in regard to the Ceres incident.

omg! 1 hour does suck.. what sucks more is that it is 11:25 and AMR 927 just advised they are STILL on scene. 927 is going to transport the patient down the hill to Cal Star. Med 91 advised them to call when they are 5 min. from Cal Stars landing pad. Cal Star will then evaluate if they can fly the patient to San Jose (VMC).

If it goes out over the radio and is not scrambled, why not post it? All SWAT teams that I am familiar with have encrypted coms. It is not as if radio traffic is where we share privileged information. We now have mobile data terminals, two way paging, cell phones, Nextel, satellite, encrypted radios and many more means of which to communicate without the worry of a bad guy with a scanner listening in. It's a real stretch of the imagination to think that Bayscan is being monitored by anyone involved in any criminal high stress or tactical situation. With our other means of communications in the field, very little of what goes on is actually transmitted over our two way radios. All sensitive information is handled through cell, Nextel, MDT, or two way pager. Go ahead and post anything you feel tells a clear story and update of events that you heard on your scanner. Scanning is a fun hobby and if it was broadcasted over the radio, it's just fine to share that with the Bayscan group.

Having just gotten back from soaked SoCal, I agree with Mike -
It was Canyon Country. I suspect it was a typo that no one at CNN caught.

I have found that 'localisms' are often mis-understood by those not
familliar with the lingo (Somewhere I have an award certificate from the
American Radio Relay League for some work I did 25+ years ago on an
incident in eastern San Diego County. When one is in the urban coastal
area of San Diego, the county has quadrants - North County, East County,
and South County. You guessed it, the award is for my activities in
East County, CA).

Its bad, though, when the local on-air talent totally screws-up the
name, as I heard one reporter (who has been there long enough to know
better) refer to the City of Encinitas in San Diego County as the
Ensenada area (between Oceanside and Del Mar).

hey,
regarding REACH being more willing to fly in rain... thats because REACH has IFR (instrumental flight rule) capabilities and CalSTAR doesnt. this means they are able to fly in rain and fog and CalSTAR can't. Stanford Lifeflight also has IFR on their helo.
-boulrog-

Your wrong. NOT all sensitive information is on encrypted or nextel etc

Officers from time to time will " forget" or whatever and it goes over regular channels. SOME stuff needs to stay off public forums like this and I will tell you WHY

Ask those who live and monitor in Orange County. Almost ALL LE traffic is encrypted. If your interest is LE monitoring you are OUT OF LUCK in Orange county and you can bet that they want to keep what they say out of people like you and others' ears. Don't forget , those who want to go full encryption will cite stuff like information being made public as reason to do just that.

a reporter in Phildelphia pushed politicians in his column for FULL encryption for not only LE but fire and ems too.

we don't need that here , use some common sense , leave NAMES , exact addresses etc OFF the forum. Just because you hear it doesn't mean its an invitation to go public. Be happy you have a scanner and keep it to yourself !

Actually, that's incorrect....I'll let you figure out who does and doesn't use encryption but no...not all SWAT teams use encrypted stuff. I agree with Ed and Evan...just use common sense.

My two cents: From a LE point of view, I didn't see any problem with Ed's post.

I could go on and on about what would be appropriate and what wouldn't but we've been down that road before. Common sense people...common sense.

The whole thing stemed from a earlier post. It was from the shooting in Ceres,CA

The person mentioned that a SWAT team was on a street where a officer lived.

"Swat is searching on Beachwood including an on-duty MPD officer’s home for a second suspect in the 211 earlier."

That officer is envolved in the story. No names were given or addresses.

I don't see anything wrong with that.

Now, if a Fire broke on some street and some On-Duty FireFighters house was envolved would that be the same thing? I see a double standard here.

Putting all this aside.....Why would the SWAT team be searching an area or street and having the "beep tones" going off. Wouldn't they be on a TAC channel where it would be quiet so whom ever they are looking for wouldn't here them comming (unless they checked the Bayscan list first)?

>If it goes out over the radio and is not scrambled,
>why not post it?

Because most of us understand that a non-secure
radio communication isn't necessarily a non-sensitive
communication.

>All
>SWAT teams that I am familiar with have encrypted
>coms.

You're not familiar with many SWAT units.

> It is not as
>if radio
>traffic is where we share privileged information.

Who is "we?" You seem to be operating with the
belief that anything sent out in the clear is not
priviledged information.

I guess if you leave the window down on your car, I
have the right to reach in & take the CDs laying on
the seat -- if you didn't think it'd be OK for me to
do so, you would have put the window up!

> We now have mobile data terminals, two way paging,
>cell phones, Nextel, satellite, encrypted
>radios and many more means of which to communicate
>without the worry of a bad guy with
>a scanner listening in.

Again, who is "we?" You're clearly not a member of
any LEA
SWAT-type unit.

> With our other means of communications in the
>field,
>very little of what goes on is actually transmitted
>over our two way radios.
>All sensitive information is handled through cell,
>Nextel, MDT, or two way pager.

In a normal situation with perimeter units, scout
sniper team(s), entry units, HNT & command post all

deployed, the primary SWAT comms system is going to be a two-way radio, clear or secure.

In a dynamic situation, no one has time to take eyes off the target to fumble around with a cellphone. Besides that, I suppose you think the CP would make a conference call or something? What sort of ringtone does "your" SWAT team use, the Mickey Mouse Club theme? Maybe it'd make a barricaded gunman calm down if he kept hearing 15 cell phones all around his home playing that theme at once... And what a pretty sight it could be at night, to look out from your barricaded home & see all the pretty little cellphone lights in the bushes, your neighbor's roof, etc.

If you think a Nextel is feasible for an entry team, you apparently don't use a Nextel much. It may be fine for outer perimeter units, especially since they do have tactical headsets for Nextels now, but it's not at all practical for a SWAT entry team (Direct Connect voice clarity, signal strength, circuit availability, network latency).

Do I really need to address the silly notion of MDTs? Does the negotiator take a time-out from trying to use a bullhorn or PA to talk to a suspect & say something like "CP to all units, fall back from your positions around the objective & go take a look at the nearest MDT display for a sensitive message!"

A two-way pager requires the personnel to take their eyes off the target, let alone hands off a weapon, requires light to use in dark environments and is way too slow of a method, especially if you need to rescind an instruction.

All the items you mentioned can be useful tools during some stages of the event, but not by the people that need to be up close & personal, and ready to act in a well-choreographed & rapid fashion inside a hostile environment.

It'd be nice if all tactical comms were encrypted, but as pretty much any intelligent scanner hobbyist who has been within range of the right freqs knows, that's usually NOT the case.

By all means, the SWAT unit needs to try to practice good communications OPSEC/COMSEC, use hand signals when practical, etc. Luckily for them, the people they're after usually don't have scanners, or at least not the right freqs in the scanner(s), or are too

hyped up/busy to monitor them. But the primary comms system is going to be a two-way radio that they've got a headset for, and that they can instantly communicate to all the other units in their tactical cell with, using a PTT switch that just requires one hand to hit & lets them keep their eyes on the target. And that two-way radio is going to be what's used to convey important operational intel & tactical instructions via.

> Go ahead and post anything you feel tells a clear
>story and
>update of events that you heard on your scanner.
>Scanning is a fun hobby and if it was
>broadcasted over the radio, it's just fine to share
>that with the Bayscan group.

I think it's a waste of time for anyone to pontificate what others here should or should not do, but the 'logic' you use to support your opinion is extremely ignorant of the real world.

I'll double check, but I thought a number of our Helos (if not all) were upgraded and certified IFR. What I understand of IFR is it's primary use is for landing / taking off at a known location, i.e. an airport, where you know the GPS coordinates of the landing spot, the altitude is know, it's known that the closest obstruction is at an altitude of 300 feet high 400 feet to the south, etc. IFR doesn't really help with landing in a field in the middle of a storm with nothing but a fire enging and a firefighter with a flashlight on the ground... The main problem would be those power lines that neither the flight crew nor ground firefighters saw.

from what I understand, none of us are allowed to repeat what we heard on Part 90 frequencies per the Communications Act of 1935 or 1934. Or cannot use it for personal or business gain if the traffic was not intended for you (though newsmedia been doing that with scanners for years*).

*if they do it, then can we listen to their freq and find out where Chopper 11 or Sky 2 next assignment?

I cant speak for the IPN and other services aspect, but for
the "mainstream" media, they don't (or shouldnt) ever rely on scanner
based information for anything they report. Their assignment editors
typically hear something on the scanner, then make an actual phone
call to the agency in question, or send a reporter to verify
information. Yes, I have seen exceptions to this, but then they try
to cover themselves by saying "monitoring public safety radios we
hear that....". Im not sure that's adequeate but...

As a matter of fact, ALOT of times, the posts on these groups are the
initial source of information to news desks and again, they always
try to verify independently.

Its a fine line as to whether that means they are making money from
the airwaves but...

35718. Re: [bayscan] Incident Alerts vs General Discussion

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-11 23:54:27 UTC
From: caladded@aol.com
Topic: 35716 Message: 35718

I prefer to NOT have TOO many lists , especially for the same area,
problem is you " miss" calls. there are probably too many as it is. I mean
there is bayscan,scannorcal, norcalonlinescanning , santa clara scanning

I prefer to keep things here on bayscan BECAUSE its been here probably the
longest time and has the most subscribers with over 600 , that way more people
can get involved/ are notified of incidents or get involved with the
discussion

while anyone is free to start any group they want , it dilutes the area to
too many discussion groups and also you start getting duplicate information on
incidents.

ScanNorCal tends to lean out of the area and more towards the area north
of the bay , so that one is not too much duplication , but norcalonlinescanning
and the one for Santa Clara Scanning is the same area and its overlapping.

ED

I have one of these on my truck for use with a BC-780xlt and it works
great on all the bands I care about from CHP to 800MHz.

35720. Helicopter IFR (Re: MVA south SJ)

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-12 00:08:16 UTC
From: inigo4688
Topic: 35637 Message: 35720

Hey guys, I know I'm in on this discussion a little late, but this PDF from the FAA has everything you'd ever want to know about helicopter Instrument Flight Rules:

http://av-info.faa.gov/terps/IPH/appndxC1.pdf

I'm sure Calstar helicopters are also equipped to fly IFR (and their pilots IFR certified), the company probably just chooses not to fly IFR because there are stricter FAA regulations, and the company's liability insurance would cost way more (I've heard this is a common issue with airplane charter companies, some choose not to fly night VFR either because of insurance woes).

Because IFR only applies to airports & heliports with charted instrument approaches, every LZ REACH and Calstar land at has to meet VFR minimums, which are basically 3 statue miles visibility and a cloud ceiling of 500 ft or more (more on this on p. 5 of the PDF). Even then, that's really crappy flying weather and a pilot would have every right to turn down the flight if they felt surrounding terrain or obstacles near the LZ made it a dangerous situation (which is probably what happened with REACH that day).

The real benefit REACH gets by operating IFR is that they can fly through all the weather and clouds they want ENROUTE from their base to the LZ, and from the LZ to the hospital, while Calstar would have to divert around all the clouds (if they could even make it there at all).

Calstar flies Eurocopter BO-105 helicopters (Here's a pic of Calstar 1 at Concord's Buchanan field, and pictures of what the cockpit of a BO-105 looks like):

http://www.airliners.net/open.file/670039/L/
http://www.airliners.net/open.file/636631/L/
http://www.airliners.net/open.file/413571/L/

REACH Mediplane flies Augusta A-109 helicopters (The first link is their rotar-wing website, and the next two are pictures of what the cockpit looks like in the A-109):

http://www.mediplane.com/Rotor_Wing/rotor_wing.html
http://www.airliners.net/open.file/524579/L/
http://www.airliners.net/open.file/344576/L/

Although the Augusta is a heck of a lot nicer (not to mention more expensive), both helicopters in the pictures could be legally flown single pilot IFR as per the PDF.

I hope I've been helpful, I've put a lot of thought into a career as a pilot for either one of these companies when I'm done with school, and in the meantime I enjoy it every time one of their pilots pops up on my scanner. =)

-Inigo

According to Section 2511.3 of the ECPA, intentionally disclosing anything we intercept legally to another party is illegal. Since we do that all the time here, we are technially in violation of the law, as I read it.

Regards, Jim

There is a nice Randall Larsen Tri band antenna for your car it covers High VHF/UHF/800mz (no good on low band) and is on a NMO mount it's about 12-14 inches tall and is hooked up to a BC785D in a VW rag top (2001) and mounted across the trunk deck is a Dual Band Ham antenna I could send you a photo off list if you would like

Wow. What a treat for my first night scanning SF trunked system. Multiple units all talking over each other on the channel. Sounds like this was a narc sting and the car got away with 3 suspects. Went into pursuit and the car started going down wrong way streets at high rates of speed. Taxi was hit Van Ness and Eddy. At one point a PD officer shot at the car but unknown if the car was hit. "Was your shot effective? Don't know, gotta check the car" Had a problem calling the chase for a while. By the time dispatch got the location, the
car was 3 blocks over in a different direction. Almost lost in traffic. Had spikes setup at one point. 2 suspects foot bailed, unknown if in custody yet. Driver is in custody after footbailing with the car still in motion. Lead vehicles didn't see the driver bail and kept chasing the empty car. ;)

Fun fun for scanning.

Jake

35735. Re: [bayscan] Code 33 Berkley

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-12 07:07:35 UTC
From: Jim Gammon
Topic: 34051 Message: 35735

You mean ECPD caught the guy? They are usually hanging out at the local
donut shop! Well, guess they do catch a few now and then.

35743. Another big manhunt here in Marin

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-12 08:33:24 UTC
From: Roger Strohmeyer
Topic: 35743 Message: 35743

Novato to be exact that is...sounds like someone bailed on a CHP officer. Establishing a perimeter and sending H-30, SWAT, Homeland Security, the FBI...the kitchen sink folks. :-)

CHP 42.16
MC Sheriff 39.24 TG 45616
Novato PD TG 47248

-Roger 12:33 am

[Non-text portions of this message have been removed]

35744. Search in Novato

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-12 08:34:12 UTC
From: Robert W. Sanford
Topic: 35744 Message: 35744

There was a DUI traffic stop made by the CHP and the guy foot bailed.

They just said on Novato's primary talk group to go to A5, going to search and see where the end up.

Ok they switched to talk group 62800 which is listed as County Wide APB but is being called "Control 2" on the talk group.

H-30 is going to come down and fly over the perimeter which is near the Vintage Oaks Shopping Center where Costco and Target are located.

Robert

35757. Re: Another big manhunt here in Marin HOMELAND SECURITY?

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-12 09:40:06 UTC
From: Bob
Topic: 35743 Message: 35757

I think the terminator (Govenator?)Is on the way too?

BTW Homeland Security does not respond to anything just coordinates incidents of national significance they use the DOJ and FBI as their hammer.
Which brings up the NRP (National response plan) I just finished a online course (IS-800)available on the FEMA site very interesting class for
scanner enthusiast recommend it for everyone on this list.
Another thought is we should start using more clear text in reports which is the way the pro's are going no more 10 and 11 codes that's
old fashioned and not allowed according to ICS (incident command system) protocols, FEMA also has a great NIMS (National incident Management system)class online. This should also be of use to users of this site.
Also lots of info on current and future Interoperability

* * * * * * * * * * *

National Incident Management System
Developed by the Secretary of Homeland Security at the request of the President, the National Incident Management System (NIMS) integrates effective practices in emergency response into a comprehensive national framework for incident management.
The NIMS will enable responders at all levels to work together more effectively and efficiently to manage domestic incidents no matter what the cause, size or complexity, including catastrophic acts of terrorism and disasters. Federal agencies also are required to use the NIMS framework in domestic incident management and in support of state and local incident response and recovery activities.
The benefits of the NIMS system will be significant:
☐ Standardized organizational structures, processes and procedures;
☐ Standards for planning, training and exercising;
☐ Personnel qualification standards;
☐ Equipment acquisition and certification standards;
☐ Interoperable communications processes, procedures and systems;
☐ Information management systems with a commonly accepted architecture;
☐ Supporting technologies ☐ voice and data communications systems, information systems, data display systems, specialized technologies; and
☐ Publication management processes and activities.

Check this link:
http://training.fema.gov/emiweb/is/is800.asp

> have you tried transmitting on this antenna?

Yeah, it's decent. But I have a Larsen dual band for my TM-D700.

Is it just me, or is it weird how often Emeryville PD says they are "deploying a rifle" ... I guess they have ARs or something, and a lot of them: I seem to hear a lot of them check in for the day and record which rifle they have. Given that most of the traffic on 453.45[173.8] is traffic stops and homeless people on San Pablo getting moved along, this seems a little bit of overkill. Have they ever actually used one of these rifles?

Motorola 800 trunked system. Create an account at
http://www.radioreference.com/ - this will give you the control channels
and talkgroups, and for many other systems.

[EDIS] COMMUNITY WARNING SYSTEM MESSAGE [Urgent: San Francisco Bay]
To: "EDIS Email Recipient" <edisfwd@...>

From: Contra Costa County Health Services

ABZCZC-CIV-CEM-306013+0045-111853-
This is an advisory for Pittsburg and Antioch. An incident at the Dow
Chemical
Plant in Pittsburg could affect individuals with respiratory
sensitivities. Most
people will not be affected. Eye, skin, nose or throat irritation may
be
possible for some people in the immediate vicinity of Dow Chemical.
If
people
experience any irritation, advise them to go inside and rinse any
irritated area
of their body with water. Handle this as advisory information only.
(DOW)ABNNNN

For more information contact:
Contra Costa Health Services Tel: (925) 260-6262

Because they are "scanning related" if there was an actual incident. Plus
not all of us sign up for all those alrerts.

Rechecking my inbox I received the cancel within a minute of the
alert checking email headers I cannot see much different except that
the alert was sent out as "URGENT" and the cancel was sent out
as "NEWS" possibly you should check your preferances at incident.com
Also I receive double alerts on a lot of incidents probably because
of my selection of EDIS Distribution Zones.

My point is reducing unnecessary e-mails and postings if someone wants them they can sign up for the alert zones that concern them. I already receive double copies from EDIS in somewhat real time should I get off the EDIS list and count on you to post EDIS messages 24-7 in real time? With your postings you're forcing them on people that elect not to receive them and incomplete messages at that. As an example you admitted you did not receive the cancel order that came out at the same time.

Sign up is easy and free at incident.com

I'd have to agree with Robert.. It is scanning related. They aren't coming automatically to the list which I would have a problem with. They don't come often either so I don't see why its a big deal honestly...I've never heard you complain when its been an edis about an amber alert or earthquake which get posted here also...

my 2 cents
Ben

From: john_polich
Topic: 35767 Message: 35776

Thanks for the advice, Bob. I thought I was doing people a favor by passing on a legitimate alert. If someone posted a similar alert that I may not have seen for my town, I would be grateful.

As for "forcing them on people," that could be said of anybody's postings that are not what a particular member of the group is looking for. Anyway, this discussion does give people a chance to consider subcribing to EDIS.

I'm not sure what you mean by, "As an example you admitted you did not receive the cancel order that came out at the same time." EDIS has yet to send a cancellation that reached my mailbox. If EDIS only sent the cancellation to subscribers to their "News" category, they did a disservice to lots of subscribers who received the original alert because they only subscribe to the more serious warning categories that are higher than news. I appreciated learning this from bayscan and I will pass it on to EDIS.

35777. Re: EDIS reducing unnecessary duplicate effort

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-12 21:30:10 UTC
From: Bob
Topic: 35767 Message: 35777

My argument was simple request to reduce e-mail load by utilizing EDIS as a write-it-once method for issuing warnings over multiple dissemination systems without duplicate effort.
I also noticed that the alert Robert sent was cut and pasted different then the official version this could be confusing and create incorrect information in a real emergency.
Like my post in regards to Homeland security last night I was just trying to help make this list more valuable and professional it was just a suggestion take it or leave it.

Topic: 35767 Message: 35778

I have to agree with Robert and Ben . You must consider too that
this time you got double the emails because the warning was put out in error
so you got both the warning and correction once from incidents.com and then
again from bayscan. I consider it only a small inconveniance. The warnings are ,
as Robert says , scanning related so I have to agree to keep posting them ,
depite my getting them twice.

I agree with you as to a valuable discussion "everything happens for a reason" I do not want to seem argumentative at all with you. We share common passions scanners, public safety, photography and it probably was valuable if someone now signs up and receives an alert that is important to their safety.

Sign up at incident.com if you're reading this post people

Although no indication was given as to how one might try to listen in on
this incident. Does Dow have a system? Would it be CCSO handing this?
Did anyone on bayscan get a phone call?

35781. Re: Ed Re: EDIS reducing unnecessary e-mails incident.com

Just to clarify
I get double messages from EDIS in regards to incidents all the time
I believe it started after I adjusted my preferences at
incidents.com so in effect Roberts was a third and I believe I
received the cancel because of my selection to receive "NEWS" alerts
at EDIS in addition to "ALERTS" this point's out an operational
problem at EDIS.
Since I got your attention Ed did you read my post regarding
Homeland security and ICS last night I really believe we should be
posting in CLEAR TEXT and if wanted by poster putting 10 and 11
codes in parentheses? I would appreciate your thoughts on this
matter.

We on Bayscan have gone over and over the argument over codes and clear texts. The bottom line is no one is going to be totally happy on the list as some want the clear text others have no problem with codes.

anyone who is interested in law enforcement scanning has no alternative but to learn codes as I know of NO law enforcement agency that uses clear text only.

Should you want to learn codes, there are a number of publications plus files such as those here on Bayscan.

I like codes and know it takes time to learn them especially with the different agencies covered by Bayscan such as SFPD, Oakland, CHP and others using different numbers for the same thing. I also believe you scanning pleasure is enhanced by learning the codes, but that is IMHO

Some will use codes on this list and some won't, that won't change anytime soon.

10-4 good buddy
Fair enough it's kind of like learning Morse code unnecessary, unneeded, outmoded but still fun and interesting. The issue of use of Clear text will resolve itself in the next few years anyhow as the whole nation goes to NIMS (http://fema.gov/nims/nims_training.shtm) and 10 11 codes go the way of horse and buggy.
I do believe the users of this list add to the incident description many Codes that they did not even hear used on the air in the particular situation just to show some kind of special knowledge or think its correct protocol when they really are showing a sort of ignorance of today's real world communication protocols. It is a proven fact that 10 codes just add to confusion especially since as you said "different agencies covered by Bayscan such as SFPD, Oakland, CHP and others using
Different numbers for the same thing" and in this time of so many mutual aid incidents seems so cumbersome and even dangerous. In a few years only we "old timers" will remember them anyhow.

Who you calling an old timer?

Oh, well I guess it applies here.

By the way just for your info:

The requested file was not found on WWW.FEMA.GOV.
As a result of FEMA's redesigned website some of the file names may have changed. We recommend that you attempt to change the file name extension to shtm (ex: http://www.fema.gov/help/index.htm becomes http://www.fema gov/help/index.shtm)
If you are unable to find the document you want, try searching for it or check the master index.

it does NOT add to the confusion ,maybe on this list it does . But SFPD officers KNOW their own codes and have little reason to use others. Don't forget penal codes such as 211 , 459 mean the same statewide.

From: Bob
Topic: 35782 Message: 35786

My contention and Fema agrees is that it adds to cofusion on Mutual aid incidents,

Another note on clear text its coming faster then a speeding bullet all federal grants to public agencies are going to be tied to adopting ICS (NIMS) which will cause an extremely fast adoption time frame get on the train or get left behind.

The following are some quotes from NEMA site.

"As you know, NIMS implementation is on a fast track. Minimum training requirements to be accomplished this year are listed in a memorandum from the DHS Secretary to Governors (www.fema.gov/nims). It is important that the minimum requirement be met, while the comprehensive NIMS Curriculum is being developed".

"Homeland Security Outlines NIMS Requirements for FY 2005
In a Sept. 8, 2004, letter to the nation's governors, the Secretary of Homeland Security outlined the minimum requirements for states and territories to comply with the new National Incident Management System (NIMS), a nationwide standardized approach to incident management and response. Developed by the Department of Homeland Security and released in March 2004, it establishes a uniform set of processes and procedures that emergency responders at all levels of government will use to conduct response operations."

I'll say my peace and crawl back in my hole... For those of you guys who insist on using codes.. How bout doing both?
For instance

"Just heard SFPD units go available" (10-8)

Then everyone is happy... You guys don't have to type out the whole damn code but since every department is a little different, I don't think its fair that we'd have to memorize each cities codes.. If that how you guys want it however I'm sure ED would be glad to teach a course on it for 600 + bayscanners at his house.. :-)

What about National inter agency incidents?

Speaking of statewide what if DOJ,DOD or a private firm is involved
in the incident will they know the state penal codes?
CDF and the Feds require Clear text on all working incidents for
previous mentioned reasons.
But this horse is really dead now I guess.

NADAR - National Advanced notice of Deployment of Road hazard

It is a new Homeland Security system to identify Ford Pinto's and
Covair's on the Interstate highway system. In the future it will
alert individuls to deployment of any Ford on a highway.

its a state frequency so its either indeed CDF or it could be a state hospital. Does it sound like they are outside or does it sound like a paging system of some sort?

I've heard a few more transmissions now, and it sounds like a paging system: the messages are being sent twice, and they sound like an answering machine. "Please bring that box of platelets up to room NNNN" and that kind of thing. I'm hearing it with a rubber duck on a Pro-96, so it's not in Stanislas. :)

I agree on the shoving and was going to use your example (55) I
think States rights are being eroded very fast..
With that said I think the concept is good and makes sense.

The concept is probably a good one. the POINT I am making is you have people on both sides of the issue on bayscan. I am 52 and have taken a L-O-N-G time to learn all these codes. I don't expect someone in San Jose to know SFPD and Oakland code.....heck " I Don't know" most of Oaklands codes..... but I and others find it faster to do the 211 thing as opposed to armed robbery , there are some codes that take longer to type in and on prolonged incidents I personally don't feel like doing it longhand.

Lets see how acceptable this stuff is to organizations like the CHP which uses LOTS of 10 and 11 codes for over 7000 officers (not to forget all the dispatchers)

BTW , South SF has a working fire on Mitchell 154.100 154.04 tac

1723hours

Your CHP point is very interesting it is going to take a lot of Fed money for all the training because the Feds are requiring NIMS certification for all first responders
(Local, state, private, fed, etc) we will hear something soon I suspect.
Anyhow off to a training class myself catch up to this thread later.

Codes DO add to the confusion on a mulit agency event. Many agencies are slowly getting away from codes. I use codes all day long at work, but do not use them with other agencies. Their codes may or may not be the same as ours.

The only time codes do not add to confusion is when used within the same agency and everyone uses the exact same ones.

Just my 2 cents ....

I don't know about the rifle deal, but I use a Larson dual band mag mount antenna also. I have one for ten meters as I had one of those old converted CB rigs for ten meters. Worked Japan and Austrailia on it a few years back, but ten is gone for now and besides, the ten meter repeaters all require PL tones now and that old rig didn't have any PL. Jim

Well Jim I am sorry you are so irritated but this was discussion
that was very scanning related, You choose not to sign up for EDIS
alerts and instead want to rely on second hand Inconsistent,
untimely, and possibly inaccurate information? Ed is not changing
anything so relax And as far as subject lines why change subject
lines? I have usually just add an tag line to them It makes
following a thread much easier and seems to be simple logic and that
way you can ignore the threads you do not like . so Jim I do it for
you.
Actually I felt today's threads about EDIS, NIMS, ICS, NRP and
related discussions were informative for everyone.

Hi Jerry,
NIMS stands for (National incident Management System) and is the new standard and related protocols (including clear text) for consistent Incident communication's it is the big brother of the ICS (Incident Command System) protocols being adopted by all agencies at all levels.
It is all part of the new NRP (National Response Plan) which is a very comprehensive system of consistent incident response at all levels of government and private responder's including even the private citizen volunteer it stresses that incidents should be handled at the lowest possible level and what how resources should be allocated. And defines type of incident response from local problem up to Incident of National Significance The following links are very informative and I think essential for any scanner enthusiast that wants to stay in the loop.
Also there is some great online courses available at these links and the price is right FREE
If your job whether public or private has any chance of disaster response or you just want to learn more you should get these Certs.

http://www.dhs.gov/dhspublic/interapp/editorial/editorial_0566.xml
http://fema.gov/nims/index.shtm
http://fema.gov/nims/nims_training.shtm

Also this new system is going to affect great changes for scanner listeners because it addresses Interoperability and new communications processes, procedures and systems;
Quote's from FEMA site

National Response Plan

"One team, one goal...a safer, more secure America"

The National Response Plan establishes a comprehensive all-hazards approach to enhance the ability of the United States to manage domestic incidents. The plan incorporates best practices and procedures from incident management disciplines□homeland security,
emergency management, law enforcement, firefighting, public works, public health, responder and recovery worker health and safety, emergency medical services, and the private sector□and integrates them into a unified structure. It forms the basis of how the federal government coordinates with state, local, and tribal governments and the private sector during incidents. It establishes protocols to help

☐ Save lives and protect the health and safety of the public, responders, and recovery workers;
☐ Ensure security of the homeland;
☐ Prevent an imminent incident, including acts of terrorism, from occurring;
☐ Protect and restore critical infrastructure and key resources;
☐ Conduct law enforcement investigations to resolve the incident, apprehend the perpetrators, and collect and preserve evidence for prosecution and/or attribution;
☐ Protect property and mitigate damages and impacts to individuals, communities, and the environment; and
☐ Facilitate recovery of individuals, families, businesses, governments, and the environment.

The benefits of the NIMS system will be significant:
☐ Standardized organizational structures, processes and procedures;
☐ Standards for planning, training and exercising;
☐ Personnel qualification standards;
☐ Equipment acquisition and certification standards;
☐ Interoperable communications processes, procedures and systems;
☐ Information management systems with a commonly accepted architecture;
☐ Supporting technologies ☐ voice and data communications systems, information systems, data display systems, specialized technologies; and
☐ Publication management processes and activities.
Hope this was informative,
Bob (Rocdad)

Ed, NIMS is based on something called the Incident Command System -
developed in California by LOCAL GOVERNMENT firefighters in conjunction
with the State of CA and USFS, following chaos on a series of major
incidents in the 1970s because everyone responded "their way."

I 100% agree, and this dead horse has long been calcified.

If you hear something, and you post it, you obviously know the code, so
take the extra 30 seconds to post what the code means.

If your time is that valuable that you can't take the 30 seconds (or less)
to type it all out, you shouldn't be posting here to begin with.

35844. New subject More Change in the wind "THE CAP" EDIS related

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-13 05:41:44 UTC
From: Bob
Topic: 35844 Message: 35844

Just thought this would be interesting to We Scanner people.

Link to more Information: http://incident.com/cap/what-why-how.html

What is it?
THE CAP
The Common Alerting Protocol (CAP) is an open, non-proprietary standard data interchange format that can be used to collect all types of hazard warnings and reports locally, regionally and nationally, for input into a wide range of information-management and warning dissemination systems.

This project acts on several of the recommendations of the "Effective Disaster Warnings" report issued in November, 2000 by the Working Group on Natural Disaster Information Systems, Subcommittee on Natural Disaster Reduction. It also draws on various earlier professional discussions such as the recurring "Common Alerting Protocol" thread in the Networks in Emergency Management e-mail forum during the 1990s.
Why do we need it?

Warning systems in the United States today are a chaotic patchwork of technologies and procedures. Not only is there no coordination, there's no mechanism for coordination.

Existing nationwide systems are limited in scope both by their technological legacies and by the organizational mandates and priorities of their sponsoring agencies. In particular, none of the existing national systems are entirely suited to the needs of state, local and private emergency-information programs. As a result, dozens of different technical and operational warning systems have sprouted, seemingly at random, throughout the nation.

The Common Alerting Protocol will benefit a) the public, b) public agencies and private concerns (such as industrial plant operators) with warning responsibilities, and c) developers of new sensor, threat-evaluation and warning-dissemination technologies.

Check out the link above for alot more Information.

Fremont keeps a AR in every supervisors (Sgt) trunk and Yes they
have used them They dropped a scum bag in the middle of Fremont Blvd
a few years ago during a pretty wild shoot out.

I will let you know the next time I hear anything on there.. I made sure the tones are correct.. the only difference I have is the tone for Pittsburg (I was not hearing them at all since they are so far away. I have 156.7Hz for them.. not sure where I got that.. confirming that is not correct? I was on Hwy 80 last week on my way to Folsom and I did hear Pittsburg talking about assisting Bay Point etc. I know Bay point is right next to Pittsburg.

SJPD tac channels are chock full of interesting tidbits if you are close enough to hear. The repeated backup channels 9-11 are often "code 33" (here only meaning "don't use"), so 13-15 get the overflow. Occasionally undercover ops are coordinated on them as well.

Channels with dispatchers show the professional, highly-skilled side of our police force; tac channels tend to reveal the more human, comedic side. I'll leave it at that :-)

35882. bomb squad activity on ALCO Sheriff now

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-13 17:45:25 UTC
From: Steve Wilson
Topic: 35882 Message: 35882

I haven't had a chance to determine location, but I have heard ALCO Sheriff transmissions about a home-made bomb, building evacuations, and someone taking the bomb squad in to the bomb. Most recent traffic on talk group 16176.

Steve

Still don't know the city. Intersections heard:

6th and Kepler
6th and Fernandez (close to location)
8th and Hutchins
5th and Evans

Steve

I completely agree Evan. If the thread is long and on track as far scanning related the least everyone can do when you crop\edit the message is to leave what you're replying to intact in the body of the message. Otherwise, it just creates confusion as to where thread is going and where it has been.

This is a huge bitch I have had with AOL and one of the reasons I stopped using\recommending them back in 93'. I believe by default with AOL's mail program doesn't include the original message in the reply. It's extremely hard to manage email if you don't know what the person was replying to and vice versa especially if you recieve an average of 200 emails a day.

My 2 cents.

Four patients - two children and two adults with three AMR rigs on-scene.
Extrication complete - sounds like this one is winding down with MED 30
canceling the MTIP (?) alert.

TRANSPORTATION (AMR) just confirmed that Valley Medical Center will receive
all four patients.

Final update on this incident unless conditions warrant.

Craig,

Glad to read you're putting it to good use. I actually got some press lately as the Jan. 2005 issue of "Scanning USA" did a piece on scanning in the Bay Area and for Santa Clara County they mentioned my name and web address. Kinda cool!

Anyway, please check it regularly as I make changes as needed. I recently updated some PL's and San Jose Fire command channels.

Take care,
Brian

First .....George .....I can NOT get your feed on firefeeds.com ?? I am using Bens feed

this should be residential with exposure problems
A6/14960 command
A9/ 15056 TAC

1st) E33 19 15 43 Trucks 19 & 15 Division 3 Battalions 9- 8 Rescue 2 and a med unit (educated guess)

2nd) E 39 26 42 44 Truck 11 Battalion 6 - mobile air 1 med 3(confirmed)

this is very close to station 33 , near the Daly City border

update , lot of fire in attic , truck companies 19 and 15 opening up

1st alarm correction E32 went with 19 and ?? two of the following
15 , 33 , 43 (its a hobby with me :-) plus medic unit is 7

on 2nd alarm / E11 was closer and rolled and cancelled E44

I am a bit surprized a Daly City Engine didn't roll on automatic aid.

its nice having 2 to choose from. Bens has the advantage of also having SFPD, BUT its a disadvantage when (like NOW) there is a fire

BUT , since firefeeds SFFD is not working, its a life (well ,not exactly :-))) saver

btw , BEN !!! if you get a LA County FEED , PLEASE see if you can get them to give you ONLY LA County Fire.....firefeeds has one but they also have south bay regional fire , Verdugo fire and some others on the feed and its way too confusing. LA Co Fire will be PLENTY busy by itself !!

For you or anyone else looking for memory: http://www.pricewatch.com is great for looking up prices. Retailers 'compete' for the lowest price. No bidding or anything. Currently a 128 meg pc133 is $11.

Why is it a disadvantage to have SFPD during a fire when 1 comes out of each stereo speaker? They don't go over each other?

35929. SFPD question

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-14 02:17:39 UTC
From: Bryan
Topic: 33641 Message: 35929

I was in SF for a couple of days and noticed the patrol cars had lo-band whips. I thought SFPD was completely TRS now, what gives? BTW, I was about a half block away when the pursuit went flying down Van Ness Tuesday eve. Pretty wild ,my first time scanning SF. Thanks for any help on my question.

35930. Re: [bayscan] Bens feed

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-14 02:18:56 UTC
From: caladded@aol.com
Topic: 35915 Message: 35930

I adjusted my speaker to only hear the left , but I still then hear the cops on the left speaker as well.

Ben , would it be too much to ask to reverse the speakers ?? I don't know the set up for others, but on my dell , I can unplug the left speaker , this means I can UNPLUG the cops when needed .....if it works for you and others , since you primarily do fire stuff anyway, would solve the problem . BUT , don't dump the cops entirely , that feed can be real interesting as well .....thanks for all your feeds !!!

35931. OPD Question(s)

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-14 02:19:20 UTC
From: inigo4688
Topic: 35931 Message: 35931

Hey guys, first off I just wanted to say thanks because I think it was this group that I heard about the RS 800 Mhz antenna on. Well I got one, and now all the sudden I can recieve the Oakland TRS almost all the time and Richmond and ALCO in the afternoons and evenings (I assume from skip), from my house at sea level in a VALLEY in Marin (Fairfax).

I was just wondering if any long time Oakland listeners could tell me if any of their TACs are reserved for (or at least commonly used by) specific divisions like NARC, VICE, detectives etc., as opposed to just the normal car-to-car stuff you commonly hear. I've been listening to NARC surveillance of a drug deal (and their subsequent bust) in West Oakland on one of the TACs this evening, which is why I ask. It's been really interesting to hear how coordinated these guys are, and I'm only asking because their TG is pretty much dead now.

I was also wondering what the "patch" TGs as I've heard them referred to are used for (00-001 and 02-011) as well as Patrol 3 thru Patrol 5 (so far I've heard miscellanious Tactical stuff on these). If anyone can help me that'd be great.

Thanks,
-Inigo

hmm that really odd. It shouldn't.. If there is a fire and you want to nix PD go into windows mixer and slide the little slider bar to the far left or right.. If you do that it will cancel out the offending stereo side...

From: inigo4688
Topic: 35931 Message: 35941

Thanks Ed! That makes sense, I heard it was a patched dispatch position on the site I found it on originally, but every time I'd search around to try and match the dispatchers voice on another TG I never could, so I just wanted to double check and make sure it wasn't something completely different.

I've heard that Patrol 1 is the primary dispatch for the area around downtown Oakland, and Patrol 2 is everything east of that (and I'll bet 3 and 4 are secondaries for 1 and 2). Have you found this to be the case?

Again, thanks for the speedy reply,
-Inigo

I got the Pro-93 for $90 on eBay a few months ago. Only 300 channels
but it's got alpha tags and trunks and everything, it seemed like a
pretty good deal (although now I wish I went for the 92 for its LTR
trunking capability).

That's on tone 4. It's apparently got some issues. We were told not to use it until further notice. I don't recall being told it's back in operation, so it may be some repeater low battery alert or issue.

around 140 myrtle , now , gang- related house , nortenos gang

a few officers don't have the green capable radios (for some reason) I believe they were trying to pair them up with officers that do........

all four of these agencies DO have the green.

balance control.....you didn't see all the posts , done that , doesn't completely block all traffic .....results in some traffic from one speaker coming out the other one. As far as SFFD is concerned , its not a problem as long as firefeeds is up. With SFPD , it does create a problem, although nothing I will lose sleep over .

For those of you keeping count...

San Jose Fire responded to a fire in a single family dwelling on Grass Valley Court in east San Jose.

This was a fire in a back room that caused four smoke inhalation injuries with three transported by a single AMR unit and one patient going AMA per MED 30 on scene.

Incident was contained to the room and handled with initial responding units. This fire was handled on San Jose Command 4 - 153.980.

I do know that they replaced the old Micor repeater on
Walpert Ridge with a new Quantar. That may (or may
not) be the reason. I have not been in to the other 2
trasmitter sites, so I do not know if they have
replaced those (Hayward Fire is a 3 transmitter
simulcast system, with (last I knew) 6 receiver sites
voting)

It's one of the Oakland TRS frequencies... Location #2. I've noticed their EDACS system tends to send the control channel all over the place at different times of the day, LCN4, LCN9, etc. It defaults on LCN1 though obviously.
Ben, I've also noticed that I get way better sound quality on some frequencies within oakland's system then on others, and I don't really know why this is since they should all be at the Broadway site (I don't know why if they're using omnidirectional antennas) but maybe you're experiencing a similar thing.

I did find CC type noise a few days ago in the 860 MHz range that sounded unlike any I've ever heard before, like really high pitched chirping in a continuous rhythm (nothing like Motorola or EDACS), and I've been listening to various examples of signals online and it sounded like TDMA digital trunking, maybe some weird kind of MDT or the digital signal federal agencies use to update DES Encryption keys (although unlikely since it's the wrong band, if I find it again I'll post the freq)... but I suppose those are all possibilities if you can't identify it, but I have a feeling it's Oakland EDACS.

35997. CHP "Violet" Repeater Off Line?

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-14 23:51:37 UTC
From: inigo4688
Topic: 35997 Message: 35997

Hi guys,

I know the usage patterns of CHP Repeaters have been discussed a lot in the past, and are somewhat of a conundrum (not to mention 453.825!), but I figured I'd ask anyway.

Does anyone know why the CHP "Violet" frequency - 42.16 is no longer repeated? I get the dispatch still but mobile units have always been repeated as long as I've been listening and since I got back from a trip a few weeks ago they haven't been. Highway 101 is more than 5 miles away so I haven't been able to get anything on the mobile or the extender frequency. Is this a seasonal thing, or should I just accept the fact that I'll never hear mobiles again and reluctantly move on with my life? :-P

Thanks guys,

-Inigo

they have done the same with other freqs in GG Division.....the Amber (Redwood City) is on/off with the repeater too. cross your fingers, it may come back. btw , late at night I hear the same dispatcher doing both Marin and SF on 42.44 (pink) or Marin and Redwood City on the Amber (42.080) they are usually on repeater lately. I notice the Ruby is not repeated lately (42.50 San Jose) but the Bronze(42.12 - Oakland) and the Aqua (42.62 - Castro Valley/Hayward/Livermore/Pleasanton) almost always are on repeater.

Keep us posted. I figured I'd be a little more helpful and actually post the site I was talking about (although I had to find it on google again). It is: http://www.kb9ukd.com/digital/

I've found it really useful in identifying those horrible noises that always startle me when I get daring and scan entire bands. :) It's also useful because each control channel sounds a little different, so you can audibly identify the type of system it is even if the signal's too weak for the scanner to decode.

EDACS 9600 baud Control Channel:
http://www.kb9ukd.com/digital/edacs96.wav

Motorola Type I and II:
http://www.kb9ukd.com/digital/motorola2.wav

Motorola APCO-25 Digital "ASTRO" stuff:
http://www.kb9ukd.com/digital/motorola_net.wav
http://www.kb9ukd.com/digital/astro96k.wav

Thanks for the quick reply guys,

I also immediately thought of Maroon (Contra Costa), even though I lock them out some of the time because I get these weird high pitch sounds at the beginning and end of their transmissions (even when the attenuation is on). I'll take your advice and keep my fingers crossed though.

36006. Jumper off I-280 bridge in Hillsborough area

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-15 00:44:47 UTC
From: Tim
Topic: 36006 Message: 36006

At approximately 4:30PM, a CHP Officer on I-280 witnessed a vehicle on Southbound I_280 stop partway across the Durand Bridge (going over Crystal Springs Dam) & the driver get out of the car & hop off the bridge. This is in an unicorportated area og Hillsbough I think.

It's a couple hundred feet drop down onto a road below, some buildings, & a wooded area, so it was a suicide.

This is at least the second "10-56" suicide in the past month.

Obviously CHP is on-scene (42.08), as is San Mateo County SO (now on the Green -- 488.8875), plus fire dept & EMS. The Water Dept is also on-scene, since much of the wooded area & some of the buildings beneath the bridge are theirs, and fenced/gated).

CHP & SO units on-scene now are still trying to find the person/body, and SO investigator's & Coroner were being notified.

From: Paul E Olson
Topic: 35997 Message: 36012

I could be having a senior moment, but I seem to recall about the time the CHP started "repeating" the mobile units, was that it isn't really repeated. But that the dispatcher has the option of "patching" the mobile transmissions back onto the base frequency. I don't recall anyone ever explaining why they would do this vs. not.

I've never heard this in the Sacramento area, but again I seem to remember someone saying that Golden Gate got new dispatch consoles about the time this started.

Can anyone more in the know clarify/refute this?

Hi Paul,

I suspect that is the case, but because the dispatcher's transmissions are are coming from a high up antenna somewhere rather than a lower power mobile one, I'd assume the patched mobile transmissions will still be going over that powerful antenna which will act just like a repeater. I think we're all just using the word "repeated" to simplify things.

If I'm wrong though please set me straight. I'm still pretty new to the technical aspect of kind of stuff, and always interested in learning more. :)

It's not really a matter of how big the thread is, although on a larger / longer thread, it's worse.

There IS a way to turn quoting on by default on AOL, I just don't know how. And unfortunately, when you politely ask people to do so, the attitude is usually "&*#@ you" if they don't know how.

I've had a number of people who e-mail me off list and change the subject and don't quote a thing, but then cop an attitude when I have no clue what they're talking about. One was subject "Interesting thought...." and the body only contained "But it won't work. Get back to reality" or some such. I politely replied asking them what they were referring to - and their answer was "Geez, you REALLY are clueless, moron." They quickly found a new spot in my killfile. :)

I'm on dozens of lists, and get in some groups hundreds of e-mails a day. I may not see every message in every thread, often I'll just read random messages in the threads, and to see one that's a reply but mentions nothing of what they're replying to is a waste.

>This is a huge bitch I have had with AOL and one of the reasons I stopped
>using\recommending them back in 93'. I believe by default with AOL's mail
>program doesn't include the original message in the reply. It's extremely

There's gotta be a way to turn it on by default. I do know a senior SysAdmin there, but as I don't think Ed is willing to implement it if I found out how, I'm not going to bother him.

I do have a funny story when I worked at an ISP - one of our sales reps had Herpes, but didn't 'advertise' it. A few of us who were good friends with him knew. One of our sales meetings, we were discussing pricing, and how we were about twice as expensive as AOL - and how to best 'market' ourselves to someone who says "Well, why pay $20 a month with you when I can pay $10 to AOL?" and one of the sales reps (who didn't know the other rep had herpes) gave a great reply: "I will NEVER put AOL on any computer I ever own. AOL is horrible. It's a virus. It's worse than herpes." Almost everyone but him burst into laughter.

Evan

36015. OT: You might hear me tomorrow!

Hey guys, I put this OT because this is a public safety scanning forum, but if anyone listens to airband, I'll be flying an airplane out of Novato's Gnoss Field airport tomorrow afternoon. I'll be getting a lesson in a Cessna T303 (thanks to a very generous family friend):

http://www.airliners.net/open.file/565301/L/

I'll be talking to ATC with the callsign: N707RL -or- Cessna 707RL.

Again I know this is off topic, I just thought it might be cool if someone in Marin happened to hear me tomorrow. :)

Don't know if thats is right , heard officer safety was an issue , for instance the officers from one area wanted to hear others like the coast units on amber wanted to be able to hear units near 101 , don't know if thats right. Knew about " repeater" wasn't "technically " correct but it is the same effect.

I never have heard the green , 42.54 for Hollister/Gilroy office doing it nor Sacramento when I am up there either.

I wasn't a "big" fan of CHP radio until GG Division started doing it .....makes it a whole lot better agency to listen to.

From what I have been told by friends at CHP, there is no set policy of weather to leave the repeated audio on or off. It is dispatcher's preference. The reason I say preference is that when repeating audio the dispatcher has to wait about 1 second after the unit stops talking to transmit or they start transmitting over the unit's squech tail. Some people apparently don't like having wait.

Some dispatchers like the repeated audio so that all units can hear someone talking and not step on eachother.

At least that is what I have been told ....

Interesting, you'd think the wait would be worth it given units could hear eachother and keep a better mental idea of what's going on. Ultimately I think that would amount to less talking on dispatch's part.

Topic: 35881 Message: 36026

Hey Bill,
I use a Pro-2052 and it cannot scan both at the same time out of the box but with proper software it will switch from scanning conventional to trunked automatically There are a quite a few good choices in software my favorite is "Radio commander 2052 for windows" http://www.qsl.net/kd5lmy/software1.htm this shareware does not expire and the author keeps it bug free and updated I should really pay the guy the $14.95 he is asking for it.The author calls it AUTOMODE and it lets You scan conventional and trunked simultaneously. I love the fact that it logs all freq's found and actually searches and logs talk group ID's and has a GUI that looks and behaves just like the radio.

FEATURES of Radio commander 2052 for windows

☐ Upload and Download the Radios Channels including trunk bank frequencies and ID's.
☐ Complete Computer control of the Pro-2052.
☐ Display Alpha Tags, and Bank Names, including Trunk ID's from the
Computer.
☐ Edit Frequencies, and Data, then upload to the Radio.
☐ Keep a database of Trunk Id's with Alpha Tags.
☐ Instant Channel GOTO.
☐ Tune the Radio to particular frequency from the Computer.
☐ Bank control.
☐ Search for frequencies, in over 20 different bands.
☐ Manual searches.
☐ All search frequencies are logged.
☐ Search for Trunk Id's with logging, and database search.
☐ Name all 20 banks to reflect frequncies , ie: Police etc., and trunk status.

36031. Sunnyvale Activity last night

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-15 16:02:11 UTC
From: b52hbuff2001
Topic: 36031 Message: 36031

Did anyone hear what happened in Sunnyval last night? PD was calling in a negotiator. The person they were looking for was hiding in the crawl space of a house. They ended up cutting the floor to get to him.

Another question about the incident. It was handled on Sunnyvale PD's main dispatch frequency. All of the other PD units switched to the 'STAR' frequency (special tactics and response).

Anyone have any idea why they don't use the special ops frequency for special ops? ;) 'Hiding out' on the main dispatch channel doesn't sound very stealthy...

36032. Why broadcast open mic calls?

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-15 16:03:48 UTC
From: b52hbuff2001
Topic: 36032 Message: 36032

Occasionally, I hear dispatchers announce an open mic. How does the offending officer get this call? Do the PD radios still receive when they are transmitting? Or are they hoping that they'll get the message from a college or car radio?

36033. Re: [bayscan] Why broadcast open mic calls?

They're assuming that the officer will hear it on the car or handheld
(which ever one he's NOT using).

Typically when I do hear an open mic announcement, it's done in a break
between the open mike, when the radio unkeys.

It's not really a matter of how big the thread is, although on a larger / longer thread, it's worse.

There IS a way to turn quoting on by default on AOL, I just don't know how. And unfortunately, when you politely ask people to do so, the attitude is usually "&*#@ you" if they don't know how.

I've had a number of people who e-mail me off list and change the subject and don't quote a thing, but then cop an attitude when I have no clue what they're talking about. One was subject "Interesting thought...." and the body only contained "But it won't work. Get back to reality" or some such. I politely replied asking them what they were referring to - and their answer was "Geez, you REALLY are clueless, moron." They quickly found a new spot in my killfile. :)

I'm on dozens of lists, and get in some groups hundreds of e-mails a day. I may not see every message in every thread, often I'll just read random messages in the threads, and to see one that's a reply but mentions nothing of what they're replying to is a waste.

>This is a huge bitch I have had with AOL and one of the reasons I stopped
>using\recommending them back in 93'. I believe by default with AOL's mail
>program doesn't include the original message in the reply. It's extremely

There's gotta be a way to turn it on by default. I do know a senior SysAdmin there, but as I don't think Ed is willing to implement it if I found out how, I'm not going to bother him.

I do have a funny story when I worked at an ISP - one of our sales reps had Herpes, but didn't 'advertise' it. A few of us who were good friends with him knew. One of our sales meetings, we were discussing pricing, and how we were about twice as expensive as AOL - and how to best 'market' ourselves to someone who says "Well, why pay $20 a month with you when I can pay $10 to AOL?" and one of the sales reps (who didn't know the other rep had herpes) gave a great reply: "I will NEVER put AOL on any computer I ever own. AOL is horrible. It's a virus. It's worse than herpes." Almost everyone but him burst into laughter.

36035. GAS LEAK - SAN JOSE

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-15 16:55:02 UTC
From: Craig Rose
Topic: 36035 Message: 36035

2530 Brentford Drive at Winlock

Being handled on SAN JOSE FIRE COMMANY 4 - 153.980

High pressure gas line that is pushing up the pavement. Requesting CODE 3 San Jose PD response to assist with an immediate evacuation of the immediate area. ENGINE 16 is dropping a 5" supply line, but keeping it dry at this time.

USAR COMPANY 16
ENGINE 21
ENGINE 3
TRUCK COMPANY 3
BATTALION 1
BATTALION 2
MED 30
HIT COMPANY 29
ENGINE 16

Quick update -

BATTALION 1 just requested two VTA busses to respond to shelter the residents due to the cold.

BATTALION 2 is having difficulty with radio - this incident is now being moved to COMMAND 3 - 154.115.

Incident update -

- BATTALION 2 is now leading FIRE GROUP consisting of all assets except the HIT TEAM - they are now operating on San Jose Fire TAC 5 - 155.880 (I believe?).

- MED 30 and San Jose PD 5C10 are working together on evacuation coordination.

- Cassell Elementary School to be opened as an evacuation center.

- IC requests one additional Engine Company (ENGINE 19) to respond CODE 2. Also requests training be canceled for today and have Red Cross cantina respond to the evacuation center.

The pl's that we refer to are the OUTPUT pl tone.. The majority of the time each department has a separate pl tone. So if you have more than 1 department with the same freq, you can listen to both or 1 by blocking out 1 freq by putting in the pl tone for the output. Thats what I do for CDF and also for Milpitas and stockton fire..

Many of us are situated in areas that receive multiple agencies on a single frequency; for example, San Jose PD and Berkeley PD share some frequencies. If I only want to hear SJPD, then I can put it the PL tone and I won't hear BPD, which uses a different one.

Secondly, scanners have (relatively) terrible RF front-ends with regards to overload. So we often get spurious transmissions on a frequency which are really intermodulation products ("intermod") from being near some strong transmitter on a different frequency. Having the PL tone-squelch turned on decreases the likelihood of hearing this noise. The worst case for me is the 152 MHz paging towers that dot San Jose. Much of San Jose area public safety is in the 151-156 MHz band, so intermod is a real problem, unless the PL tone-squelch is enabled.

Radios purpose-built for a narrow range have much better (and more expensive) RF front-end designs, so it isn't as much of an issue for the actual users of these frequencies.

Thanks for the quick answers I did not realize that available
scanners allowed pl tone inputs. Sounds like it is a nice feature I
will have to check mt owners manual but do not think mine can do
this thanks again.

Topic: 35881 Message: 36050

Hey Bill, Just another note the winscan software for the pro-2052
that comes with police call also allows you to Scan both
conventional and trunked systems
simultaneously!

"Now you can control Radio Shack Pro-2052 with one easy to use
software package.

Features on WinScanRS® Version 2.0 for Windows 95/98/NT 4.0/ME/2000
Professional/XP:

Simple to use interface. Looks and works just like the front of
the Pro-2052.*
Build customized scan lists.
Add Alpha tagging to the frequencies you listen to+.
Upload your scanner's memory to a database on your PC.
Scan in conventional and trunking mode simultainiously!
Program EDACS and Motorola talkgroups and frequencies!
Create different scan lists for multiple states and cities!
Has MultiTracker□ scan mode- Scan both conventional and trunked
systems
simultaneously!
And much much more!"

The Pro-2052 does not have tone decode capability so you'll hear the transmission from any station within range on a frequency. The only current Radio Shack scanner with tone decode capability is the the Pro-96. The Pro-92 and the Pro-2067, the desktop version of the Pro-92, were the only other Radio Shack scanners that had tone decode capability built-in.

Regards, Jim

> Secondly, scanners have (relatively) terrible RF front-ends
> with regards to overload.

That's why I wish Berkeley would use different tones on their channels:
I often have my 780 stop on #1 [460.175] with traffic on #2 [460.25];
since the whole thing bleeds over, the tone from #2 stops the scanner on
#1. If they were different tones, this wouldn't happen. Granted, their
tower is about 1 mile from my rof, direct line-o-sight, but still. I
finally wound up attenuating these channels, which helps a lot.

From: Matthew Kaufman
Topic: 36065 Message: 36066

CDF Felton dispatches "County Fire" units, which include both paid and volunteer stations. The old numbering scheme was two-digit, but changed to match up with the rest of the county's 4-digit scheme some months ago.

Thus Bonny Doon, with engines 32 and 34 and rescues 32 and 34 and water tender 32 became engine 3221, 3222, rescue 3261 and 3262, and water tender 3252.

However not all companies were so lucky as to get to keep their first 2 digits, because of conflict with the numbering scheme. I believe that 36xx is the Loma Prieta volunteers. I haven't updated firescan.net with the new numbers.

My reception of Blue stinks.

They've gone UTL, other callers indicate it's much further south (into San Jose).

I have frequent co-user interference on 154.025 between Petaluma Fire (primary agency for me) and Mtn View Fire. I frequently use my Bendix King H/T to monitor PFD, as it has tone squelch and a good receiver.

I have heard of inline notch filters for 152 MHz paging interference. Has anyone here used them? I get some pager intermod on 154.025 (and a few other VHF freqs) with my PRO-2066, which lacks tone squelch.

Anybody know what frequency they run on? I know they have at least one or two Ranger vehicles and I know they're equipped with 2-way radio.

Thanks,

-Roger 23:34

...Ok they switched to talk group 62800 which is listed as County Wide APB but is being called "Control 2" on the talk group...

From what I heard recently, the lowband Control 2 (39.52) is being patched into a MERA tg. This enables MERA law enfc users to somewhat communicate with lowband law users. The problem is that in order to be heard on the MERA tg, the transmission on Control 2 has to be effectively received by the lowband site. With the crummy performance of lowband portables, this is sometimes a challenge.

Control 6 fire dispatch (46.50) is also patched into the MERA system. It is on the "SAF" (So.Area Fire) tg. As I only have a system XTS3000 from which to listen on, I have no scanner tg/hex numbers. I think it's on the RadioReference site, though.

FYI: The previous MERA fire TG plan is being scrapped, and eventually Marin fire agencies will all be dispatched on one TG, much like Sonoma County's REDCOM setup.

BTW: did anyone hear Marin County Comm lose both F-6 and F-13 on Sat night? They had to use telephone for district fire dispatching until the problem got fixed.

Hey Ben,

Control 4, Control 6, Control 13, Control 16, and Control 35 as well as San Quentin Fire and all the Tacticals are still used on a daily basis in Marin. I used to live in Inverness and the Fire TAC UHF freq is active there but it sounds like a simulcast of a combination of Control 4 (County Fire) and Control 35 (Novato Fire), maybe so the volunteer fire fighters there can stay informed... but they're dispatched on County's freq. Every district fire department outside San Rafael (Control 16), and Novato (Control 35) is on Control 6. Got all that? Frequencies are below in your post.

When they switch to MERA I'll have nothing to listen to... btw I flew today. Went from Novato down the golden gate to pier 39 and back up to Santa Rosa, and back through central Marin county on my way back. Beautiful day, and [mostly] friendly air traffic controllers. :)

Hey Roger,

Marin is the DPR Park Ranger "Green" on - 857.9375
Sonoma is "Orange" - It's on 855.7125 (Although I haven't been able to hear anything yet)

Green is interesting because it covers a lot of areas at once (even though there are so few rangers). You've got one or two rangers around Mount Tam that check in once or twice a day (if you're lucky), I guess the guys at China Camp are also on here but they sparesly touch their radios. What I've noticed most is the rangers on Angel Island also use this freq, as well as the boats they use to ferry people to and from Angel Island, so when you hear passenger reports and what not, that's the Angel Island ferry you're listening to. Keep in mind this is a very dead frequency, but I might try to run ScanREC on it a few times to see if I can figure out the numbering scheme on units (vs. where they're located, if someone hasn't done that already).

Hope I could be of some help,

Yes, thanks Inigo. That's very helpful. I think I'm just curious more than anything about the Rangers frequencies since China Camp is not far from my place here in Terra Linda.

Way back when China Camp was a well know "race track" so to speak and even now you still hear a good accident now and then usually revolving around speed. In the good old days bfore it was a state park there was a small motocross track out there...you could shoot a gun...etc. etc.

Thanks! Hehe that's weird. Hey Roger on a related note, do you or does anyone else know if anyone's tried to make a CHP "beatmap" kind of thing?

I'm not sure whether CHP assigns officers to segments of the freeway like a beat, or if everyone just hangs out at the office and a few cars are out just cruising the entire thing. I'm not even sure why I'm curious since they give their location fairly frequently anyway, but if you stumble onto a conversation that's in progress with "34-20" for instance, it'd be cool to be able to get an idea of where they might be. (I always hear that unit around Central San Rafael.)

It'd be fun to do with Marin County Sheriff too but CHP would be a heck of a lot easier because there're less of them.

Ahh, yeah North San Pedro Rd. would even still make a nice place for a street race in the middle of the night. I'm sure SRPDs all over that though, plus if you screw up then you're in San Pablo bay. That's pretty harsh.

36093. crash in San Joaquin county

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-17 10:31:16 UTC
From: caladded@aol.com
Topic: 36093 Message: 36093

San Joaquin has a fatal on State route 12 near " korea" wonder about
the spelling but that is what it sounds like. originally came out as SR12 , 5
miles East or West of Interstate 5 . Units rolling included Chief 74 or 7-4
Engine 74 or 7-4 Rescue 28 and Rescue 71 or 7-1 .

anybody familiar with the area know where they units are out of , or have a
better idea of just where crash is. I seem to think its west of Lodi.
but these are not Lodi Fire units.

Topic: 36070 Message: 36094

You answered your own question. You always hear 34-20 around San Rafael right ? that is obviously their beat. Yes, they have designated area of coverage although I can't off the top of my head think of a list , website or book that shows the areas covered. Best idea would be to spend an evening or two monitoring only the violet on one scanner and make notes of where they are being sent. It won't give you exact limits but do you really need them ? I wouldn't think so.

36095. Crash on SR 12 ----------update

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-17 12:38:58 UTC
From: caladded@aol.com
Topic: 36095 Message: 36095

Disregard my earlier question , looks like the units were
from Woodbridge Engine 7-4 7-2 and Rescue 7-1 etc . Still couldn't find
the cross (korea ?) but that ok

36096. demonstration in SF today

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-17 13:09:06 UTC
From: Ed
Topic: 36096 Message: 36096

Some of you may have seen this on news. a bus called # 19 from Jerusalem that was bombed in Israel , is being brought to a rally in SF at Civic Center around 1100 today. Pro - Israleli groups will be there AND expect pro- Palestinian groups as well. this is what just occured in Berkeley on Sunday (www.ktvu.com) Civic Center is in the Northern Police District A5)12976 or A6)13008 but I expect SFPD may handle this on one of the following tac channels

A9) 13104 A10)13136 or A11) 13168

Marin fire is now going through their training cycle
for the MERA radios, they will be changing over soon.
I have not yet been scheduled, but I will be soon.
I'm curious to see how they have their radios programmed
as opposed to how I have my XTS programmed.
J.B. AD6WX
P.S. did you hear during the floods that pallets of the new radios were under water
at the storage sheds up in Novato (the same building that houses SAR Sherriff?)

Roger Strohmeyer <rstroh@...> wrote:

I've also heard of lot's of meetings\changes concerning MERA and Fire. I'm
sure there's more yet to pan out...

> >
> > 46.2000 - San Rafael & Marinwood Fire
> > 46.4000 - Lakspur & Corte Madera Fire

Marin fire agencies are still operating on all the lowband freqs.
This list is outdated by about five years. It's been about that long
since Corte Madera and Larkspur Fire Depts have been dispatched on
F-40 from Twin Cities Dispatch (dispatch is and has been on
F-6/46.50). We still are licensed for 46.40, but never use it.

Novato Fire should be switching to MERA the first week of Feb, though
F-35 (46.36) may be used for awhile for station alerting.

It blocks and RF except the bands that you want, You must know what you want to hear and what you want blocked.
I have THREE filters for my HAM gear I use a PAR Triple Notch filter for pagers(cover the 2 meter band), a DCI dual Band Band Pass filter (2M /70CM) and a DCI Band Pass for 2 meters

no a NOTCH filter and a BAND PASS Filter are not the same and they work differently from each other,

Band Pass will block everything but the band you want, the NOTCH Filter works within the band that you are having problems with to block unwanted noise.

I would try and read the ARRL's Handbook for a better understanding of how these filters work (for I know a little bit about everything and I do not know it all)

Thanks! Hehe that's weird. Hey Roger on a related note, do you or does anyone else know if anyone's tried to make a CHP "beatmap" kind of thing?

I'm not sure whether CHP assigns officers to segments of the freeway like a beat, or if everyone just hangs out at the office and a few cars are out just cruising the entire thing. I'm not even sure why I'm curious since they give their location fairly frequently anyway, but if you stumble onto a conversation that's in progress with "34-20" for instance, it'd be cool to be able to get an idea of where they might be. (I always hear that unit around Central San Rafael.)

It'd be fun to do with Marin County Sheriff too but CHP would be a heck of a lot easier because there're less of them.

How much loss do you get on say the two meter ham band, if you insert a notch filter for 152 MHZ??

From the MRR (Kelty) book, 857.9375 is listed as *gold* and 855.4875 is *green*.

The Marin area parks use 857.9375 *gold*. I haven't listened much to the Marin area state parks since they moved from 44.72. Occasionally, I'll listen to the Southern/Eastern Sonoma area parks on 855.7125 *orange* (Silverado dispatch). The Central/Coastal Sonoma parks are on 858.9375 *gray* (Russian River dispatch).

I would check the PAR website for more info, but it should be less than about 0.5 dB insertion loss, which is minimal. A 152 MHz notch filter should only notch out the high-power 152 meg pager transmissions, which overload the front end on many scanners.

36112. Protesters preparing for execution

Protesters preparing for execution
By Con Garretson
IJ reporter

Monday, January 17, 2005 - Prayers, vigil at San Quentin tomorrow

Death penalty opponents are gearing up to protest outside San Quentin State Prison tomorrow night in advance of the scheduled execution of convicted murderer Donald Jay Beardslee.

Beardslee, 61, has been on death row for 20 years after being convicted in San Mateo County for the murders of two women, Paula Geddling and Stacey Benjamin, in 1981, as part of a drug dispute. He is scheduled to die by lethal injection 12:01 a.m. Wednesday.

Beardslee, who previously served time for a Missouri murder, shot 23-year-old Geddling near Half Moon Bay. He also admitted slitting the throat of Benjamin, 19, after he and others traveled through Marin under the guise of a drug run to Lakeport.

Contrary to recent press reports that Benjamin was killed in Marin, attorneys on both sides of the case told the Independent Journal last week that Benjamin was killed in a remote area of Lake County. One court record incorrectly referenced Marin, they said.

A juror from his trial and a former San Quentin warden had called for clemency. Robert Martinez said he would have voted against the death penalty had the brain damage been revealed at trial, and Daniel Vasquez, who served as warden from 1983 to 1993, called Beardslee a "model prisoner" and called for leniency.

Several hundred people who believe the death penalty is unwarranted under any circumstances are expected to attend prayer services in Marin before assembling outside the prison.

A 25-mile "Walk for Life," which has been held before every execution since 1960, will begin at 7 a.m. tomorrow at the Legion of Honor in San Francisco. Participants expect to arrive at the prison at 6 p.m. after a stop at St. Paul's Episcopal Church in San Rafael.

A prayer service will be at the church at 1123 Court St., at 6 p.m., which has also become a pre-execution tradition.

Marion Cedarblade of San Rafael has taken part in the St. Paul service and prison protest since the death penalty was restored in California in 1978.

"I'm opposed to the death penalty, and it is one way to protest," she said. "More and more people are opposing it. We hope to help change people's minds."

Sister Marion Irvine of the Dominican Sisters' Center in San Rafael said she is among those in her religious order who have documented a request that, in the event she becomes a murder victim, that her killer not be executed.

Irvine has served in the role of "justice promoter" since her order took a formal stance against the death penalty in 2000. The Dominican nuns have hosted a vigil the night of executions since then and also have taken part in protests outside the prison's east gate.

The Dominican Sisters' Center at 1520 Grand Ave. will be open from 8 to 10:30 p.m. tomorrow, when carpooling will begin to the prison.

At 6 p.m., the center's bells will ring for two minutes in protest in accordance with the order's "For Whom The Bell Tolls" campaign. St. Paul's also plans to ring its bells on the hour from 6 p.m. to midnight.

"The death penalty is racist, classist and geographically biased," Irvine said. "Most people on death row are either minorities or poor and couldn't afford the best legal representation.

"Some jurisdictions, such as Marin and San Francisco, don't pursue the death penalty, and you're more likely to get it in some conservative counties in Southern California. We have an execution every couple of years while in Texas they have about five a month."

Irvine said the death penalty has not proved to be a social deterrent to murder. She said arguments that executions are cheaper than life sentences ignore the costs of legal appeals and the reality that most condemned inmates are incarcerated for decades anyway.

Those who turn out at the prison will be under watch by law enforcement, while prisoners inside will be under a customary lockdown for security purposes.

San Quentin spokesman Lt. Vernell Crittendon said protesters will be monitored by a "large contingent" of prison and Department of Corrections agents along with additional officers from the California Highway Patrol, Marin County Sheriff's Office, San Rafael Police Department and Twin Cities Police Authority.

"We're putting our plan together based on our intelligence gathering," he said last week. "We're looking to have 500 to 600 people turn out to exercise their first amendment rights."

Crowd sizes have varied in recent years, from about 100 for Robert Lee Massie in 2001 to around 2,000 for Kevin Cooper, who received a stay just hours before his scheduled February execution. He remains on death row.

"It varies case by case based on the person, the circumstances and their demeanor," Crittendon said. "Massie was resigned to die and did not do much community outreach, unlike Cooper."

The number of security personnel can be "scaled up or down" based on updated information, as happened for Cooper's scheduled execution when the anticipated number of protesters doubled in the preceding week.

Beardslee would become the 11th California inmate to be executed since the state reinstated the death penalty in 1978 and the first from San Mateo County.

The state Attorney General's office has neither scheduled a date nor designated a condemned inmate for the state's next execution, according to Crittendon, who said there are 641 men and 15 women on death row.

From: Erik
Topic: 36070 Message: 36113

In the past, I was told what and where the 34-unit beat zones were. They seemed to have changed slightly over the years, but along U.S. 101, the -10 was south, -50 was central, and -70 was north. -22 was the main coastal unit. They add letters (such as A-Adam, B-Boy, etc.) for additional units in those areas. I can ask again at office #34 for the latest...

36114. san quentin trunked during executions?

From: Jim Gammon
Topic: 36114 Message: 36114

During a couple of past executions, I've listened to San Quentin trunked but didn't hear anything much, any ideas for listening for those of us who don't have digital scanners for the Marin system? I would supposed CHP and maybe low band sheriff. Any info on what may happen on the prison system would be appreciated. Thanks.

36115. Sunnyvale incident

From: Evan Platt
Topic: 36117 Message: 36117

(Can't reply since my original post hasn't shown)

Outstanding is a WFA 5'6 150 Dark brown hair black top (jacket) grey pants red shoes.

And something I'm just noticing since I haven't had a scanner w/o PL until recently - Sunnyvale broadcasts their callsign via morse code. It broadcasts without the PL. And should anyone transmit and interrupt it, it will stop, and then wait a few seconds, then reattempt to transmit it. So now Sunnyvale PD has a Code 22 (that's what Sunnyvale calls their priority traffic only with a tone). So - basically, the morse code would start, it would be interrupted by the code 22 tone, then a few seconds later, the morse ID starts, interrupted by the tone, etc. This went on for a good 5 minutes.

Now a silent code 22, suspect could be AFA.

Units at the Blue Bonnett. ?

I think the best deal is to have a good rig with triple conversion receive and enough filtering to knock out intermod. Unfortunately, I only use HT's of the Yaesu type. Doesn't much matter as I mainly use them on duckies anyway not an outside antenna.

How much loss do you get on say the two meter ham band, if you insert a notch filter for 152 MHZ??

From: Roger Strohmeyer
Topic: 36114 Message: 36126

Hmmm, as far as I know San Quentin has nothing to do with MERA. I'm not sure what the Department of Corrections people use radio or frequency wise but I believe Marin County Sheriffs and CHP will most likely be handling the crowd both of which can be listened to conventionally on 39.24 and 42.16. (or you digitally capable people can listen to sheriffs on the MERA patch TG 45616)

Subject: [bayscan] san quentin trunked during executions?

During a couple of past executions, I've listened to San Quentin trunked but
didn't hear anything much, any ideas for listening for those of us who don't
have digital scanners for the Marin system? I would supposed CHP and maybe
low band sheriff. Any info on what may happen on the prison system would be
appreciated. Thanks.

Went down there during my lunch hour, about 100 on each side, and
about 25 SFPD, and 3 or 4 guys in suits, with ear pieces, seemed to
be israels? walking in the crowd, but never too far from the bus.
tried, but couldn't find out what freq. they were using.
everyone was playing nice at that point.

Ahh, thanks Ben. Before I went digital I didn't have a trunking scanner of any type so I never listened in on these guys. And I had a very unique way of listening to San Rafael PD's conventional trunked system but we wont go there. :-)

I'm going to punch in the San Quentin system now and see if I can pull anything from here on my perch in Terra Linda.

KRON reported no problems , the 2 groups were a good distance from each other . nice to see both sides have their say without the violence .

as far as San Quentin is concerned , they had a few arrests today , mainly from a few blocking the gate. I doubt much will happen , even if the execution is carried out. Usually a lot of people singing , carrying candles making speeches and a little while after the execution they all leave. May be some pro-death penalty people there as well ,but in the past there has been little trouble.

I've been to a few of these protests and they are very somber. It doesn't exactly attact the black bloc crowd, but rather Catholics in good standing. It doesn't get more well behaved than this. The biggest police action involves towing illegally parked cars.

The timing is such that this event can't make the news live (i.e. the time of reported death), so the talking heads just do their thing with the crowd as a backdrop sometime during the newscast.

I brought that question up a month or so ago. Everyone said I was missing the calls or programed my radio wrong.

It seems they are dispatching the calls over the MDT (Mobile data Terminals) and if units are in the field then they seems to send the dispatch over the radio.

I've heard numerous calls where the units just show up on scene or they say "We missed the call can you send to our MDT." Or "Our MDT isn't working can you repeat the call".

2nd alarm at Kaiser Hospital, 1150 Veterans in Redwood City. Sounds like there is a large scale liquid oxygen tank leak in the area of Marshall and Marshall Court. Haz-Mat has been enroute since the first alarm, large cloud in the area. Companies evacuating surrounding buildings.

Control 1 - 153.89
Control 5 - 156.105 (can listen in on FireDispatch.com!)

As this is my hospital (well, ok I don't own it) I know the area pretty well. there is a some residential buildings in the area , but mostly commercial. the tank is to the rear of the ER near the nutrition center in the marshall court. there is a 2nd tank nearby.

seems they are doing shelter in place with the ER which is in the rear of the main building. I wonder , however , if they will divert ambulances for this ?

anyone have an idea of the dangers of a cloud leaking from a liquid oxygen tank ?

Early on, shortly after BC-3's arrival in fact, they did say that they would divert ambulances from Kaiser to other hospitals. 2500 gallons sounds like a lot of liquid oxygen to me, I wonder how long it will take to leak out.

Topic: 36146 Message: 36153

Just some background on cryogenic liquid - oxygen:

The hazards associated with liquid oxygen are exposure to cold temperatures that can cause severe burns; over-pressurization due to expansion of small amounts of liquid into large volumes of gas in inadequately vented equipment; oxygen enrichment of the surrounding atmosphere; and the possibility of a combustion reaction if the oxygen is permitted to contact a non-compatible material. The low temperature of liquid oxygen and the vapors it releases not only pose a serious burn hazard to human tissue, but can also cause many materials of construction to lose their strength and become brittle enough to shatter. The large expansion ratio of liquid-to-gas can rapidly build pressure in systems where liquid can be trapped. This necessitates that these areas be identified and protected with pressure relief. This expansion ratio also allows atmospheres of oxygen-enriched air to form in the area surrounding a release. It is important to note that fire chemistry starts to change when the concentration of oxygen increases to as little as 23%. Materials easily ignited in air not only become more susceptible to ignition, but also burn with added violence in the presence of oxygen. These materials include clothing and hair, which have air spaces that readily trap the oxygen. Oxygen levels of 23% can be reached very quickly and all personnel must be aware of the hazard. Any clothing that has been splashed or soaked with liquid oxygen or exposed to high oxygen concentrations should be removed immediately and aired for at least an hour. Personnel should stay in a well-ventilated area and avoid any source of ignition until their clothing is completely free of any excess oxygen. Clothing saturated with oxygen is readily ignitable and will burn vigorously. Do not permit smoking or open flames in any areas where liquid oxygen is stored or handled. Do not permit liquid oxygen or oxygen-enriched air to come in contact with organic materials or flammable or combustible substances of any kind. Some of the organic materials that can react violently with oxygen when ignited by a spark or even a mechanical shock are oil, grease, asphalt, kerosene, cloth, tar, and dirt that may contain oil or grease. If liquid oxygen spills on asphalt or other surfaces contaminated with combustibles, do not walk on or roll equipment over the area of the spill. Keep sources of ignition away for 30 minutes after all frost or fog has disappeared.

For a really in-depth discussion:

This is a little more concise as to the risk associated with a release of liquid oxygen.

In the event of a major escape of liquid or gaseous oxygen, switch off all electrical appliances in the area concerned and extinguish all naked lights. As a rough guide, experience has shown that in the case of liquid oxygen spillage, substantial oxygen enrichment occurs only within the visible cloud associated with the spill.

Firefighting materials under oxygen rich conditions should be confined to water or fire extinguishers as described in Section 5.4.

A person whose clothing catches fire should be deluged with water from a hose or series of fire buckets, and removed into the fresh air as soon as possible. It is very dangerous to attempt to rescue a person on fire in an oxygen enriched atmosphere, as the rescuer will most probably catch fire himself. (In certain cases it may be possible to enter such a space if the rescuer is totally deluged with water and protected by constant water hosing.)

Bay City News advises that a third-alarm response was called tonight after a 6,000-gallon liquid oxygen tank was found to be leaking at Kaiser Foundation Hospital in Redwood City. The hospital's emergency department was shut down while nine agencies, including the San Mateo County hazardous materials team, isolated a one-square block area between Veteran and Main streets. The flow of liquid oxygen has been greatly reduced, but not contained as of 9:15 p.m according to city Fire Chief Gerry Kohlmann. One person had a heart attack at the scene of the leak, unrelated to the incident, Kohlmann said. Emergency personnel at the scene treated the individual.

Assuming that this liquid o2 tank is installed outside and was installed according to code, a leak shouldn't pose a hazard to anyone outside the immediate area of the leak. Any electrical equipment within 100 feet of the the tank is supposed to be intrinsically safe and the concentraction of oxygen in free air falls to normal atmosphere within about 150 feet, even with a fairly large leak. Most of the leaks are actaully pressure valve failures and the liquid o2 vents through the failed pressure valve. There are are generally two pressure valves so one can be shut off and replaced while maintaining the integrity of the tank. If the tank itself it leaking, there's not much you can do except let the tank bleed off. The big problem would be for patients in the hospital who are on o2. If the tank is leaking, the piped in o2 pressure will drop quickly and they'll have to get a bunch of o2 tanks from somewhere pretty quick.

Written as a former repiratory therapist, who had to learn all about this stuff. <g>

From: jjcooke@yahoo.com
Topic: 36080 Message: 36160

The search was scaled back at 1700 today. There were no substantial clues found and three out of four tracking dogs went to the water. Marin will have their dive team check the area but the water dogs never gave any strong alerts and the area has some pretty nasty currents. The missing person has a history of suicide attempts although none involved trying to drown herself. The land areas were well covered so the assumption is that she's either in the water or outside our search area.

The frequencies used were indeed CLEMARS 1 and 2 plus 155.160.

It was on several news shows. The officer was only slightly injured which is surprising because he absolutely TOTALLY his squad car. Vehicle rolled, maybe several times and crushed the roof. Still, with a little assistance from a guy and his wife who stopped, got out of the car without extraction (I am telling ya, without knowing the story I figure this would be a JAWS situation, but it wasn't)

Vehicle he was pursuing was stolen and got away.

I was wondering LOL..... UPDATE .....fire really got
hold of this place and went thru roof , caused lots of damage , Truck
1 set up ladder pipe and soaked it for a long time. PG&E (as usual)
took their sweet time but finally got there to kill power to the down
lines. They had All Mt.View units plus the M/A units working.

Mt.View E7 (off duty) is manned at Station 1. I am a bit surprized
they didn't man E6 as well. ((only 1 Engine for the entire town ??
hmmmm)

36176. Marin officers plan to use 'bait car' to catch thieves

Marin officers plan to use 'bait car' to catch thieves
By Gary Klien
IJ reporter

Tuesday, January 18, 2005 - Marin County reported 941 vehicle thefts in 2004, a slight drop from 2003 but still well above the theft levels of the 1990s, authorities said.

But police are about to roll out a secret weapon that could alter the picture in 2005 - a bait vehicle that alerts police when it has been stolen and can be shut off by remote command.

"Other agencies have seen significant reductions in the auto theft rate - in the 30 percent range," said Detective Mike Augustus of the Marin County Auto Theft Task Force.

The 941 vehicle thefts, a figure that includes motorcycles and trailers but excludes 19 stolen boats, is down from 966 in 2003, according to the state Department of Justice. The most frequently stolen models were not immediately available.

The 2003 figures represented a surge of about 35 percent over the previous year - and a significant shift from the late 1990s, when fewer than 500 vehicles a year were stolen in Marin.

Augustus said the persistent high level of vehicle thefts could be the result of bad economic times, when property crimes tend to rise. But he also said much of the problem can be attributed to Marin's reputation as a place where residents leave their keys in their cars.

"The most stolen car in Marin this year was the one with the keys in it - time and time again," he said. "The guys I've arrested this year tell me Marin's an easy market. Everybody leaves their keys in the cars."

Next month, the Auto Theft Task Force plans to deploy a "bait" car to attract and trap auto thieves. The task force, overseen by the Sheriff's Office and funded through vehicle license fees and state grants, bought the car from an insurance carrier for $1, then spent about $10,000 rigging it with the necessary equipment and software.

The bait vehicle will alert police when someone steals it, allow police to track it by satellite, and enable police to turn the engine off remotely so the driver can be arrested. Such vehicles have been in use for about a decade at police departments throughout the United States and Canada.

Wayne Johnson, an auto-theft investigator for the Minneapolis Police Department, said vehicle thefts plummeted about 30 percent when the city

first started using the bait cars in 1996. The department uses about a dozen bait cars rigged with cameras, microphones, remote-controlled door locks, motion detectors and global positioning satellite software.

Instead of sending expensive teams of undercover detectives on the street, Johnson can now sit back and wait for the bait car to send him a page when it has been stolen.

"In the old days, you sat on a car all night and spent $1,000 (in payroll) trying to catch one person," Johnson said. "Now you can do other things in the meantime. It costs a bunch of money to have cops sitting out there on a detail, and some departments still do that."

In Tempe, Ariz., a city of 159,000 residents in the Phoenix area, police started using bait cars about two years ago and saw vehicle thefts drop 16 percent in 2003 and 10 percent in 2004, said Tempe police Chief Ralph Tranter. About 2,500 vehicles were stolen in the city last year.

Tranter said it is difficult to tell how much of the decline is because of the bait cars and how much is because of other regional prevention efforts, but he said there is no question the bait cars are a deterrent. The cars are equipped with video cameras, and police release the crime videos to the local media.

"Quite often, it's actually hilarious," Tranter said. "You've got two suspects and they're high-fiving each other, and then you see them look in the rear-view mirror and the expression changes. Those videos are shown on the 6 and 11 o'clock news, and I think it has a tremendous impact."

Come on, didn't you read? It was sold to Marin for $1. So look for a rust / primer painted 1971 Pinto. :)

Seriously, this is the USA. Everything that happens is announced beforehand. I'm surprised they didn't release the make, model and license plate of the car! People would still try to steal it anyway.

Remember Airplane!, back in 1980:

Ted: My orders came through. My squadron ships out tomorrow. We're bombing the storage depots at Daiquiri at 1800 hours. We're coming in from the north, below their radar.
Elaine: When will you be back?
Ted: I can't tell you that. It's classified.

Search for woman winding down
By Gary Klien
IJ reporter

Tuesday, January 18, 2005 - A second full day of intensive searching yesterday failed to turn up a 43-year-old woman last seen Saturday at China Camp State Park in San Rafael.

Park rangers and a sheriff's detective will continue looking for Amy Xu today, but the full-blown search-and-rescue effort of the past two days will not resume unless authorities get solid leads, said Mike St. John of Marin County Search and Rescue, a unit of the Sheriff's Department.

"We felt like we've exhausted everything we could do," he said. "No one has called in any credible sightings at all."

St. John said dozens of rescuers, 10 dogs and several divers and boaters searched from San Pedro Ridge to the bay, but found no sign of Xu.

The search was hampered by persistent fog in the area.

Shortly after ending their search for Xu, the rescue team was called to Mount Tamalpais to find a lost hiker near Alpine Dam. The hiker, who called 911 from his cell phone, was found around 9 p.m.

"It definitely stretches our resources," St. John said.

Xu, a San Rafael resident, was last seen Saturday afternoon at Buckeye Point, a picnic area in the state park. Authorities said Xu suffered from chronic health problems and might have been despondent.

Xu was known to walk with a limp because of a hip injury, leading investigators to believe she could not have strayed far from Buckeye Point.

Xu was described as 5-foot-5 and 118 pounds with a slight build, brown eyes and black hair, authorities said.

She was last seen wearing a blue sweatshirt and white or gray pants with white tennis shoes.

Anyone with information is asked to call 479-2311.

Is this the same pursuit ed? Times are kinda off .. but with yahoo you never know.. your post is at 3:47 am.. news says 12:am... not sure.. maybe a long pursuit?

The San Francisco Police Department reports that it is involved in
a high-speed pursuit, which has led them over the Bay Bridge into the East
Bay at up to speeds of 90 mph, with a vehicle that was allegedly involved in
a shooting in the Tenderloin District early this morning.
According to the police, the incident occurred at 12:16 a.m., in
the 1000 block of Turk Street, for an unknown reason.
When officers responded to the scene a pursuit ensued that led
officers over the bridge, toward Oakland on Interstate Highway 580 and back
to Emeryville.
The California Highway Patrol has joined in the pursuit, police
report.
The number or extent of possible injuries caused by the shooting
is unknown at this time.

Marin SAR isn't on MERA yet. We were using CLEMARS 1 and 2 as well as SAR Primary (166.160). The comms weren't good in the area even after a repeater was set up on CLEMARS 2. The China Camp area has always been a tough place for radio communications.

There were about 30 teams involved in yesterday's operation so it will still be an issue even when Marin SAR is on MERA unless they have 40 or 50 extra MERA portables to hand out to teams. This is pretty unlikely so we will still have to rely on the radio resources bought by other teams. This means VHF simplex since those are the resources available.

Regards, Jim

Hey guys,

It's 16:55 and I just heard KRON 4's helicopter (450.4125 MHz) talking about seeing US Coast Guard boats and a helicopter or two orbiting around the area near Alcatraz. Story is someone fell off a ferry. I'm in a crappy place for Marine band reception and my milair UHF capable scanner is in my mom's car (Doh!) but try listening for them on Channels 21A, 22A and 23A, and the newly revised UHF AM Coast Guard frequencies that were posted on this group about a month ago.

Please let me know what you hear missing the helicopters is torturous for me! lol

CG helo 6505 was on his way down to Moffett to shoot some approaches and got called back for what I'm guessing is this rescue mission. He mentioned to SanFranAir on 345.0 that the rescue wimmer wasn't on board, but they could probably stop back at the airstation and pick someone up.

I haven't heard anything since then, about half an hour ago; there's a fog bank in that part of the bay, otherwise I'd have a visual. I can't see jack :-)

This is precisely what happened, Jordan. Last I heard was that this is an elderly Asian male in the water, but that's about all I can add.

Accountability (i.e. what firefighter is where, who's in a building, where is interior group), etc. among other things.

It's part of the ICS - Incident Command System.

The Forestry Service has a good link for some information on it - http://www.fs.fed.us/fire/operations/niims.shtml

and then click on Incident Command System.

Hope this helps.

Evan

When an incident is started, the dispatch center essentially has "command" until the first unit arrives on scene. That unit then takes command from the dispatch center until either a higher ranking officer takes command or the first in unit gives command to another unit. When the incident is resolved, the on-scene incident commander terminates the incident, and the dispatch center takes command until all units are back in quarters.

The Incident Command System is a very simple, highly scalable way of managing the resources that may be assigned to an incident. ICS is used on incidents from one engine putting out a trash fire all the way to major incidents spanning large geographic areas and hundreds of apparatus and thousands of personnel.

If you'd like to like to learn the basics of ICS, you can take the course presented by FEMA at http://training.fema.gov/EMIWeb/IS/is195lst.asp

I believe the SAR primary freq is 155.160.

Also, even when MERA is in full operation, larger scale fire/SAR incidents will most likely be run on simplex conventional VHF/UHF freqs. The Marin wildland fire plan already addresses the initial assignment of VHF high-band freqs for tactical/fireground radio comms for large fires. This is because it is easier for outside mutual aid agencies to operate on established statewide freqs.

It is also in the works for a MERA/conventional interoperability *device* (kinda like a cross-band mobile repeater unit) to be available for large-scale incidents.

From what I know, the agencies currently on MERA are: Novato PD, San Rafael PD, San Rafael DPW, San Anselmo PD, Fairfax PD, Twin Cities PD, Mill Valley PD, and all ambulance-to-hospital radio contact. I'm not sure if the DPWs of Novato, San Anselmo, and Fairfax are on it yet. There are also a few other misc users on the system, too (jail?). I'll give it a listen at work and see what I can find.

Also, Marin Co Sheriff and Marin Co Fire will probably be the last agencies to go to MERA, as the issue of the Bolinas radio site is unresolved. This greatly affects both agencies.

Correct, my brain wasn't as fast as my fingers. <g)

> available for large-scale incidents.

Indeed, as I wrote, mutual aid agencies will be bring in their radio caches which are primarily VHF simplex with the ability to operate on temporary repeaters also. I know that MERA already has a patch in place for some agencies (CHP and Sonoma S.O. helicopters are two that come to mind) and I assume that the goal of all agencies will be to eventually have some sort of interoperability patch. How well this works out in real life remains to be seen.

Regards, Jim

no , didn't record the pursuit ....sorry (didn't hear it until they were in Oakland)

dumb victim. some S*** for brains guy just had his 99 pearl white Lexus SUV taken in a carjacking on Clarke in EPA. guy went into Eastside market , left the SUV running (as in with KEYS in it of course) comes out to find these two badasses who attack him , beat him and rip off his SUV (which has to be worth ....what , 50K or more)

EPAPD lost the vehicle on Pulgas near Runnymeade....

license......Ca 4DQB980

two BMAs both with gold teeth (they can afford gold teeth , ripping off cars like a lexus SUV !!

2200
Ed NYPD BLUE coming on , see ya

>Can someone confirm - is this a 3-alarm fire now?

Confirmed 3rd alarm, access problems on the exposures.

Just now getting a significant amout of water on it.

Lots of rescues, 2 amr rigs code 3 to the scene.

PD evacuating exposures, now have a medical call on
Bowling Green, trying to get a unit to respond.

Command 4 153.980
TAC 6 153.830

Fireground comms streaming at
radio.scannerbuff.net:8767
on teamspeak server

>anbody know how deep SJ has to be in alarms before Mutual aid sets in?

Santana Row was 11 or 12 alarms.

I think they went mutual aid after 5.

It would also depend on where in the city. If it's on the border
with another agency/city, it may be automatic aid for multiple alarms.

Monitor Fire Red 33.960 156.7ctcss

They give updates to other departments on that ECC channel.

You're too far. Probably won't hear anything unless you're 2-3 miles away
on the command frequencies.

Command 4 is one of the few (only) repeated San Jose fire channels.

You will probably get it in Sunnyvale.

Tac 6 is another story. Strictly simplex.

They seem to be having a problem with command 4 now.. sounds like 2
repeaters keying
at the same time, nobody can hear fireground traffic.

Alvin Com advising he "can't hear the field units anymore since comm
switched the repeater".

Time to invest in that high band beam for Tac channel traffic I guess ;-)

Citizens report of hearing several shots fired broadcast by CHP for officer safety on the "Violet" - 42.16 MHz. I'm sorry but I didn't catch the street, I think it started with a B.

Anyone with a scanner capable of Twin Cities PD on MERA who is awake at this hour please expand on this info. This is an extremely un-common event for that area. 00:56 hrs.

Hey Inigo,

I'm not hearing anything yet on Twin Cities TG 58448...I had it locked out though. Also, it looks as if CHP 42.16 is back to not simulcasting the cars.

I will post if I hear anything important but I will be turning in soon.

Just got back from this fire - one word sums this incident up - UGLY!

Not much of a story to tell, but there are a whole lot of folks with no place to live this morning. I saw the mutual aid units as they arrived, but the photo opportunities were scarce at best.

I think there were more cops than firefighters!

At any rate, I did pop off a couple hundred shots hoping to catch just the right moment when they opened up on this beast with the master stream. We shall see.

ED - Thanks for the nudge ;^) Got to see some friends while I was over there, too!

They called it under control at 0317 hours.....final toll
3 injuried , 1 fire fighter and 2 civilians ......none real serious

10 units destroyed , 53 people displaced.....

channels 2 and 4 had great video (the SAME video) think was really cooking
, showed fire coming out both front and rear of building on both floors.

they also had video of the crash , I believe it was Ben who posted it , in
Alameda..... nasty

one car hit a tree or pole and split in half , the other , a BMW wiped out
big time. they believe they were racing @ 100mph.

body found in bay near Crissyfield was an Asian Man , 91 years old and they
say he was the one on the red/white fleet - Bay Cruise Harbor
Queen.............only 7 passengers (bit cold on the bay huh ?)

From what I know, the agencies currently on MERA are: Novato PD, San Rafael PD, San Rafael DPW, San Anselmo PD, Fairfax PD, Twin Cities PD, Mill Valley PD, and all ambulance-to-hospital radio contact. I'm not sure if the DPWs of Novato, San Anselmo, and Fairfax are on it yet. There are also a few other misc users on the system, too (jail?). I'll give it a listen at work and see what I can find.

Also, Marin Co Sheriff and Marin Co Fire will probably be the last agencies to go to MERA, as the issue of the Bolinas radio site is unresolved. This greatly affects both agencies.

From: Evan Platt
Topic: 36258 Message: 36258

"Sunnyvale fire, engine 4, we need another apparatus to take this call for us, we're having mechanical problems. We're not moving."
"Uhhhhh Sunnyvale fire, engine 4, cancel the last, we're moving."

Wouldn't it be kind of embarrassing to have to get a jump start in front of a persons house who they just helped into an ambulance? :)

At 10:56 AM 1/19/2005, you wrote:
>Ah yes, the glamour of being a first responder - ;^)

And working the Sunnyvale Med unit guarantees non stop calls.

You can tell the good ones (and Bayard is one of them) - you'll hear say Med 7 on a call, and another call will come in, med-8 will be dispatched, and right after the dispatch "Sunnyvale Fire, Med-7, I'm clearing this call, I can take Med-8's call".

Although, I'm betting he's on No-Doz. :)

36264. Quoting on AOL...

For those interested, here are a few shots from the big San Jose fire last night/this morning.

http://www.andromedafilms.com/carosephoto/alvin/alvin_002.jpg

http://www.andromedafilms.com/carosephoto/alvin/alvin_003.jpg

http://www.andromedafilms.com/carosephoto/alvin/alvin_007.jpg

http://www.andromedafilms.com/carosephoto/alvin/alvin_011.jpg

Access, or at least freedom of movement for members of the press was severely restricted by the time I arrived - hence the common perspective for these shots. Wish I had had the gumption to get over there when KRON did :-(

Love that last one Craig! It seems so sureal. But I especially like
how the street sign is light up and there is an "Apartment Avalible"
sign with the apartment ablaze in the background.

What kinda camera setup were you using? Lens?

Hi Tony and Sagar -

Last night I ran out of the house, with some prompting from some guy named ED, and I grabbed the closest camera that was ready for action (meaning in my bag) - the Canon EOS Digital Rebel. I left the big gun at home for this incident (EOS 1D) since it is having some 'issues' at the moment.

As for lens selection - everything was shot with a Sigma 70-200 f/2.8. I did use a fence to steady myself for some of the shots since I wanted to drop the ISO down from 800 to 400.

Glad you guys like the images - thanks for the kind words!!!

Cheers!

Craig

Notice that this evening, you can hear Twin cities, Mill Valley, and SO
on their lowband frequencies but not on MERA.
You can tell that they are rebroadcasting by the fact that you here
them on the lowband just slightly ahead of when you hear them on
MERA (at least I think that should be true, I'm not totally sure
of this though, so I wouldn't take it to the bank).

O.K. I'm hearing Mill Valley again now on MERA.
But I a am hearing them on their lowband channel
a red hair earlier.
Maybe 500 mS
This is weird, as I type sometimes I'm hearing MV on MERA
sometimes not.
I'm hearing them 5X9 +60 on lowband.

****
From: "Michael Wright" <mikeyht220@...>
Subject: TV Channel 5 audio on 161.670

Here in south bay area (mountain view) I can hear the
audio of
Channel 5 on 161.670.
****

I believe what you heard was what's known as an
"IFB" -- Interruptable Feed Back. It's what the
reporters listen to while doing live broadcasts in the
field.

Listen to that during channel 5's news broadcasts &
you'll hear one of the production people back at the
studio control room pass info on to the reporter & que
them for their live shot.

It can be funny to hear when the reporter is
interviewing someone who is giving a longwinded
answer, as the production director will start yelling
at the reporter over the IFB to wrap it up, and if
you're watching the broadcast on TV at the same time,
you'll sometimes see the reporter nod slightly
(acknowledging what the director just said) & start to
get consternated.

You'll hear other IFBs in the 450-451 & 455-456MHz
range (NBFM, 12.5kHz steps).

George,,,,,,,,,,,,,, your move is a good one, obviously you have A7 thru A16 on the left speaker , volume is good . A1,2 and 3 on the right , volume is OK ,not quite as good. good idea to split them

Where is A4,5 and 6.......I would suggest having them on the right speaker if you don't already, that way during a greater alarm you have the IC talking to dispatch on the right and the fireground traffic on the left.

What about the EMS stuff ? right or left ?

again, good move

ED

Tx & Rx on the same freq., Radio to Radio without a repeater, Next ????

"what's a repeater ??? it's just what it sound like it take a signal and retransmits it on another Freq. at a higher power,

Most Walkie talkies are 3 to 5 watts and mobiles are 50 to 75 watts of Tx power, base stations can be up a 100 watts or more

It's a good receiver for what it does if you can get it cheap. It's a Uniden with a pretty tight front end and is relatively immune to intermod. It does MilAir and has good search speed. The downside is that it only does Moto Type I & II trunking and you can listen to either trunked or conventional frequencies but not both. The sensitivity is also not very good which may be directly related to the tight front end. No text tags or TG tags either. If you want it for some dedicated trunking monitoring and the lack of text and TG tags isn't a problem, it's an OK receiver for that. I wouldn't pay more than $75 for one tops though.

Regards, Jim

A-4 + A-6 are on the right.
and NO B-14,15,B-16 (no EMS) I was asked to lock them out, I know it on the list along with OES but they are lock-out also, and as far as holding the command channel it's the plan to use Left for the Tac Channel with a hold during and keep the right running as always

Subject: [bayscan] firefeeds.....SFFD feed

George,,,,,,,,,,,,,, your move is a good one, obviously you have A7 thru A16 on the left speaker , volume is good . A1,2 and 3 on the right , volume is OK ,not quite as good. good idea to split them

Where is A4,5 and 6.....I would suggest having them on the right speaker if you don't already, that way during a greater alarm you have the IC talking to dispatch on the right and the fireground traffic on the left.

What about the EMS stuff ? right or left ?

again, good move

It's actually the other way around. I know for a fact (as I work
with them), that Twin Cities PD has no lowband equipment in the field
(mobiles/portables). They have a *patch* from MERA that is re-
transmitted from an old lowband base radio at dispatch. The patch was
supposed to be taken down a month or so ago, but I don't think the
Motorola techs have had the time to do so.

It's actually both ways around, depending on the agency. Marin County Fire, for example, is still completely on low band but has a patch that rebroadcasts through MERA. Until the Tiburon tower is up and working, there will still be a crazy quilt of MERA and low band frequencies with patches in both directions.

Date: 2005-01-20 19:39:29 UTC
From: Ed
Topic: 36293 Message: 36293

this subject was brought up the other day. SFFD staffing is as follows

Engine Companies One officer + fire fighters , some Engine companies one of those fire fithers is a parmedic. the officer is a Captain 1 out of 3 days , the other 2 its a Lieutenant(same on the trucks and Rescue Squads)

Truck Companies - One Officer + 4 fire fighters .

Rescue Companies 1 & 2 - One Officer + 3 fire fighters.

In the 60s- 70s Engines were 1+ 4 and the Trucks 1+6 , the Rescue Squads 1+4 . They also had 4 Salvage Companies that were 1+3

The " Big House " was at Drumm and Sacramento and had the following Division 1 Engines 1 & 12 Truck 13 Salvage 3 Hosetender 1 and Valve Wagon 1 for a total of 25 personal PER shift. how would you like to be the cook for THAT crew !! this was in the 60s . Station is now # 13 and only has Engine 13 Truck 13 and pollution Control unit 1 with a total of 9 personnel.

I have to correct my earlier post about Twin Cities and
Mill Valley. I went to both today to check our radios
and was able to pick up the UHF from cars and portables.
Both are now up and running on MERA.
I pulled our antenna feeds in MV and it was very strong.
Twin Cities does not seem to be rebroadcasting on the
old channel. BUT, I still am only getting about half of the
Mill Valley transmissions on MERA yet I'm getting all of them on
the old low band.

Yup.. heard med-91 traffic once.. A ambulance requesting another code 3
ambulance to the scene... Conversation went in circles, something like:
"Med-91 <unit>, We need another code-3 rig here to the scene."
"Copy that, <unit>, what's the nature of the request?"
"Ummm.. we need another rig here code 3!"
"We copy, I need to know the nature of the request."
"Uhhh we ... uhh... need assistance. One more code-3 rig please."
(Supervisor comes up on air)"What is the nature of your need? Do you need
PD? Are you code 4? Do you have another trauma patient?"
"Umm.. No... We.. uhhh.... locked ourselves out of our rig."

I bet they never heard the last of that one.

I saw in the rig there's like an emergency start button. Is that a second
battey or something? Did that not work for you?

What talkgroup is MCFD F-4 being patched into? I'm looking for the actual MERA talkgroup name, not the ID #, as I only have a system XTS3000 radio to listen to the system on.
I know that District Fire (F-6) is patched into the SAF [Southern Area Fire] talkgroup.

Nice to meet Craig T. at the scene on Dandini Circle today! Like Craig said, this was a small, but smoky kitchen fire.

Not much to share in the way of exciting images as this was another instance of San Jose Fire hitting it fast and keeping it small! Mostly just some apparatus shots:

http://tinyurl.com/4j63p

http://tinyurl.com/5xpz9

http://tinyurl.com/7xey3

http://tinyurl.com/6hxdl

http://tinyurl.com/6vjs5

Pretty quiet shots, but definitely should make the homeowner pretty darn grateful!

Cheers!

Hey Erik,

So you are looking of the frequency associated with a certain MERA talkgroup? That's not a problem... but I don't know of anyone who has a list of "actual" talk group names except maybe the county of Marin technicians working on MERA or possibly the latest Kelty frequency book which I don't have a copy of yet. On the MERA list I maintain I just jot down in a word doc what the TG number is and what I hear in the conversation as whether it sounds like PD, FD, Paramedic, Pizza delivery, whatever. I have no "actual" accurate list of TG names but I've got a pretty good start with the one I have\maintain.

Hope this helps,

-Roger

What talkgroup is MCFD F-4 being patched into? I'm looking for the actual MERA talkgroup name, not the ID #, as I only have a system XTS3000 radio to listen to the system on.
I know that District Fire (F-6) is patched into the SAF [Southern Area Fire] talkgroup.

Like Roger said, you're going to have to talk to your MERA rep or a radio tech to get the actual system affiliation information. The TG numbers and ID's are no problem but system affiliation information is going to have to come from someone who has access to that data.

Regards, Jim

36317. Duped Officials OK'd GGB Suicide Film

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-21 09:35:37 UTC
From: Robert W. Sanford
Topic: 36317 Message: 36317

I thought some of you might find this interesting since its our back yard:

Duped Officials OK'd GGB Suicide Film

SAN FRANCISCO (AP) -- The film project was proposed as a "monuments documentary" intended to "capture the grandeur" of the Golden Gate Bridge.

But after a year, filmmaker Eric Steel ended up with footage of 19 deaths and several attempts by people who wanted to end their lives by jumping off what is regarded as the world's No. 1 suicide landmark.

Bridge officials who approved the filming are now furious at Steel, saying he lied about his project. They are looking for ways to see the footage and possibly prevent him from showing it.

"It's unprofessional to have misrepresented a project," said Mary Currie, spokeswoman for the agency that administers and maintains the famous bridge.

She said if Steel lied about his project, he might also have lied about what he filmed.

"It's an invasion of privacy. It's grim. It's a tragic thing," she said. "But if he wants to show someone jumping off the bridge, he's entitled to do that."

Reached Wednesday by email, Steel refused to comment, citing ongoing "discussions with the bridge district authority."

The Golden Gate National Recreation Area, which manages the piece of property where Steel set up a digital movie camera, issued him a $65 permit in December 2003, spokesman Rich Weideman said.

Quoting Steel's application, Weideman said the filmmaker wrote that his video was intended "to capture the powerful, spectacular intersection of monument and nature that takes place every day at the Golden Gate Bridge. ... It will be the first in a series. Future projects will focus on the arch in St. Louis and the Statue of Liberty in New York."

Weideman said it's possible Steel began filming the project he proposed, then caught a suicide on tape and changed his plan.

"We kind of want to think of the good in the person rather than the grim background that's coming out of this," he said.

In light of the controversy, the recreation area is re-evaluating its permit policy, he said.

The Golden Gate Bridge has served for decades as platform for suicide jumpers. An estimated 1,200 people have committed suicide there since it opened in May 1937.

Steel revealed the true nature of his project after he completed filming and his permit expired on Dec. 31, Currie said.

"He's now come to our agency and asked to film our staff ... do interviews with our people," Currie said.

Steel sent her an email after she asked for a written proposal.

"I believe the film will allow us to see into the most impenetrable corners of the human mind and challenge us to think and talk about suicide in profoundly different ways. It is a movie about the human spirit in crisis. It is a movie about people," Steel wrote.

Steel said he filmed nearly two dozen suicides and "a great many of the unrealized attempts."

He also said he recorded nearly 100 hours of interviews with families and friends of the jumpers, witnesses who were walking, biking or driving across the bridge or surfing or boating beneath it, psychiatrists and "several of the attempters themselves."

He said his intention is to make "an independent, feature-length film that I can show at a major film festival. Beyond that, I have no distribution plans -- only hopes."

Currie said the bridge district is evaluating Steel's request to interview employees.

yeah, its interesting alright , I don't know how many people want to watch people jumping to their deaths .

you know whats REALLY obscene about the bridge is that the board of directors include people as far north as Del Norte County . absolutly ridiculous , 19 people on the board which should only have people from SF, Marin and maybe a few other " bay area " counties like Sonoma , San Mateo , Alameda .....

we are ALL paying for those extra people everytime we cough up the Five bucks toll.

Hey Ed -

FROM KNTV

Fire Call Reveals Major Pot-Growing Operation

A minor electrical problem turned into a major drug bust for San Francisco police Thursday night.

Firefighters stopped at a home in the Sunset District late Thursday night as they drove by and saw sparks coming from the garage. The firefighters called police when they smelled marijuana as they opened the door to the house.

Officers found hundreds of marijuana plants, with every room in the three-story house filled with the plants. Elaborate electrical wiring and timers were set up throughout the house. Police suspect the heavy load on the electrical system triggered the small fire, which was confined to the electrical box.

Several bags of dried marijuana buds were also found in the residence.

Police called the setup part of a sophisticated marijuana growing operation.

Nobody was living in the home, and no arrests have been made yet.

This is a good tax dodge. I can steal from the rightful owner every January 1, return the property on December 31, and then steal it again on January 1, never having to worry about breaking the IRS code. Thanks, Evan, I'm looking at my neighbor's riding mower in a different light. <g>

"Was That a Burglar Alarm? Nah....

SAN FRANCISCO (Reuters) - Police in a prosperous Californian city near San Francisco will begin ignoring most burglar alarms, prompted by too many false alarms and too little money.

Fremont police said the overwhelming majority of warning signals they receive are false alarms that cost the city $600,000 a year. Because of budget cuts, starting next month they will only respond if they have additional verification, such as a video feed of a crime occurring or a witness report. "

so does that mean if I set off the alarm while burglarizing the place, then the police will not respond?

On a serious note my cousin, a deputy sheriff in Albuquerque, says his laptop constantly generates messages of burglar alarms which all have been false alarms "What am I supposed to do, constantly drive from one house to another in the rich neighborhood? Ignore other parts of the beat?"

Mike

I don't have time to post all of the details, but Santa Clara has called a second alarm for a residential structure fire on Esperanca Avenue in the northern part of the city. Mutual aid has been requested to backfill stations as the city is wiped out.

San Jose is sending a mutual aid response.

Santa Clara Fire is working this fire on talkgroup 304 and San Jose is staging at the Santa Clara Fire Training Center at Scott and Walsh to handle additional calls.

I'm out of here - already had to switch flights to Seattle...everyone have a great weekend.

This is also really convenient for the city because all of the city buildings are protected with alarm dialers that go straight into PD dispatch so they will still respond to their own buildings but the taxpayers will be unprotected even though they alredy have paid for alarm permits. To protect and serve?

This should be a huge boon for the private patrol industry, or an add-on of rent-a-cop response or IP video confirmation to your alarm service.

The burglary industry must be salivating at this one...

Guess it's MUCH more important to make those 4000a stops which generate revenue, than
to respond to alarms (where you get fined if you have too many false ones anyway).

But, when you're wasting your time on countless false alarms, what about the citizens really need the police? And burglars know there's a lag time. There's such a delay between the time an alarm is activated, the alarm company makes the call to the police (sometimes after calling the owner to see if they want the police called) and we go 97, the thieves are long gone. I think the biggest mistake was announcing they won't be responding.

This reminded me of the time when I got called out by FPD to secure
a private business they had discovered an unlocked front door at a
paint store on Fremont blvd and could not find a responsible party
to secure it so now they were stuck with the responsibility and
wanted to get back to work they called me out to chain it up or
something well there is no way to chain up panic hardware from the
outside so I got my pick set out and "Picked" the lock closed I was
the hero of the moment!

I agree regarding the alarm service , if PDs won't go unless they have something confirmed , the subscribers should insist the alarm company maintain personnel respond immediatly to check the premises . In addition NOT with ETAs like PG&E of 45 minutes + either .

I once had a ham radio that tripped off the theft alarms at .. was at that time I believe Tower Records or Warehouse Record store. Don't recall what frequency or what radio. I was outside and transmitted and it tripped the alarm.

As a follow up to my earlier post , with thanks to Tony & Milt for corrections.

Station 13 also has a medic unit and has an unmanned unit ...CO2 and NOT the pollution control unit......its at Station 20

the present "big house" is probaby 7 . at 19th and Folsom with Division 3 , Engine 7 , Truck 7 , Medic 7 and Rescue 2 . it also has Attack Hosetender 7 which is unmanned. this gives the house 17 personnel per shift. The Division of Training is also here. Those who live in the city , or fairly close by and are interested......this is where the Fire Reserve trains and I am sure they are looking for some more good men (or women) they are there most Thursday nights around 1900 hours.

Yup.. heard med-91 traffic once.. A ambulance requesting another code 3 ambulance to the scene... Conversation went in circles, something like:
"Med-91 <unit>, We need another code-3 rig here to the scene."
"Copy that, <unit>, what's the nature of the request?"
"Ummm.. we need another rig here code 3!"
"We copy, I need to know the nature of the request."
"Uhhh we ... uhh... need assistance. One more code-3 rig please."
(Supervisor comes up on air)"What is the nature of your need? Do you need PD? Are you code 4? Do you have another trauma patient?"
"Umm.. No... We.. uhhh.... locked ourselves out of our rig."

I bet they never heard the last of that one.

I saw in the rig there's like an emergency start button. Is that a second battey or something? Did that not work for you?

Well, spur of the moment, who knows, but my initial thought would probably
be 'stick around'.

I mean it would probably be easier to explain to the cops (and show them)
that you were simply there and transmitted, and the alarm went off v.s. the
alternative:

Alarm goes off. Someone sees you in your car leave. Police show up, person
gives your description and license to police. Police then track you down,
you have to explain, at gunpoint, why you were seen leaving the bank with
the alarm going off.

Just my .02. :)

I for one would appreciate it if you not do that.

Reason being, and sorry to rant here people - When I hear my car alarm going off, I see what it is - i.e. threw a football that hit the car? Did a car with a modified exhaust drive by that rattled the car?

And especially if I'm not within hearing range of my car, I would hope that someone would go and see why my car (or any other) car alarm is going off.

Problem is people are getting desensitized to it. Car alarms go off so often because of two way radios, cars with obscenely loud bass, etc.

So, please, don't go around intentionally setting off car alarms. I don't know if you're setting them off because you're running too much power, or the radio is incorrectly grounded, or what, but I've driven around town using my 2m mobile on low power, and never set off a car alarm.

I'm sure you have an alarm in your car, don't you?

Wouldn't you want someone to take a look if they hear your alarm going off?

I was tempted, however it was an additional $150 - $200, and I was told the
range was very limited, i.e. if you were in a mall, it would be useless.

Do you or anyone here have one and have a idea of the range of them?

As I said in another post, Novato Fire goes MERA on (or around) Feb 7.
This means that all other Marin fire agencies will have MERA
portables for mutual aid into Novato. Novato will continue to carry
46 MHz portables for mutual aid responses to the rest of Marin.

TRACON (Terminal Radar Approach Control)
TRACONs are facilities containing radar operations from which air traffic controllers direct aircraft during the departure, descent and approach phases of flight. One TRACON can handle the air traffic for several different airports in its sector. The airspace of a TRACON has various dimensions depending upon its location within the US, and the size and number of airports it serves.

The TRACON controllers direct aircraft that are transitioning from the en route phase through to the approach phase into a destination airport located within the TRACON's airspace. There is more than one controller position in the TRACON. These positions are designated as follows:

high altitude descent controller
low altitude descent controller
approach controller
feeder controller

Typically a series of TRACON controllers direct an aircraft through two stages of descent (high altitude to low altitude). The high altitude controller will hand off the aircraft to the low altitude controller who then hands off the aircraft to the approach controller. The approach controller merges the many descending aircraft flying toward the same destination airport into one line of air traffic maintaining safe separation. When the aircraft reach about 50 miles outside the destination airport the approach controller performs an electronic transfer and hands the aircraft off to the Feeder Controller. Once the arriving aircraft are within the airport's airspace, they are handed off to the Local Controller located in the airport's control tower. The aircraft are then no longer being monitored by the controller's in the TRACON.

TRACONs also control an aircraft that is transitioning after takeoff to the departure phase until the flight is handed off to the Air Route Traffic Control Center (ARTCC) for its en route phase. The Departure Controller in the TRACON routes the ascending aircraft immediately upon takeoff via a preferential departure route (PDR) leading away from the departure airport.

The TRACON controller directs the movement of aircraft in and out of that airspace by monitoring a radar screen and maintaining voice contact with pilots. Although the controller's individual responsibility is only for his or her assigned sector, all controllers within a TRACON have full radar information on all the aircraft that are under control of the entire TRACON facility. In addition, these controllers are able to communicate with one another instantly- something that contributes significantly to assuring the safety of aircraft passengers.

And when you buy your marijuana, make sure you report it, as it's taxable.

http://www.ksrevenue.org/perstaxtypesdrug.htm

"The fact that dealing marijuana and controlled substances is illegal does not exempt it from taxation. Therefore drug dealers are required by law to purchase drug tax stamps.

The drug tax is due as soon as the dealer takes possession of the marijuana or controlled substance. Payment of the drug tax will purchase the drug tax stamps. Attach the stamp to the marijuana and/or controlled substance immediately after receiving the substance. The stamps are valid for 3 months. Drugs seized without stamps or having expired stamps may result in criminal or civil penalties which may include fines, seizure of property or liens against real estate.

A dealer is not required to give his/her name or address when purchasing stamps and the Department is prohibited from sharing any information relating to the purchase of drug tax stamps with law enforcement or anyone else.

Purchasing drug tax stamps does not make possession of drugs legal."

Gosh, are they serious??

I wonder if anyone has ever come in to buy their drug tax stamps...

From: inigo4688
Topic: 36366 Message: 36366

Hey guys,

I was listening to a TG a second ago that I haven't found recorded anywhere yet. The 02-XXX means its most likely police, and it's in the 02-08X range, which also includes: OPD Command 1 and Command 2, Phone 1 (a phone patch?) and Ranger Ops. Can anyone confirm what this TG is?

If not, I'm pretty sure it's OPD NARC (and it's gone silent or I wouldn't post out of respect for the undercover officers). The two guys were talking in very hushed voices the whole time and doing surveillance somewhere on Broadway. Narcotics seemed likely because they had a long conversation about something along the lines of how the whole area they were in liked to smoke dope.

Surveillance is never very riveting to listen to, but as I can't find the TG in any other lists I figured I'd let everyone know. It's pretty cool to stumble on stuff like this, but if I'm breaking some list rule or something by accident by posting it let me know.

Personally, I have never seen those maps anywhere except on baymilcom. They have Oakland center high and low altitude. My only regret is I wish they were scanned just a tad higher in resolution. SFO isn't a radio site. The closest site to the bay area is on Mt. Tam. There is no fence around the radio sites if you are so inclined to see them up close and personal. [The radar site is fenced off.]

36372. Re: Bay Tracon??? Now NorCal TRACON (A little long)

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-22 07:49:40 UTC
From: inigo4688
Topic: 36357 Message: 36372

Hehe Eddie now you're speakin my language man!

NorCal TRACON is in Sacramento near the Mather airport. They basically did the same thing that happened with SoCal combining the LA and San Diego areas into one building (by MCAS Mirimar), and combined Bay TRACON with Stockton, Sacramento, Monterey and a few huge chunks of some ZOA low altitude sectors at and below 15,000 ft.

Each sector has its primary VHF frequency, along with its UHF AM parallel frequency for military aircraft in parenthesis (), and the few in brackets [] are backups for subsectoring due to traffic overflow or facility equipment problems.

Here you go:

NorCal TRACON (NCT):

Area - A: San Jose and Monterey

Hooks - 135.20 - (379.10) - Moffet Field Final
Toga - 121.30 - (275.35) - San Jose Approach/Departure
Licke - 120.10 - (290.25) - San Jose Approach Final
Fremont - 133.00 - (251.15) - Monterey West Approach
Seca - 127.15 - (387.00) - Monterey East Approach

Area - B: SFO arrivals

Boulder - 133.95 - (317.60) - SFO North & West Arrivals Feeder
Foster - 120.35 - (251.05)
Niles - 134.50 - (338.20) - SFO East Arrivals Feeder
Woodside - 135.65 - (310.80) - SFO Approach Final

Area - C: East Bay and Stockton

Grove - 135.40 - (354.10) - OAK Approach Final
Mulford - 124.40 - (351.80)
Valley - 125.10 - (363.20) - Modesto Area
Castle - 120.95 - (269.45) - Merced Area
Tracy - 123.85 - (278.30)
Sunol - 124.80 - (263.15)

Area - D: North Bay

Diablo - 127.00 - (298.95)
Richmond - 120.90 - [128.32] ? (323.20) - SFO/OAK East Departures
Sutro - 135.10 - (307.20) - SFO/OAK West Departures

Area - E: Sacramento Area

Buttes - 125.40 - (259.10)
City - 125.60 - (385.50)
Delta - 125.25 - (257.90)
Elkhorn - 134.80 - (270.25)
Expo - 127.40 - (317.50)
Sierra - 119.10 - [284.00] - (269.00)

I hope you enjoy, if you have specific arrivals in mind email me off list and I'll set you up with the appropriate sectors and frequencies.

-Inigo

P.S. For ED and everyone else who's curious -

The Oakland ARTCC in Fremont is an Enroute air traffic control center for airplanes at or near their cruising altitudes. All the air traffic controllers sit in front of DSRII radar screens and talk to aircraft within their sector (which is a box of airspace that they control) from a variety of remote controlled radio towers called RCAGs scattered around northern california (and all the towers are linked to the ARTCC in Fremont via microwave relays, as are their radar sites). All these sectors border eachother inside the boundaries of the ARTCC (basically northern CA plus western NV), and some are seperated by altitude, for example low alt sectors control up to 23,000 ft and hi alt gets everything past that).

The controller will tag up their blip on the radar with the aircraft's information, and follow it along making sure there are no conflicts with other aircraft until it leaves the boundary of their sector. When it does, they initiate an automatic computerized "handoff" to the next controller (simply a few keystrokes to let them know they have a new airplane), and when the next controller down the line accepts the handoff the first controller will tell the aircraft to switch to the next controller's frequency. Because it's all computerized, an Oakland Center controller covering the Fresno area can hand an airplane off to the Los Angeles Center controller covering the Mojave desert just south of there, and the process is so effortless that it would never occur to the pilot that the first guy was in a dark room in Fremont, and the second was in a dark room in San Diego. :)

The national air traffic control system is just a big ballet act of coordination, and the men and women who work for the FAA as air traffic controllers do a damn good job at it.

Go to your local airport and visit their flight shop. Look for a
VFR Terminal Area Chart that covers the area you're interested in.
It'll show both UHF & VHF freqs with their respective boundary lines.

But don't act like a terrorist, or they'll report you! :-)

You can also obviously buy maps online from places like
http://sportys.com/

> Look for a VFR Terminal Area Chart that covers the area you're
> interested in. It'll show both UHF & VHF freqs with their
> respective boundary lines.

I don't think the maps have boundary lines, but you can get the general idea of where the sectors are. Note that this will just show you TRACON zones/frequencies, not CENTER frequencies.

If you check the archives, we've covered this before. But in case everyone is too lazy, my solution is to make alarm companies pay for false alarms. My alarm has gone off several times in the past and it was always a problem with the alarm or the way it was installed or whatnot. Don't get me started on alarm installers :-)

Make the resident pay. That's what is usually done.

That's counter-productive. If it's the alarm company's fault, there's probably no way for the homeowner to get the fine back. But if it's the user's fault, the alarm company can charge them back or ultimately drop them from the system: if you can't maintain your alarm system, the company has no business providing monitoring for you.

Also: this means there's 3-4 places the city can bill rather than hundreds of individuals who may not pay it, so there's a big department for collections and software to track it and ...

My way is simpler and better for the city.

Most cities require an alarm permit. With so many alarm companies (Joe's Alarm Comapny, etc), it's much easier to bill the resident (i.e. PD responds to 1234 anywhere street, false alarm, bill 1234 anywhere street. With alarm companies a dime a dozen, what is say Sunnyvale PD going to do when they get a call "Hi, reporting a front entry break in alarm at 1234 Anywhere street." "Ok, standby. What is your alarm companies billing address?" What about those auto dialers you buy at Radio Shack that call 911 with your pre-recorded message?

I don't forsee a mass of PD's billing the alarm company. Would put too much liability on the alarm companies, and they wouldn't agree to it. Too many mom & pop alarm companies too.

>My way is simpler and better for the city.

There's an old saying....

Opinions are like ... <grin> :)

They do? Then it's worse than I thought. :-)

FWIW, Oakland and Berkeley don't. That's my experience.

> what is say Sunnyvale PD going to do when they get a
> call "Hi, reporting a front entry break in alarm at 1234
> Anywhere street." "Ok, standby. What is your alarm companies
> billing address?"

I get the feeling from listening to this stuff that there are a small number of alarm companies and that they all have relationships with the dispatch centers (for instance, there's a way to authenticate the incoming call). But if you're saying that it's just random and arbitrary, okay I believe you. I looked in the yellow pages just now for Berkeley/Oakland and there are about 7 of the big monitoring companies -- ADT, Bay Alarm, Sonitrol, Sentry Alert, etc. -- and a LARGE list of installers and people who will sell you do-it-yourself kits, but like I said: I only really hear alarm calls coming in from the big guys. Maybe I don't listen enough ... *shrug*

> What about those auto dialers you buy at Radio Shack that call
> 911 with your pre-recorded message?

Well sure, but I don't get the feeling that this is the problem. All the ones I hear are from the big companies. When a call comes in for OPD or BPD, they say who the alarm company is. I've never heard mom-n-pops or anything like "some small-fry monitoring company" ...

> I don't forsee a mass of PD's billing the alarm company. Would put
> too much liability on the alarm companies, and they wouldn't
> agree to it.

Well, then there's your solution! I think the alarm company should take responsibility for this thing. If they won't, they can't call dispatch. It's the basis for their business, fercryinoloud.

> Too many mom & pop alarm companies too.

I thought there were only a small number. Who would be crazy enough to trust a mom-n-pop for alarm monitoring? Anyway, that just gets me back to it: if you're gong to monitor, you should take responsibility for it. If there are permits to be gotten, the monitors should be getting them.

Topic: 36391 Message: 36396

Just the Facts Mamm
The City of Fremont has had a False Alarm Ordinance since March '98
The following is cut from that ordinance....
"The initial permit costs $40.00 and is valid for two years. The
permit must be renewed every two years at a cost of $20.00. The
revenue generated from these permits is used to help defray the
costs of equipment and personnel to administer the ordinance and,
more importantly, to train alarm owners.

The alarm ordinance also encourages accountability and
responsibility by charging alarm owners for false alarms. Two (2)
false alarms in a 12 month period are allowed and will be responded
to without any charge. Citations will, however, be issued after the
second false alarm. An alarm user who has more than three (3) false
alarms in a 120 day time period may also be billed for excessive
police service."

Personally I think this new policy (No response)reflects a lack of
focus on the
responsibility to serve.

This new policy also conflicts with the dept's core mission
statement below.

"The Police Department is responsible for the safeguarding of
citizens' lives and property, the preservation of constitutional
rights, and neighborhood problem solving."

Yeah, sounds like it's a total loss.

http://kcbs.com/pages/kcbs/news/news_story.nsp?story_id=63741107&ID=kcbs&scategory=Computers
Source: kcbs
Publication date: 2005-01-22

(KCBS)--One of San Rafael's oldest and most popular landmark buildings went up in flames in a five-alarm fire early this morning.
City spokeswoman Lydia Romero tells KCBS firefighters received a call around 1:30 am that the Salute restaurant at the corner of Third and Tamalpais, was burning.
"This restaurant has been in San Rafael for a very, very long time. In fact the San Rafael City Council in the sixties used to enjoy dinner there after a city council meeting. The building was built in 1911 so it's one of our older buildings here in San Rafael," she said.
By the time fire crews arrived, flames were shooting out of the windows. The building, which housed the restaurant on the first floor and several businesses on the second, was a total loss.
The fire started in the early morning hours when nobody was inside the building so there were no injuries.
Firefighters must clear debris to determine the cause of the fire

From: inigo4688
Topic: 36402 Message: 36402

Heard OPD pursuing a suspect at 100 + mph weaving in and out of traffic on southbound I-880. Talk of CHP taking over if they can verify which unit is in pursuit (this is funny normally it's CHP who complains about not being able to talk directly to local PD during a pursuit). Argus 1 overhead but probably letting H30 take over.

Oakland PD Patrol 3 - 02-023

Unsure the CHP freq I'm out of range:
CHP Bronze? - 42.12
CHP Aqua - 42.62 (I think this is it)

Well, the way it stands now, Marin County Fire will be the last fire agency to switch to MERA. The Bolinas site is still being negotiated, and that is an important one for MCFD and the MCo Sheriff. MCFD has to have the Bolinas site operational to be able to switch. If Bolinas is up this summer or fall, MCFD will wait until after fire season to go MERA. It could be this time next year that they go. Until then, it's 46.28/F-4 for MCFD.

Ross,

Everything you wanted to ever know about the Marin Emeregency Radio Authority can be found at http://www.meraonline.org/ . You can also do a Google seatch and find hundreds of references to MERA's past and present challenges.

Regards, Jim

Is this a county by county ID then? I know Mountain View is 18 and Palo Alto is 6, so that jives, but I thought it was a statewide ID - i.e. there's no other 18 in California. But if 6 is foster city and palo alto, that wouldn't be statewide. :)

No, some think there is a statewide numbering system but I think its obvious by the depts I list there isn't.

If you look closely at San Mateo's' it starts with Battalion 1 in Menlo which is the southern most FD to Battalion 20 in North County FPD which is the northern most. (for new people, North County Fire is the new Fire Protection District composed of Daly City, Pacifica and Brisbane Fire Depts.

You notice Alameda County likes the 4 digits set, Oakland within the county goes along with it and it TOO goes via a direction but this time north to south ([i.e. Berkeley with 22xx units to Newark with 39xx units. Still, Hayward does not go along with it as their BCs are single digits. Interesting Berkeley, while not on the ALCO TRS goes along with the numbering scheme while Hayward does neither.

SFFD and SJFD do their own thing. San Jose' chiefs are the same numbers as the Engines or other units in their quarters while San Francisco's' do NOT match.

For those interested. SFFD lists........

Battalion 1 w/ E2 T2 Battalion 2 w/ E36 Battalion 3 w/E8 T8 OR E48 (somebody)? Battalion 4 w/ E38 Battalion 6 w E11 T11
Battalion 7 w/ E31 Battalion 8 w/ E40 Battalion 9 w/ E15 T15
Battalion 10 w/ E9 T9

The 3 letter system is for strike teams as goes by protocol as designated by the ICS system. San Jose for instance is SJS. that is statewide and I can't find where list is but I KNOW its here on the net' somewhere, full list of all depts with the 3 letter designators.

In the places where there is an organized numbering system, typically
the county Chief's Association has agreed to a structure.

Many counties have 4-digit numbering methods. Many have countywide
station numbering. The delineator is now the 3 letter agency ID (with
CA- in front of it for interstate incidents).

Hmmm. Maybe some of the depts near the OR or NV borders use the CA
prefix on their vehicles? For most of the other depts in the state,
it would probably be useless.

You won't see it on the rig. It appears in the tracking documentation
at the incident base and at the Comm Centers. It can happen that Nevada
Division of Emergency Management (NV-DEM) resources end up working in
Florida (FL-DEM) on hurricanes.

Anyone catch a car chase this morning around 6:25 am with SJPD chasing a Blue Dodge Ram?

I saw the Ram doing about 80MPH on north 680 and an SJPD unit shadowing him to get his speed and then pull the dodge over. The guy started to pull over in the center divide, to which the officer made him go to the right shoulder. I thought nothing more of it, until I saw the truck zoom past me to get off onto Capitol Expw with the SJPD unit hot on his rear with lights and siren.

Sunnyvale always seems to do this. Priority incident traffic stays
on main channel, they move the routine traffic to secondary. Maybe
that way the pri traffic doesn't get "left behind" in the switch??

36438. Marin County District Fire Apparatus?

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-25 04:05:07 UTC
From: inigo4688
Topic: 36438 Message: 36438

Hey guys,

I've been trying to put together a list of the rigs that are dispatched on Control 6 (46.50 MHz). Below is a list of what I have right now, but it's probably missing some stuff. I was wondering if you guys could help me fill in the blanks (specifically with Ross Valley FD -RVY-, I'm trying to find out where their Battallion Commander is stationed). If not, here's some info for your Marin Fire scanning pleasure:

Southern Marin Fire Protection District:

Station 1: Johnson St., Sausalito

-Engine 1
-Truck 1
-Medic 31
-Inflatable Rescue Boat

Station 4:

-Engine 4
-Engine 3364
-Medic 33

Missing SoMarin stations 2, 6, 7, 9. Missing Tiburon FPD stations 10, 11, 12.

Corte Madera Fire Department:

Station 13: Paradise Dr.

-Battallion 13
-Engine 13
-Utility 13
-Medic 41

Station 14: Tamalpias Dr.

-Battallion 14
-Engine 14
-Engine 14A
-Utility 14
-Medic 412

Larkspur Fire Department:

Station 15: Magnolia Ave.

-Engine 15?

Station 16: Barry Wy.

-Engine 16?

Kentfield Fire Protection District:

Station 17: Sir Francis Drake Blvd.

-Engine 17?
-Truck 17

Ross Fire Department:

Station 18:

-Engine 18
-Medic 40

Ross Valley Fire Protection District:

Station 19: San Anselmo

-Engine 19
-Utility 19

Station 20: Butterfield Rd., San Anselmo (Sleepy Hollow)

-Engine 20
-Battalion 22 ????

Station 21: Fairfax

- Medic-Engine 21

That's all I have. Is there anyone else that listens to Marin that can help me fill in the blanks and add onto this? It'd be greatly appreciated. :)

I can help with some of it. Station 2 is closed if I am not mistaken. It is located 101 at Alexander. I have a good friend who works at station 10. I will give him a call and get the equipment list for Tiburon.

Southern Marin Station 9

-Engine 9
-Rescue 9
-BC 9
-Utility 9

Mill Valley Fire Station 6

-Engine 3286
-Type 3 wild land rig (i cant recall the 4 digit designator)

Mill Valley Fire Station 7

-Engine 3287
-Engine 3287A (reserve not in service)
-Truck 7 (need help with this 4 digit designator as well)
-BC 3212,3211,3213 (each BC has their own number)

Subject: [bayscan] Marin County District Fire Apparatus?

Hey guys,

I've been trying to put together a list of the rigs that are dispatched on Control 6 (46.50 MHz). Below is a list of what I have right now, but it's probably missing some stuff. I was wondering if you guys could help me fill in the blanks (specifically with Ross Valley FD -RVY-, I'm trying to find out where their Battallion Commander is stationed). If not, here's some info for your Marin Fire scanning pleasure:

Southern Marin Fire Protection District:

Station 1: Johnson St., Sausalito

-Engine 1
-Truck 1
-Medic 31
-Inflatable Rescue Boat

Station 4:

-Engine 4
-Engine 3364
-Medic 33

Missing SoMarin stations 2, 6, 7, 9. Missing Tiburon FPD stations 10, 11, 12.

Corte Madera Fire Department:

Station 13: Paradise Dr.

-Battallion 13
-Engine 13
-Utility 13
-Medic 41

Station 14: Tamalpias Dr.

-Battallion 14
-Engine 14
-Engine 14A
-Utility 14
-Medic 412

Larkspur Fire Department:

Station 15: Magnolia Ave.

-Engine 15?

Station 16: Barry Wy.

-Engine 16?

Kentfield Fire Protection District:

Station 17: Sir Francis Drake Blvd.

-Engine 17?
-Truck 17

Ross Fire Department:

Station 18:

-Engine 18
-Medic 40

Ross Valley Fire Protection District:

Station 19: San Anselmo

-Engine 19
-Utility 19

Station 20: Butterfield Rd., San Anselmo (Sleepy Hollow)

-Engine 20
-Battalion 22 ????

Station 21: Fairfax

- Medic-Engine 21

That's all I have. Is there anyone else that listens to Marin that can help me fill in the blanks and add onto this? It'd be greatly appreciated. :)

Subject: [bayscan] [SJPD] Morning 10851 Vehicle ?

Anyone catch a car chase this morning around 6:25 am with SJPD
chasing a Blue Dodge Ram?

I saw the Ram doing about 80MPH on north 680 and an SJPD unit
shadowing him to get his speed and then pull the dodge over. The guy
started to pull over in the center divide, to which the officer made
him go to the right shoulder. I thought nothing more of it, until I
saw the truck zoom past me to get off onto Capitol Expw with the SJPD
unit hot on his rear with lights and siren.

Topic: 36438 Message: 36442

OK. Your list is basically on the right track.

Here are some additions/corrections to add to your list:

Mill Valley Sta. 6
Engine 3286
Engine 3266 (Type 3)

Mill Valley Sta. 7
Engine 3287
Truck 3257
Engine (reserve)

So. Marin Sta. 4
Engine 4
Engine 604 (type 3)

Tiburon Sta.10
Engine 10
Medic 32

Tiburon Sta. 11
Engine 11
Engine 12 (reserve)
Engine 611 (Type 3)
Batt 5

Corte Madera Sta. 13
Engine 13
Medic 41

Corte Madera Sta. 14
Engine 14
Engine 14A (reserve)
Utility 14 (SUV)
Utility 13 (PU)
Medic 412 (reserve)
[Batt 14 is often on E-14]

Larkspur Sta. 15
Engine 15
Engine 615 (type 3)
Utility 15 (van)
Chief 15
Chief 16 (Deputy Chf)

Larkspur Sta. 16
Engine 16
Engine 16A (reserve)
Water Tender 16
Utility 16 (PU)

Kentfield Sta.17
Engine 17
Engine 17A (reserve)
Truck 17
OES (215?)
Car 17 (Batt 17)

Ross Sta.18
Engine 18
Engine 18A (reserve)
Unit 18 (utility)
Medic 40
Water Tender 18

Ross Valley Fire Protection District:

Station 19: San Anselmo
Engine 19
Engine 19A? (reserve)
Utility 19
OES (216?)
On-duty Batt Chief

Station 20: Butterfield Rd.
Engine 20

Station 21: Fairfax
Engine 21
Engine 621 (Type 3)

Stations 2, 5, 8, 12 are/have been closed
MCFD Marin City Sta. could be considered Sta.3
Add "Medic" to engine designator (i.e. Medic Engine 21) for an ALS Eng.
Note that not all apparatus at (most) stations are fully staffed. Some are cross-staffed and some are back-up rigs that can be staffed by off-duty/volunteer callback.

I'll see if I can find out more about the reserve units and current OES engine numbers.

Crash occured around 2340hours Monday night. Jeep Cherokee estimated at 80-100 mph swerved around some disabled vehicles and peds and clipped an oncoming vehicle , lost control , fishtailed and rolled over several times ejecting a grade-school aged child. All three occupants of the Jeep , 2 adults aged 26 and 27 along with another grade-school aged child died as did the child that was ejected.

CHP is still conducting the investigation at this hour (0608 hours)

I'm sure someone will come up with the real answer, but perhaps the "o"
is for owner, as in the owner picked the tow company rather than a
rotation tow.

Ben,

I know that you are not going to do much actual dispatching in the dispatcher's academy. It's more about Basic Law, crisis management, and your skills of talking to people on the phone. I talked to a friend of mine who took it in Santa Rosa and she said that it was actually kind of boring and not really what she expected.

Your might check out this website:
http://www.post.ca.gov/training/public_safety.asp

Good luck,

Nick in San Luis Obispo - 23:55 Hours

If it's the same test I took it should be easy. The only thing I got stumped on and took a guess was the math....weird numbers adding/subtracting figures and "Vodoo Numbers" other than that it was a CW Test (Cake Walk).

Although I didn't get the job Police/Fire dispatching I did get the job as EMD Dispatching.

Just rememeber to keep the caller calm or, remain calm yourself no matter what happens. It's very hard but after a while it becomes 2econd nature.Heck, I was in the 89 quake and had to stay at the desk during all those aftershocks and still take calls! Also if they give you some sort of phone simulation listen for background noises....That helps paint a picture for you as the dispatcher trying to figure out what's going on and relay the info to the field units.

Good Luck!

Do you think they will use the "bambulance" quiz??

I was talking to a former dispatcher who worked in socal. One thing she always did was when someone said "they are coming at me" she would ask from what direction. Amazingly, quite a few of the attackers were coming from the ceiling, i.e. 5150's.

The Baseclub (prior to the president nuking it and the bank account vaporizing) took a tour of the San Jose dispatch center. It was pretty interesting. I doubt boredom will be a problem.

I'll second the boring part on POST dispatcher class... of course that was many years ago.

You should also take ICS-100 and ICS-200 (basic and advanced Incident Command System), as
well as ICS-800 (new federal National Incident Response Plan) from the FEMA/National Fire site (you can take them online
and test online).

Good background if you plan on working in a center that does mutual aid requests/assignments.

36464. Marine 406MHz EPIRB

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-26 08:45:30 UTC
From: Mobile11@aol.com
Topic: 36464 Message: 36464

If anyone is interested a few months ago there was some posts about a 406 MHz EPIRB and what it was. Well, simply it's a radio device that is carried onboard a boat. When a problem happens or the boat crashes, flips over or so on the radio sends out a signal. The signal is transmitted on 406 MHz. You cannot hear it. It can only be heard on the radio (121.5Mhz). It sounds like a siren. The signal is picked up by a satellite and is relayed to Langley AFB in Virginia. That in turn is relayed to the closest RCC (Rescue Control Center). For this area one would be Coast Guard Group San Francisco on Yerba Buena Island. After that they would send the appropriate rescue response to the scene. I.E.: Helicopter,Boat,Land Mobile, Local Law Enforcement and so on.

The devise ranges in size and colors. It's small and can fit somewhere on the boat. There are different types. I have posted a picture of one in the photos section of Bayscan. It's listed under "406" The one that is posted is the one that came from the fishing vessel that sunk of Ocean Beach last May. The boat had party fishermen on it and they had to abandon ship during the sinking. The pictured 406 is a "freefloater" It comes loose from the boat and starts sending it's signal. This one did not do that. It stayed attached to the boat and about 2 days later it came loose and sent it's signal. It was found in the surf near Daly City by a jogger (it was still sending it's signal) and then turned over to the Coast Guard for their investigation.

It was found that it was attached correctly. What happened was that when the boat sank it turned over and the 406 got trapped. The underwater current moved the boat around enough that the 406 was able to float to the surface and send it's signal.

Also if you know anyone that has a 406 EPIRB on their boat be sure to let them know to UPDATE all their info to be correct and current

That was San Dunham's (scanstar) GMRS repeater.

The president quit, the task was well beyond the capabilities of the VP
who took over, and it fell a part. Unknown what happened to the money or
tax status. A few members are on this list, but I don't want to finger
them.

They have hiker versions as well. The plain 121.5 versions are under $200, but throw in 406 and GPS and the price is like a satphone (though no service cost)

That kind of scares me if we were to have something like that here.

Between say Santa Clara, San Mateo and Alameda County, do we have 50
ambulances in services at any given time?

Not that that's the major thing that worries me, but wow. 50 ambulances....

Evan

On Evan Ambulance question , I would say between AMR , Fire Dept ambulances like Palo Alto , South S.F. , the STAR cars of SJFD and the other privates , yes .....you do have that many.

In a major incident like this , lots of BLS ambulances would be enough for the minors.

Say you had a Caltrain crash , you would also have SFFD assisting should it occured in central/north San Mateo County

UPDATE . ..... LAFD Chief advising minutes ago ....9 confirmed DOAs and approximately 200 injuried including the walking wounded.

I heard one of the ICs state 59 transported BUT they have two commands set up , one on each side of the tracks.

Intial reports are that one metrolink train hit a vehicle crossing the tracks which caused it to derail and strike an opposing metrolink train AND a freight train locomotive sitting on another track.

I agree.. You do have enough resources.. But the logistics of running all these units on the right freq without chaos is almost impossible.. We have done small scale mock MCI drills and they always are a mess. I think this would be a disaster if it happened up here.. Just opinion..

It would seem EMS needs " white " channels like Fire has. May not be the best answer but at least all the fire units have at least 3 common channels. Would be a start. PD needs the same.

A crash in San Mateo County would cause less problems as ALL units within the county can communicate. LE on the Green , Fire on most any channel and EMS on the TRS system using MCI 1 or MCI 2 . But the outside agencies is where the problem is , not with fire as much as with EMS and LE.

Still not EVERY units has to communicate with the IC .

Remember that the 3 WHITE Channels are not all usable at an incident
site like this, due to adjacent channel interference (bleed over).
Law already has the common channels (CLEMARS).

The EMS Working Group of the Calif. Statewide Interoperability Executive
Committee is addressing the EMS onscene communications issue.

One of the redeeming things about BART is that it doesn't intersect roadways, preventing such antics. I think the stupid San Jose light rail had an accident with a car in its first week of operation. Caltrain whacks a pedestrian every few months. Other than the Fremont Flyer incident, BART has proven to be very safe.

Topic: 36488 Message: 36492

Hey Ed,

I had to look this up because this place closed long before my time, but it turns out I live about half a block from the property. It's under private ownership (broken down and abandoned it seems) and the stone bridge that crosses the creek is covered in no trespassing signs. From the other side of the creek it just looks like a small property so I never gave it any thought. When I saw some of the historical pictures (especially the aerial shots of just how big that place was) I was blown away. If you want to read more there's a whole website on it here: http://www.westhill.com/mtcc/today.html

I sure wish Fairfax still had something like that, pretty much now adays young people like me have to drive to San Rafael or San Francisco for anything interesting. :)

36501. POST dispatching...

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-27 03:21:27 UTC
From: David K. Z. Harris
Topic: 36501 Message: 36501

I took my class in '79, while dispatching for a Private Patrol company. (I later spent time as an ambulance driver, waiting for EMT classes to open up, but that's another story...)

When I started in the class, I was the only person NOT actively dispatching for an FD or PD.

The thing that struck me the hardest, was the instructor stating "If you haven't been on the phone with a caller, and had them assaulted while you listened...You Will! If you haven't been on the radio with officers, and heard "Shots Fired! Officer Down!"...You WILL. If you haven't had an officer, or a victim Killed while you were on the phone, and helpless to help them...prepare yourself, because it WILL happen...it's just a matter of time. It's a part of the job."

They repeated this theme at least once every day. The topics changed some (how do you stay calm when it happens? what can you do? what SHOULD you do? how do you deal with your emotions and your mind afterwards?), but they wanted everyone to realize that the chances of this happening increased with how long you did the job.

I did get a job in a local combined dispatch center, and I only lasted for less than a year. (Tip #1, do NOT dispatch in the city where you, your relatives, or your good friends live.) I didn't have anyone die on me.

I *did* provide CPR instructions to a caller...I think I went to school with her, and her father had a heart attack during the winter holidays...they had CPR cards, but in the crisis, they went blank. While rolling EMS, I asked "does anyone there know CPR?" "Yes, two of us." "OK, lets do it...is he breathing?" We determined that rescue breathing and compressions were needed, and kept that going until EMS arrived. I never did find out if he lived. BUT, after the call, my lead dispatcher then instructed me about the legalities of providing medical advice, and how, in the future, I must *never* do that again. I don't know if I would have hesitated if I didn't think I knew the caller. But it reminded me about what they said in the class. "It WILL Happen!" If it happened again, legally I'd be prohibited from even making a suggestion, and if the idea didn't occur to them, well,...all I could say would be "Help is on the way."

As for class pointers, check out;
http://www.pstc911.com/ and http://911cares.com/

I have now worked in the technology sector for over a decade, and I'm feeling much better, thanks! ;-)

In Glendale, they should sue Dr. Gene Scott, just on principle.
[1-800-338-3030]

I think the city and county know in advance that any "at grade" system
can be foiled by Joe Citizen, and they factor the lawsuits into the
cost. It is about 2.5 times cheaper to use railroad crossings than to
build something like Barts exclusive right of way.

Caltrans has taken steps to reduce the incidents. Howard and Holly streets in San Carlos and Ralston in Belmont to name just 3 where undercrossings or overcrossings were built and there are more.

As far as the peds getting hit , many of these are suicides and they are darn hard to prevent. Some of the others are those who obviously lack any common sense whatsoever when walking around RR tracks.

Its a shame, that someone trying to help another by giving CPR instructions over the phone has to worry about a lawsuit. Now don't go talking about the levels of who and who can NOT do that, I am aware of it. EMD dispatchers CAN do it

The shame is people get sued over trying to save someone's life cause the blood sucking lawyers who I slammed earlier (and will again) cost cites and counties Millions of Dollars and increase insurance prices all because they want to buy a 2nd yacht!

36507. OT:Grade Crossing Accident Prevention

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-27 05:10:39 UTC
From: jjcooke@yahoo.com
Topic: 36507 Message: 36507

While today's tragic events show that there's no absolute way to prevent at grade accidents, especially in the case of a deliberate attempt by a driver to cause an accident, there are some steps that can be taken short of complete grade separations, which are usually impossible because of cost. Have a look at http://www.hansonwilson.com/information.asp for some interesting barrier and warning systems that both help keep vehicles off the tracks and and alert trains to vehicles or obstructions on the track.

In terms of on-scene coordination, I'm hoping that some portion of the 700 mHz band gets preserved for just this type of incident. I'm not sure with the radio systems we have now that you'd ever have enough frequencies due to the bleedover problems that Don described. Maybe rebanding will improve this situation since I'm sure that any agency, no matter how well equipped and trained, is going to have comms problems at a major incident like this.

Regards, Jim

Gary: why would the *real answer* not be "officer in charge" (which
it is)? I find your post to be slightly off-base. If you (or any
others out here) want to learn some CHP terms, go to their Traffic
Incident Information page at: http://cad.chp.ca.gov/
Look in the upper right area of the page at Resources. Pull-down the
menu and click on Glossary. There you will find most of the common
CHP terms and abbreviations.

Jim -

Is 32 pairs allocated nationally at 700 MHz enough? :)

Also, the congestion at VHF is starting to relieve, as new channels
created through the rebanding process come into play.

Don

36520. NASA ARC/Moffett FAF TRS

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-28 00:56:02 UTC
From: Tim
Topic: 36520 Message: 36520

I'm having trouble tracking the NASA Ames/Moffett
Federal Air Field 400Mhz trunked system on my BC-796.

I've got the freqs entered in the same order as
they're listed on Radio Reference
<http://www.radioreference.com/modules.php?name=TRSDB&sid=348>

But it' still not trunk tracking the system, despite
being able to hear comms on the channels using
conventional mode. I assume I just don't have the
correct EDACS trunking type programmed in.

Radioreference.com lists the system as being an
EDACS Standard net.

How do I set up the ARC250 software for that? Would
I use EDACS Narrow, EDACS Wide, or EDACS SCT?

Thanks,

Tim

Topic: 36450 Message: 36521

well, caltrans may have several thousand units, but it's probably not as many as those numbered on the licsense. many licensees overlicense the number of mobile units on their system purposefully to cover future expansion and prevent any discrepancies. pull up the licenses for almost any larger company and agency, or better yet, one where you already know the number of mobile / portable units in their system. a company with 7 trucks will often be licensed for something like 15, 10 units will often be licensed for 20 or more. overestimating the number of units on a license can also help the company protect it's license during a growth spurt by preventing the limitations of the license from being exceeded and violated. not to mention, it avoids the hassle of having to have the license modified before it's expired.

Hello all

I was on my way home from the store today when I passed by the Bradley video in Antioch on Deer valley road. The Bradley video was shut down and there were crews not in chemical suites but suits of some sort that they use to clean up Hazardous materials.The Truck they were in Had Universal Environmental Emergency service written on it. This was about 4:30 PM. I just went back to the same area to get a pizza, Bradley was still shut down, and there were PG&E crews there.

Has anyone, heard anything regarding this matter?
Do you have any idea what the Problem may have been?

Thanks
Kyle In Antioch

Engine 15 just came on A3 advising shots fired / 1552 Sunnyvale
.....this is visitation valley , probably by the projects in the southern part of SF not far from the Cow Palace.

they advised SFPD was on scene . PD should be A7/ 13040 or A8- 13072

Fire on A9/ 13104 and/or A3/ 14960

so far , no one hit
2046 hours

Nina,

We use the ones at http://www.waterproofcases.net/waterproof-mobile-radio-cases-aquapac-water-proof-marine-radio-and-vhf-radio-cases.html for our marine unit and dive team. They work really well although you do have to be careful to get the seal right when you first put the radio in. It has a one way valve that allows you to transmit and the audio to be heard without much degradation. The also float and have a lanyard attached so you won't lose it if you go in the water. It would probably be a good investment for you working press people for a scanner in bad weather.

This morning I was monitoring MERA and on the Sheriff feed 45616 I hear the Sheriffs dispatcher "BEEEEEP...report of shots fired on the courts floor" being the Marin County Civic Center and right away I flashed back to the '71 civic center shootout where 4 people were killed including a judge....then I hear "BEEEEEEP, BEEEEEEEP you can 10-22....there's an open mike at the Range".....then a few minutes later.... "will all deputies at the Range please turn off their radios".

Man oh man...that had to cause some adrenalin to flow. :-)

Kyle,

I don't know for sure what was happening but, since the UEE and PG&E trucks were there, I'd guess it was a leaking transformer, either overhead or underground. Since January 1, PG&E has to certify that a leak has no PCB's before they are allowed to touch it and UEE has a mobile lab that can test for PCB's alobg with a bunch of other nasty stuff. <g>

36543. Not the kind of news you like hearing...

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-28 06:19:30 UTC
From: Evan Platt
Topic: 36543 Message: 36543

SAN FRANCISCO (Reuters) - Four Sacramento, California firefighters who admitted to having sex while on duty have been suspended pending an investigation, a spokesman for the city's fire department said on Tuesday.

The three men, including a captain, admitted to having sex with a fourth firefighter, a woman, while on duty. Superiors put all four on administrative leave on Monday, marking the second recent sex scandal to hit the sleepy state capital's fire department.

"The four individuals have admitted to having sex in the firehouse," said Captain Niko King, a spokesman for the department. "They even conspired to keep it secret by putting one person on watch so they wouldn't get caught."

The firefighters face disciplinary action ranging from time off without pay to dismissal, said King, noting officials took quick action as rumors of on-duty sex circulated through the department.

The probe follows an investigation after city firefighters attended a local porn-star costume ball last July. The department began that probe, its largest internal investigation ever, after a woman who does not work for the department said she had been sexually assaulted by a firefighter in a department fire truck.

36544. How do I find the Helo traffic?

From: David K. Z. Harris
Topic: 36544 Message: 36544

I've got the 345.0 AM, and the 123.4 AM channels in my BC250D...but I hardly ever hear anything.

What are the other channels where I might hear the helicopters? Life Flight and CalSTAR dispatches/refueling, etc.? The Coast Guard helo when it's heading to Moffet for training?

I've been culling through the old messages, looking for clues about who (on the list) seems to know, so I could ask them off-list, but I didn't turn up much there, for all of the
looking. So, I guess it's time to ask for the collective wisdom of the list. (Since we don't
have a good "helo listeners clues" page in the files section, I volunteer to put one together,
if I can get some clues. :-)

So, there is CDF 106, now back in service at (CDF Morgan Hill?) I have the CDF air-attack freqs for CDF, and Forest Service...

What birds live at Moffet? (One for SJPD, or shared SJPD/Santa Clara SO? One other?) What are their callsigns? Where do you usually hear them? (Freqs, TGID if trunked...)

Is there one, two, or three of the orange Coast Guard birds? What are their callsigns, or tail numbers, etc.? Do they normally live at the base at SFO (Out near the United Air Lines maint base, at the edge of the bay), or do they live at Moffet?

And, only slightly related...does anyone remember the TV show "Chopper One", probably in the late 70's? It only lasted a season, but I really enjoyed that season. :-)

I can only speak for CALSTAR: Calstar 1 (Concord) and 2 (Gilroy) are dispatched via landline. They'll respond on 867.5375 - Mt. Vacca for CS 1, Loma Prieta for CS 2. You won't hear much other than "You're responding to <Lat / Long> for a <type of call>. Switch to <frequency> and contact the IC."

As for other traffic, they'll come up on the local airport frequency when they're in controlled airspace, and on that 800 mhz frequency for flight following every 10 minutes.

Felton CDF Dispatch is also a good frequency - if the 800 radio isn't working or they're out of range, they'll come up on Felton CDF - 151.370.

As for refueling, you may hear them advising Felton dispatch on the 800 frequency.

I have a list of Lifeflight frequencies somewhere, but not sure what's current. :)

> What are the other channels where I might hear the helicopters?

124.3 is a VFR heads-up-man-ship channel in the bay area that lots of helos hang out on. Traffic advisories, mostly ("GOLDEN GATE TRAFFIC, Helicopter FOUR TWO LIMA, Angel Island for Pier 39, 800 ft, GOLDEN GATE TRAFFIC") but you sometimes get some good chit-chat. I've heard them down in the south bay too. Traffic helos, charters, CHP and Coast Guard usually show up there, ARGUS [Oakland PD], STARR, etc.).

> The Coast Guard helo when it's heading to Moffet for training?

I usually hear them check in with SanFranAir [345.0, like you said] when they do that, although the Coast Guard was one of the first agencies post-9/11 to get a BIG investment in crypto radio gear, so you hear them less and less (and usually when there's just a problem with their secure stuff), but then you'll hear them on 'normal' ATC ...

> Is there one, two, or three of the orange Coast Guard birds?

I think there are four that I know of: 6505, 6527, 6586, 6591 ...

Here are two of them!

LOL. It's still storming up here good with more lightning, thunder and cloudbursts. We've had .43 inches of rain in the last 15 minutes. YOu can see the red cells popping up on the NWS radar and it looks there are more offshore.

Just some general road cleanup and a barn partially down out in Jenner. I doubt it was a tornado, probably downburst winds, but the FF's sounded pretty excited about the whole thing for a while.

Regards, Jim

Aircraft have also been great to listen to tonight. All the NorCal Approach frequencies plus Oakland Center sector 41 (125.85 MHz AM), north bay. There's been a good sized thunderstorm cell parked near Sausalito causing everyone to deviate after experiencing SEVERE TURBULENCE 5000 ft and below (this is the highest definition there is). Here's an excerpt from half an hour ago:

Center: "Fedex 1827 I need you to give me a left 180 to hold 20 miles north of sausalito, [norcal's closed oakland int'l because of the weather].

FDX1827: "Okay we'll..... WHOA we're in SEVERE turbulence we'll get back to you."

(A few minutes later)

Center: "Yeah, the bay area's gone to hell in a handbasket tonight! You're holding because all four of the guys in front of you hit that severe turbulence and norcal's had to stop accepting arrivals until they can get them all on the ground."

LOL! If pilots and controllers are calling it "Hell in a handbasket"... it's BAD! Didn't compromise safety but I'm still damn glad I'm not flying tonight. :)

Looking at this mis-mash of frequencies, I just HAVE to comment on interoperability again.

Looks like fire is the only ones who can talk to each other.

Roger,

One doesn't want such things to have been real; let them be a drill, a mistake, a hoax. . I was at work at Tandy R&D in Fort Worth overlooking the Tarrant County courthouse on 1 July '92 when my scanner reported shooting inside a courtroom. It was uinclear from the radio traffic who had been shot and who had done the shooting. As I recall, police were intitially looking for a white-haired Chinese man but the actual shooter, one George Lott, had gone calmly into the Tandy Center (as a Tandy Security office told me later), where he changed his clothing in a mens' room, hiding the discarded items behind a waste basket, and walked away.

For impact, though, hearing the Orange County (CA) FD dispatcher's disbelieving voice as she reported a jet aircraft into a building was worse -- and that was rea, tool. This resulted in calling up our radio club's Reserve Police members, as the PD put into action its mass casualty protocol. Thank God it was a only a small private aircraft and the building empty where it hit.

Cortland

It really not as bad as looks. <g> Simply because you don't see other units not having the radios doesn't mean they don't exist. The coast S.O. units all have fire radios so they are able to talk to the fire units. Most of the FD chiefs also have S.O. UHF radios so they can talk direct to the deputies. State Park units all have our UHF radios and are typically dispatched by our comm center at night. The only ones who really don't much interoperability are the CHP but they also all have scanners. In a conventional, non-trunked, non-digital world like we have on the wilds of the Sonoma Coast, cross talking through scanners has taken us through some pretty hairy situations.

Don't make the mistake of applying "big city" interoperability standards to a rural area and assume they we are in some way deficient in being able to interoperate. I dare say we've handled some larger, more extensive incidents in Sonoma County with our system than many other Bay Area counties with a lot more money spent on "interoperable" systems.

Regards, Jim

I've never done the radio to radio cloning, but it seems to me you could save your settings with win96 to a file, then change the personal info on your scanner via win96 to be whatever you want this guy to have, do the clone, then reprogram (i.e. restore) your radio with win96.

Topic: 36544 Message: 36558

In a message dated 1/27/2005 22:25:00 Pacific Standard Time,
yahoomess@... writes:

Is there one, two, or three of the orange Coast Guard birds? What are their
callsigns, or
tail numbers, etc.? Do they normally live at the base at SFO (Out near the
United Air Lines
maint base, at the edge of the bay), or do they live at Moffet?

And, only slightly related...does anyone remember the TV show "Chopper One",
probably
in the late 70's? It only lasted a season, but I really enjoyed that season.
:-)

There are 4 HH-65's at Air Station San Francisco. They "Live" at the
Airport. 1 may be out of service having matinenence done to it . Another one may be
deployed on a USCG Cutter doing Law Enforcement. There are definitely 2 that
are ready at all times for SAR Missions.

Their Station Primary is 381.8 or 381.1

When they go on SAR calls they are on 157.050Mhz or 156.800 or 157.100. In
the Monterey area they are on 157.150

Their Tale numbers are 6505 , 6591 I don't know the others off hand but ,
they start with 65_ _ and 65_ _

If you hear 60_ _ then those are the HH-60 Jayhawk's. They aren't normally
around here but sometimes are "In Transit" between Air Station San Diego and
Air Station Cooz Bay in Oregon.

Hope this helps

Oh ya I remember Chopper 1. It was a Bell Jet Ranger for some city PD.
Remember 240-Robert ???

> What birds live at Moffett? (One for SJPD, or shared SJPD/Santa Clara SO? One other?) What
> are their callsigns? Where do you usually hear them? (Freqs, TGID if trunked...)

SJPD's AIR-2, SCCSO STAR-1 and one of CHP's Helos (not sure which one) share the same hangar at Moffett. Been there and there is room for about another 4 or 5 small helo's in there.

STAR-1 generally stays on Freq-1 (156.20) unless there is a call in the West Valley area (155.7 P25)

AIR-2 will float around on San Jose's freq's and even on the SO's when we call for assistance.

Not sure about CHP. I don't generally listen to them.

Hope this helps.

Mike

Sounds more like a sound card issue or sound card setup than connectivity.
Your connection speed wouldn't affect the volume of a streaming audio feed.
Granted you would have a lower bitrate, but you could have a VERY LOUD low
bitrate feed.

Mobile11@... writes:

> Their Station Primary is 381.8 or 381.1

As part of the clearing out of 380Mhz, USCG no longer has their primary
on 381.8 ... as of January 1, they've switched over to the following:

Ops Primary: 345.0
Ops Secondary: 237.9
Air-Ground Working, Primary: 326.15
Air-Ground Working, Secondary: 379.05

I've only heard traffic (other than a few radio checks just before 1/1)
on 345.0 -- it has taken over directy for call "San Fran Air" that was
on 381.8.

For you HF listeners, they changed the calling frequencies too:

Old (kHz)	New (kHz)
4134 ship /4426 shore	4125 Simplex
6200/6501	6215 Simplex
8240/8767	8291 Simplex
12242/13089	12290 Simplex

We're getting way off topic here, but to be precise, it depends on both the sending and receiving client. If the sending client doesn't wrap, it still has to be non-wrapped by the receiving client.

The surefire way is to send a HTML encoded message with a HTML link of The Click "HERE" type, but I for one have HTML disabled, so wouldn't make things any easier for me. :)

thanks Paul , I knew it wasn't me because the Tac channel WAS just fine a few days ago. In addition , I was monitoring LA County Fire and Glendale during the metrolink crash incident the other day and both speakers audio was just fine. Same with other firefeeds.com such as FDNY, Chicago FD , Philadelphia FD to name a few I have listened to recently.

36572. Statewide BOL on 154.710

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-28 22:59:32 UTC
From: bayscan@comcast.net
Topic: 36572 Message: 36572

I posted it a little while back but it seems that 154.710 is a good
frequency to have punched in the scanner if you want to hear any major
BOL's that originate out of Contra Costa County.

I just heard this come across on that frequency.
It seems they are patching into the radio system via some other system
as you can even hear the tones as they shut it off.

The audio is on my site as the first link at:

http://www.bayscan.net

36575. PL for Santa Clara Fire??

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-29 02:36:20 UTC
From: Evan Platt
Topic: 36575 Message: 36575

For Santa Clara fire, 153.965, I have it as 131.8, but it's coming in on a different PL - with PL on, I don't receive anything. With PL off, I do.

Thanks. :)

I did a tone scan with my Icom2100 and it did not detect any tone so you
have to scan no-tone (yeah, I hate that too because of interference).

36580. OT: Thoughts on Amber Alerts

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-29 06:14:31 UTC
From: jjcooke@yahoo.com
Topic: 36580 Message: 36580

I'm interested in your thoughts about how the Amber Alert system is being used. I was on the task force that helped put the Bay Area Amber Alert System together and this is our purpose statement:

"The AMBER Plan is a voluntary, cooperative partnership between law-enforcement agencies and broadcasters to send an emergency alert to the public when a child has been abducted and it is believed that the child's life is in grave danger."

While I don't know all the details of todays's Amber Alert, please indulge me in some speculation. It sounded like a typical parental taking without permission. It's not clear if it even qualified as an abduction. The only apparent danger was that father "may not have understood how to take of the child's needs".

The Amber Alert System was supposed to be activated for a true child abduction and, even then, only when there was a clear and present danger to the child's safety. It was never meant to be an aid in recovering custody in domestic dispute situations.

It seems like these Amber Alerts are occuring more and more frequently and they don't apparently meet the criteria that was originally set for an Amber Alert. My fear is that the public is going to get so jaded to these things that they won't notice when there is an abduction where locating the child is a true emergency.

What say you on this?

Regards, Jim

My two cents. I wish the signs said "amber alert tune to KGO KCBS ..."
To expect someone to read much beyond that on those overhead signs puts
way too much faith in the skills of the average driver. If there are
complaints about plugging commercial radio stations, maybe there should
be a universal TIS frequency for such announcements.

Those fears were expressed sometime ago. The point is valid, you can't use it everyday but you really don't want to hesitate too much either. it worked in this case because the father heard it over the radio and turned himself in. Not the usual way it will work, but it achieved the same result

The suspect is the only one down in this officer involved shooting. Apparently not in too bad a shape since they are transporting to Santa Rosa Memorial by ambulance. No officers injured and everything code 4.

Just an aside, Rohnert Park called a Code 20, which means roll everything in the county. Petaluma PD was sending four units code three and you could hear the disappointment in their voices when they got the code 4 and had to shut down thier race up the freeway. <g>

That was still an ok post Nina. we had just a fire in East
Palo Alto several years ago. Vehicle fire extended into structure. It was even
a small house . I had NO scanner that morning and saw the fire from the
University overpass. I was " guessing " as to if it was a car fire or structure and
it was kind of in between. a couple cars and carport burning but extended
into the house. The fire was being knocked down and I was surprized to hear the
Chief (I was standing next to his buggy) call a 2nd alarm.....but then
he also called a Countywide EMS Red Alert.....he had One ambulance on-scene
and wanted FOUR more.

the house had only ONE decent entrance and it was on fire , the
garage had been converted into a bedroom and 2 cars , bumper to bumper were up
agaist the garage door. ALL the window had grating , but illegal grating with
no emergency push-bars inside. 13 members of one family were
inside.....and 9 of them died.....it was horrible

so , what "seems " to be a minor incident can blow up into sometime major.

I don't have a problem with putting this information over the public airways. He may have turned himself as result of simply hearing a news story regardless if it was an Amber Alert. The problem I have is using the freeway signs. As other posters have said, it's not realistic to read four lines of detail on those signs and concentrate on driving. The freeways signs were only supposed to used when the suspect was assumed to be in the immediate area or the abductee was in clear and present danger to life and limb. In a stranger abduction, there's no doubt that time is critical. It's not clear to me at all that a biological child taken by a parent falls into this category unless there are other, more extreme circumstances.

There were 4 Amber Alets issued in the Bay Area in 2002, 14 in 2003, and 22 in 2004. I don't know how many so far this month but it has been more than few. If we get to the point where there's Amber Alerts being issued weekly, I'm afraid we are going to end up diluting the reason the system was started.

Regards, Jim

22 in a year isn't that bad, a little under 2 @ month. While true reading for lines is can be a little tough, consider the other things drivers do, reading billboards, talking on cellphones, some are worse. The point about limited the Alerts is good. This call was borderline, the 10pm news mentioned that fact. no restraining order on the father, this could and may even end up being a miscommunications bet dad and mom. You do have to be careful. They do have strict guidelines to keep from overloading the public with the calls, as you say, the public will begin to ignore them. We don't want them to become invisible like car alarms.

I just so happened to be on 101 southbound in Rohnert Park with my scanner tonight. I missed the initial call but the Rohnert Park units were code 3 to the Roger Wilco Market and some incident involving that area. Suspect was gone but they then all sped to the americana apartments.

I heard the Petaluma units giving each other directions to the apartments, and then next thing I knew each one of those four Petaluma units passed by opposite me all code 3.

What happened? I missed the initial call but caught he was a 273 suspect listening to the Sonoma County Sheriffs afterwards. Child Neglect/Felony Wife Beating? Am I missing something? Did anyone catch this from the beginning and know what happened?

Well, its exactly what they said , it what the call-taker typed into the event. It also may have been done to get the response that it did.

in another funny (well, semi-funny) call ......Just now , SFFD Engine 3 apparently had an " assist a Citizen" call which can be almost anything.

Engine 3 came on the radio , in a disgusted voice , that " the lady just wanted help with her groceries, NO Merit.....Engine 3 In-Service" .

Inigo,

I caught it just as it was happening. Domestic dispute at Roger Wilco and the supect fled to the American Apartments in his vehicle. They had him stopped and it sounded routine until an officer got on the radio yelling "Shots fired, suspect down, Code 20, Code20!" I never heard what type of weapon the suspect had or why the officer shot him. Everybody and their brother in the county was rolling to the call but RP called it Code 4 in about 10 minutes and cancelled the Code 20.

Should have the detailsin this morning's Press-Democrat.

Regards, Jim

36602. Update: Rohnert Park Shooting

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-29 14:06:57 UTC
From: jjcooke@yahoo.com
Topic: 36602 Message: 36602

It's already on the P-D website at
<http://www1.pressdemocrat.com/apps/pbcs.dll/article?
AID=/20050129/NEWS/501290303/1033/NEWS01> . Looks more serious than I
thought. Suspect is dead, apparently had a handgun and turned and
pointed the weapon at the officers after he had already been tasered.
Already have one witness saying the officers are liars and the
suspect never turned, was running the entire time. I guess they shot
him just for the heck of it. I'm sure this witness had a much clearer
view and understanding of the situation than the officers involved.

Regards, Jim

The signal is sent by 406Mhz. You cannot hear it because it is a data burst of info such as Name,Address,Emergency Phone number, and so on. There is a signal meant for Direction Finding (DF) on 121.5 Mhz. You cannot hear that either by ear. You can only "hear" it on another radio. Such as DF equipment,Scanner or anything that can recieve that frequency. That is what SAR Teams use to DF or home in on to find it.

E13, E14, E15, T17, Medic 40 (cancelled), E16 requested by 14, Medic 41.

Control 6 - 46.50 <- Initial dispatch
Control 13 - 46.12 <- Mutual Aid / On scene coordination.
Tactical Blue - 46.08

And this happened really quick but it's sounding like everyone can cancel now except E14 and M41. Check out the file I uploaded: MarinDistrictFireCallsigns.xls for engine assignments.

You can only modify, from the keypad, the bottom line. The three
upper lines must be done with WIN96. It's FUNC something. It's in the
manual.

Just copy the configuration to another folder and modify it with
WIN96, then clone.

36612. Re: [bayscan] Marine 406MHz EPIRB

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-01-29 23:34:06 UTC
From: john Beatty
Topic: 36464 Message: 36612

Here is the scoop in a little more detail:

Types of EPIRBs

Emergency position indicating radiobeacons (EPIRBs), devices which cost from $200 to about $1500, are designed to save your life if you get into trouble by alerting rescue authorities and indicating your location. EPIRB types are described below:
Class A
121.5/243 MHZ. Float-free, automatically-activating, detectable by aircraft and satellite. Coverage is limited. An alert from this device to a rescue coordination center may be delayed 4 - 6 or more hours. No longer recommended.
Class B
121.5/243 MHZ. Manually activated version of Class A. No longer recommended.
Class C
VHF ch15/16. Manually activated, operates on maritime channels only. Not detectable by satellite. These devices have been phased out by the FCC and are no longer recognized.
Class S
121.5/243 MHZ. Similar to Class B, except it floats, or is an integral part of a survival craft. No longer recommended.
Category I
406/121.5 MHZ. Float-free, automatically activated EPIRB. Detectable by satellite anywhere in the world. Recognized by GMDSS.
Category II
406/121.5 MHZ. Similar to Category I, except is manually activated. Some models are also water activated.
Inmarsat E
1646 MHZ. Float-free, automatically activated EPIRB. Detectable by Inmarsat geostationary satellite. Recognized by GMDSS. Currently not sold in the U.S.; however, the Federal Communications Commission is considering recognizing these devices.
121.5/243 MHz EPIRBs

These are the most common and least expensive type of EPIRB, designed to be detected by overflying commercial or military aircraft. Satellites were designed to detect these EPIRBs, but are limited for the following reasons:

Satellite detection range is limited for these EPIRBs (satellites must be within line of sight of both the EPIRB and a ground terminal for detection to occur),
Frequency congestion in the band used by these devices cause a high satellite false alert rate (99.8%); consequently, confirmation is required before search and rescue forces can be deployed,
EPIRBs manufactured before October 1989 may have design or construction problems (e.g. some models will leak and cease operating when immersed in water), or may not be detectable by satellite. Such EPIRBs may no longer be sold,
Because of location ambiguities and frequency congestion in this band, two or more satellite passes are necessary to determine if the signal is from an EPIRB and to determine the location of the EPIRB, delaying rescue by an average of 4 to 6 hours. In some cases, a

rescue can be delayed as long as 12 hours.
COSPAS-SARSAT is expected to cease detecting alerts on 121.5 MHz, perhaps by 2008.

One November 3, 2000, the National Oceanic and Atmospheric Administration (NOAA) announced that satellite processing 121.5/243 MHz emergency beacons will be terminated on February 1, 2009. Class A and B EPIRBs must be phased out by that date. The U.S. Coast Guard no longer recommends these EPIRBs be purchased. See the U.S. Coast Guard Media Advisory on this subject.

Class C EPIRBs

These are manually activated devices intended for pleasure craft which do not venture far offshore and for vessels on the Great Lakes. They transmit a short burst on VHF-FM channel 16 (156.8 MHz) and a longer homing signal on channel 15 (156.75 MHz). Their usefulness depended upon a coast station or another vessel guarding channel 16 and recognizing the brief, recurring tone as an EPIRB. Class C EPIRBs were not recognized outside of the United States, and were no longer recognized in the U.S. after 1999.

406 MHz EPIRBs

The 406 MHz EPIRB was designed to operate with satellites. The signal frequency (406 MHz) has been designated internationally for use only for distress. Other communications and interference, such as on 121.5 MHz, is not allowed on this frequency. Its signal allows a satellite local user terminal to accurately locate the EPIRB (much more accurately -- 2 to 5 km vice 25 km -- than 121.5/243 MHz devices), and identify the vessel (the signal is encoded with the vessel's identity) anywhere in the world (there is no range limitation). These devices are detectable not only by COSPAS-SARSAT satellites which are polar orbiting, but also by geostationary GOES weather satellites. EPIRBs detected by the GEOSTAR system, consisting of GOES and other geostationary satellites, send rescue authorities an instant alert, but without location information unless the EPIRB is equipped with an integral GPS receiver. EPIRBs detected by COSPAS-SARSAT (e.g. TIROS N) satellites provide rescue authorities
location of distress, but location and sometimes alerting may be delayed as much as an hour or two. These EPIRBs also include a 121.5 MHz homing signal, allowing aircraft and rescue craft to quickly find the vessel in distress. These are the only type of EPIRB which must be certified by Coast Guard approved independent laboratories before they can be sold in the United States.

A new type of 406 MHz EPIRB, having an integral GPS navigation receiver, became available in 1998. This EPIRB will send accurate location as well as identification information to rescue authorities immediately upon activation through both geostationary (GEOSAR) and polar orbiting satellites. These types of EPIRB are the best you can buy.

406 MHz emergency locating transmitters (ELTs) for aircraft are currently available. 406 MHz personnel locating beacons (PLBs) are available in Alaska and Canada, and will soon be available throughout the U.S.

The Coast Guard recommends you purchase a 406 MHz EPIRB, preferably one with an integral GPS navigation receiver. A Cat I EPIRB should be purchased if it can be installed properly.

406 MHz GEOSAR System

The major advantage of the 406 MHz low earth orbit system is the provision of global Earth coverage using a limited number of polar-orbiting satellite. Coverage is not continuous,

however, and it may take up to a couple of hours for an EPIRB alert to be received. To overcome this limitation, COSPAS-SARSAT has 406 MHz EPIRB repeaters aboard three geostationary satellites, plus one spare: GOES-W, at 135 deg W; GOES-E, at 75 deg W; INSAT-2A, at 74 deg E; and INSAT-2B (in-orbit spare), at 93.5 deg E. Ground stations capable of receiving 406 MHz. Except for areas between the United Kingdom and Norway, south of the east coast of Australia, and the area surrounding the Sea of Okhotsk near Russia, as well as polar areas, GEOSAR provides continuous global coverage of distress alerts from 406 MHz EPIRBs.

Note that GEOSAR cannot detect 121.5 MHz alerts, nor can it route unregistered 406 MHz alerts to a rescue authority. GEOSAR cannot calculate the location of any alert it receives, unless the beacon has an integral GPS receiver.

The COSPAS-SARSAT System
COSPAS-SARSAT is an international satellite-based search and rescue system established by the U.S., Russia, Canada and France to locate emergency radio beacons transmitting on the frequencies 121.5, 243 and 406 MHZ.
COSPAS
Space System for Search of Distress Vessels (a Russian acronym)
SARSAT
Search and Rescue Satellite-Aided Tracking
Inmarsat E EPIRB

Inmarsat E EPIRBs transmit a distress signal to Inmarsat geostationary satellites which includes a registered identity similar to that of the 406 MHz EPIRB and a location derived from a GPS navigational satellite receiver inside the EPIRB. Inmarsat EPIRBs may be detected anywhere in the world between 70 degrees North latitude and 70 degrees South latitude. Since geostationary satellites are used, alerts are transmitted nearly instantly to a rescue coordination center associated with the Inmarsat coast earth station receiving the alert. Alerts received over the Inmarsat Atlantic Ocean Regions are routed to the Coast Guard Atlantic Area command center in New York, and alerts received over the Inmarsat Pacific Ocean Region are routed to the Coast Guard Pacific Area command center in San Francisco.

A friend stated that around 1500 plus Sunnyvale Public Saftey has
closed off / barricaded Sunnyvale Ave.& Washington Ave for someting
going on in the Apt.Complex in the SE section from the intersection.
Lots of SPS cars in area.
He could not catch any traffic.
Anyone know about this?

BTW , did they happen to mention to you how long they are leaving
it free ?

That was up to me, but I got a notice from them yesterday asking me to change it within two weeks, and I can change it as I see fit (like large fires and so on.) but they want the money (and so do I) so TWO WEEKS is the anwser you are looking for.

How annoying.... Also, I've noticed there's about a 10 second transmit hang after dispatch unkeys - carrier only, no modulation. Is that because of the bridge?

And I assume it's a one way (800 - VHF) only bridge, not VHF - 800?

Santa Clara PD supervisor requesting that dispatch notify Sunnyvale that they may need to help out on priority calls for the duration of this incident.

UPDATE - UNITS ON SCENE

500
PD unit on scene has made phone contact with victim - requesting the victim come out front door, but unable to walk and will try to crawl as far as he can. Suspect last seen going into bedroom - unknown if shot with handgun or rifle at this time.

PD will breech window as victim has crawled into living room - PD to supply cover fire for victim in case suspect attempts to press attack (holding this information until appropriate time just to be safe). Victim has been extricated from home.

Yup, that carrier is insanely annoying - not sure why it's so long. And it
is a one-way bridge.

Negative. All Santa Clara municipal departments are on trunked system except for the SCFD bridge to VHF 153.965. And since San Jose Fire Dispatch is 155.025 (output), it's reasonable to assume that you have some pretty old data there.

Cheers!

Surrounding homes are being evacuated at this time.

Suspect called ex-girlfriend and talked to her mother expressing that he had put away the gun and is now ready to come out. According to the ex the subject has a pattern of violence followed by passive behavior (bi-polar).

Craig , that list is REAL good , its been updated since the last time I saw it with the specialities of the USARs. But, there are a few corrections

Station 2 now had Rescue-Medic 2 (STAR Car) and NO light unit
Station 29 NO longer has a Rescue-Medic (STAR Car) but now has a light unit (as you can guess, these above stations switched) the reason was the closing of San Jose hospital closing ((and the loss of the trauma center)) . Instead of tying up an east side Engine which may send their paramedic with AMR to VMC and then having to drive all the way over their to pick him/her up. Then send a STAR car and use THEIR paramedic and send the STAR Car to VMC to pick him/her up therefore not tying up an Engine Co. that long

The Airport (Station 20) has a new rig Engine 20D

those are the only changes I know of.

Hi guys,

From a Mercury News article:

"Regional wants to add up to 108 beds to the 204 it now operates. Also on the drawing board: new operating rooms for advanced cardiac surgery and neurosurgery, cancer care services, a high-level neonatal intensive care unit, a bigger emergency room with a ROOFTOP HELIPAD, a new trauma center, private rooms in the labor and delivery unit, an expanded nursery and a medical office building housing up to 60 doctors and an outpatient surgery center."

Sounds like nothing in place, yet.

From: inigo4688
Topic: 36639 Message: 36639

Hey guys, I'm running out of Marin county fire departments to ask about, but I also made up a list doing a little research about their stations. Since we're in the fire apparatus mood tonight, can anyone help me correct it and fill in the blanks?

Thank you very much in advance, and I'll upload it to bayscan files like I did the last one once I know it's correct.

-Inigo

San Rafael Fire Department:

Station 51: 1039 C Street (HQ)

-Engine 51
-Medic 51

Station 52: 210 3rd St.

-Engine 52

Station 54: 46 Castro St.

-Engine 54
-EOC Trailer (according to their website)

Station 55: 955 Pt San Pedro Rd.

-Engine 55
-Truck 55
-USAR (#?)

Station 56: 650 Del Ganado Rd.

-Engine 56
-Rescue 56

Station 57: 3530 Civic Ctr. Dr.

-Engine 57
-Truck 57

P.S. - Obviously there's more (Bat. Chiefs, Utilities, etc.), can anyone help? Also does anyone have info on Novato? Then I'm out of questions. :) San Rafael's website is http://www.srfd.org .

I saw T57 today at Northgate Mall, and I think I've heard 55
dispatched on the scanner before, but I know it's pretty new. As far
as whether their both staffed at once, I'm not sure. Maybe the person
who knows can also help me confirm the unit assignments. :)

FYI: San Rafael Fire cross-staffs the aerial truck apparatus and engine at the two *truck stations*. There are three personnel at the station, and quite often when a truck response is called, two take the engine and one takes the truck for a tandem response. I also believe that on some responses, all three go on the truck.

As for Truck 55: I heard it has been moved to Station 4 (=Truck 54), but I'm not 100% certain.

As I remember, the reserve apparatus is: Station 1 - E-512, M-512, Station 6 - Medic 562. There used to be another reserve engine at 3 (E-532), but I'm not sure now.
Utility 52 (hazmat) is at Station 2, and the Hose Tender (HT) was probably moved to Station 5 when the Truck was moved from 5 to 4.

Thanks Erik, I couldn't figure out at first if it was the Radio Shop or what because they were talking about Motorola portables that were going to become "front line" etc. Please fill us in on how the SCADA-based FIRESCAD station alerting system works as you learn more. I'm curious as to how it interacts with MERA....

OT: here's a good link about Hamilton Air Force Base and it's history. :-)

Nina,

I've never heard of FIRESCAD although I assume it's a computer aided dispatch system of some type. SCADA I know about since I did quite a bit of work with SCADA systems over the years. It stands for Supervisory Control And Data Acquisition. It's most often used in industrial applications and particularly in the utility industry. It consists of remote sensors that tell if something like a dam gate is up or down and plots a history of the device movements or mechanical use. The information is transmitted back to a central computer, either by landline or a radio telemetry system.

I've never heard of SCADA being used for things like fire trucks but it's actually an intriguing possibility with the radio technology that's available today. With the right sensors, you could tell when a hose was hooked to a hydrant, when water started to flow, and how much total water was deliverd. SCADA could also monitor all the mechanical systems on an engine and track their hours of use. With this information, it would be much easier and more cost effective to schedule maintenance and replacement of systems.

I have no idea if this is what SCADA means in this case but I'm interested in hearing about it also.

Regards, Jim

I suspect "FIRESCAD" is the Motorola trade name for their new alerting system (like "Motran" and "Micor" were names for series of radios).

With the FCC mandating narrowband, the methods of personnel alerting will be changing to meet the new playing field.

Report of an Asian female bleeding from the nose and arm sitting in a car about three miles toward Mt. Madonna on Hecker Pass Road near Pole Line Road. RP said he is unable to rouse the subject and she has been there for at least an hour. I didn't catch the disposition of the victim, but didn't sound positive.

Incident is working on 156.210

Sheriff Units

7G10
71G6
71G1
71G4

BOL to be passed to Santa Cruz County Sheriff to stop any pedestrian walking down Hecker Pass Highway (152) and that the suspect is possibly armed.

7B10 will be bringing a SAT-PHONE from the station to the scene.

Anyone have any additional on this one?

36668. OT: Animal Cops on San Francisco

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-02-01 03:34:23 UTC
From: Just Joe
Topic: 36668 Message: 36668

Hi

Animal Cops, the show on Animal Planet that follows various Animal Control officers from around the country features SF Animal Control at least for this week.

Animal Cops is on daily, 7pm and 10pm on The Dish Network, I don't know if cable has a different airtime or not. Kind of an interesting look at Animal Control and the SFPD.

So far on the first night they have been to Visitacion Valley, the projects adjacent to St Mary's along 280.

FYI
Joe

36669. Anyone looking for a whalen Cadet Responder light?

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-02-01 03:57:15 UTC
From: Evan Platt
Topic: 36669 Message: 36669

I have a Whalen Cadet responder light - dual speed with a mirror. Smallish rotatting light, dual speed, with a mirror (detachable) to double the flash rate. 2 pieces of the mirror are broken (it's not all one piece - it's like 6 mirrored pieces on each side - so you could get replacements). And it takes lenses, so you have 2 piece lenses, and then if you use the mirror, you can have the front red, the back blue, and then as it hits the mirror it's the second color.

Anyone interested? Anything interesting to trade, let me know.

ESP

No problem.

In this case, the comm center with fire dispatch responsibility is signaling individual fire stations to advise them of calls. (You may remember the TV show "EMERGENCY!" and the series of alerting tones that prefaced each dispatch sending our heroes off on another adventure.) In other locations, the technology is used to trigger public warning sirens in Contra Costa County, or along the tsunami run-up zones on the Hawaiian islands.

- - -

In order to provide more spectrum for public safety agencies (and others), the FCC has decided that the amount of spectrum that land mobile signals occupy will be reduced in half (and there is a proposal for half that again when the technology will support it), and the space between channels will be halved. Visualize today's signals as a 2" pipe carrying water. Tomorrow's "narrowband" signals would be a 1.25" pipe (and in the future, a .625" pipe). We can decode the 1.25" pipe's signal in our current receiver designs. If we go digital, we can do more with the 1.25" pipe's signal.

When is all of this happening? Some has started now - all new systems are supposed to be narrowband. Existing systems have until 1/1/2013 to convert.

Don

FIRESCAD is a SCADA-based fire station alerting system that Motorola has developed from their main SCADA-based system, MOSCAD <http://www.motorola.com/cgiss/moscad.shtml>

The basic function is to *ringdown* fire stations and activate alarms and voice speakers. This allows the personnel at the station to be alerted of a response dispatch. Other ancillary functions that can be performed by FIRESCAD are the turning on of lights in the sleeping quarters, the shutting off of cooking devices, and the acknowledgement of receiving a dispatch.

As for the NTIA/FCC narrowband specs, the MERA system does meet the narrowband (12.5 KHz channel spacing) specs, but the use of FIRESCAD is not necessarily required on narrowband frequencies. It's more of something that Motorola sold the the County of Marin, like the digital modulation capability.

36672. San Mateo freqs

From: caladded@aol.com
Topic: 36672 Message: 36672

For the live of me I don't know why people post information like
Foster City being on the TRS which was, as pointed out, totally false

488.6125 Which I believe WAS Newark Fire, IS in fact their new
frequency, thanks for the correction?

Those monitoring San Mateo County also may want to enter 483.0375 as the
new Belmont Police frequency.....however, its only in Kelty and I have NOT
yet heard them on it, they still are on 488.4875 with San Carlos. The new
FREQ is also listed as a P25, Soooooo you need your digital scanner for this one.

Ed: Relax... Reread the message:

"i think they went on the new digital system in san mateo county but not sure what the new talkgroup is? any info would be greatly appreciated!"

This was not an 'authoratative' statement but a question. The OP was simply asking a question.

Oh, ok , your right Evan ....but..... a lot of BAD information DOES get posted ....why did he " think" they went to the TRS however ?

I want to mention again , that Belmont PD freq is UNCONFIRMED ..... but I put it in postion 24 anyway , once they start using it (if thats right) I'll post it.

Thinking out loud here ....When I first heard about the SM TRS ONLY county was supposed to be on it. No one even mentioned the paramedics who have plenty of TGs now. then Redwood City joined. I am " wondering" about the agencies who just may have more money like Atherton or Hillsborough....., Since Atherton borders RWC it would make sense. Hate to say this , I wish more and more of the PDs would go to it. RWC is clear as a bell as is the whole system and that is with a Uniden.

Thanks for the tip about EPA.....years ago , some of my co-workers used to keep a few newpapers rolled up real tight and use numbers rubber bands to make a short of club , because the packs of dogs in EPA would chase them down the streets in their trucks. Some were so agressive they would actually bite their tires (now THATS some MEAN dogs) I haven't seen the packs of dogs in sometime ,although I do hear the " bad" dog calls on EPAPD from time to time.

Animal Cops in SF is all week on Comcast channel 51 @ 10PM

Ok let me help since i was there =)
Units on scene were

AMR 710,422,510

Sunnyvale BC, Med 8, Med 7, Truck 1, Engine 3, Squad 3, Squad 6, 3 Patrol units

Mountain View 2 Engines, Rescue, BC

5 CHP

Total of 3 patients.. 1 in the rollover SUV was AMA (dont ask me how he didnt die)
Other 2 patients were in a small compact car.. Both wernt to Stanford Code-3 with chest trauma.. Both will survive =)...

The call came across as two accidents one with a truck on fire and people trapped. This was not so .. Both cars werein the same accident.. It was just a large scene so the 9-1-1 callers thought it was two accidents.. Thats why so much equipment was dispatched.

Damn it guys.. i didnt bring my digi cam with me to work.. sorry no pics..

From: Craig Rose
Topic: 36691 Message: 36691

Just a quick update on this incident from yesterday's posting (see below).

This turned out to be a murder (187) victim, in her car, that was found by a truck driver.

Heard this on KGO radio this morning.

-C-

Report of an Asian female bleeding from the nose and arm sitting in a car about three miles toward Mt. Madonna on Hecker Pass Road near Pole Line Road. RP said he is unable to rouse the subject and she has been there for at least an hour. I didn't catch the disposition of the victim, but didn't sound positive.

Incident is working on 156.210

Sheriff Units

7G10
71G6
71G1
71G4

BOL to be passed to Santa Cruz County Sheriff to stop any pedestrian walking down Hecker Pass Highway (152) and that the suspect is possibly armed.

7B10 will be bringing a SAT-PHONE from the station to the scene.

Anyone have any additional on this one?

36693. Work finally starts on disputed emergency antenn

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-02-01 19:51:42 UTC
From: Robert W. Sanford
Topic: 36693 Message: 36693

If I have some time this week when Im off Ill take a drive by the Tiburon location and shoot some pictures.

Work finally starts on disputed emergency antenna
By Carla Bova
IJ reporter

Tuesday, February 01, 2005 - After years of delays and litigation, construction began yesterday on the Southern Marin emergency radio antenna at Mt. Tiburon - second-to-last of the 14 broadcast and receiving sites in Marin's $21.5 million emergency radio system.

The 60-foot tower that will be topped by a 13-foot antenna is expected to be operational toward the end of March.

"It is somewhat anti-climactic," Tiburon resident Barry Lemieux said. "Once the decision was made, we expected it and now it is occurring. We have known for months that it would."

Controversy over the Tiburon antenna site contributed to more than three years of delays.

The emergency system has been in planning since 1998 and was expected to have been finished by December 2001. A West Marin antenna site in Bolinas is the final one needed. Officials are negotiating a location.

Neighbors and the town sued to block construction of the Tiburon antenna, in a residential neighborhood at 99-12 Mt. Tiburon Road, because they felt it was too close to private homes. The legal challenges ended in August 2004, when the California Supreme Court declined to hear an appeal by the neighbors and the town.

The board of the Marin Emergency Radio Authority, or MERA, voted Sept. 30, 2004 to build the tower at Mt. Tiburon, and construction began yesterday after yet a few more days of delays because of heavy rain.

MERA Executive Director Marty Nichols said a crew from Tower Structures of Minden, Nev., began work on the Mt. Tiburon site retaining wall and tower foundation. Tower Structures is a subcontractor for Motorola Corp., the suppliers of Marin's radio system.

In September, the MERA board also gave its blessing for tests of a replacement site on Wolfback Ridge above Sausalito.

If the Wolfback Ridge site proves adequate by itself, the agency would remove the Mt. Tiburon antenna and relocate operations to the Sausalito spot.

Nichols said MERA agreed with the town and neighbors to test various configurations of antennas at Wolfback Ridge to ensure it can operate on its own.

"The criteria for having Wolfback be feasible as a replacement site to Mt. Tiburon is that Motorola be willing to certify to MERA that the site could operate as a single site, providing the same coverage as would have been provided at the Tiburon site and that it could receive a federal broadcast license," Nichols said.

Neighbors hired InCode of San Diego to work with a Motorola engineer on the Wolfback Ridge study and the town of Tiburon is paying up to $25,000 for it. Lemieux said neighbors will pick up the balance if it should cost more than that. The results of the study are not in yet.

"We looked at whole slew of antenna configurations and are hopeful we found one that works. But the report is being completed and then we need to review the results," Lemieux said.

If the study determines the Wolfback Ridge site satisfies MERA's requirements, the next step would be to determine the cost to relocate the tower and to secure financing.

The board had approved a general cost-sharing plan in which MERA would pay one-third the cost of the Wolfback Ridge antenna, while Tiburon would pay two-thirds, with Tiburon neighbors contributing to Tiburon's share.

After that, a lease would need to be negotiated, the proper permits obtained and the necessary environmental reviews and government approvals acquired, Nichols said.

Most of them are on the various LTR and 900 trunking systems. Not much voice traffic these days. Most are dispatched via data terminal.

Bayard brought it up !! his number for East Palo Alto was WRONG , I have NO clue where he got 17 .....try again.

but being we are on the subject , it always bothered me why these communties are so up in arms over Cary Verse being placed in their neighborhood where they ALL have other people with similiar offenses .

take San Jose , people were carrying signs and carrying on on Monterey road(which is a garbage neighborhood anyway) and yet the Megans' law website shows 1,502 with similiar crimes in that town
ONE THOUSAND FIVE HUNDRED and TWO . yet Cary Verse is the only one getting the attention.....its the MEDIA who caused all of it.

lets get back to scanning , bayyard should NEVER have made the comment .

For the record. East Palo Alto shows 55 NOT 17
Redwood City has 140 Fremont 124 and thats all I am listing.

First of all lets change the subject line which i always hear being spoken. Am I getting my people wrong, but wasn't Verse the first person to "graduate" from the so called recovery program at atascadero? or is that someone else? If so then he isn't the same as everyone else. Second I sure the hell would want to know if a high risk offender was coming into my neighborhood. And its a shame all 1502 of them aren't having the light shined in them by the media. So what if the media is doing it? Its our right to know.... All males who have done these crimes should have their manhood surgically removed and put on drugs. Then you can put them back in the community. But to say the media shouldn't be focusing on these people and crying poor Cary Verse and all the others is ridiculous.

36716. N/B HWY 101 San Francisco Name Changes

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-02-02 02:21:14 UTC
From: Mobile11@aol.com
Topic: 36716 Message: 36716

Noticed a few changes tonight on the way home. These changes are just for NorthBound 101 traffic.

"3 Com Park" is no longer on the freeway sign. Now it's the "Monster Park" off ramp. Saw the crew changing the sign tonight. Not sure when they will cahnage the SouthBound signs.

Probably gonna hear a few funny calls on this one.

The 3rd street off is now the "Paul Street " off. The reason is the MUNII LRV (Light Rail Vehicles) needed a bridge for their new StreetCar line and it closed the off ramp and now you have to get off on Paul Street.

Just a few changes out there on the highways!

No, it doesn't, nor does it have anything to do with scanning - like this entire thread.

>.........rape is NOT a sexual crime

I believe if you ask a woman that, she'll disagree. Plus, I believe it's classified as a sexual crime. But then again, we're getting way off topic here. I think we should drop this thread.

36718. Any reviews of the Uniden BC246T - What do you think?

It doesn't cost all that much money to put a few users on digital, especially those you don't want to be monitored. However, EDACS users would probably go Pro-Voice since the digital EDACS radio models I've seen come equipped with both Provoice and P25. [I've only looked at macom models.] Anyway, you wouldn't go P25 if you have Pro-voice since P25 can be monitored and Pro-Voice can't, at least not with a scanner.

BTW, I saw the 396T in Vegas. It sounds like a winner.

The discussion about animal control frequencies came up after the initial discussion about the show Animal Cops. I don't think anyone said they want to scan "animal people", but maybe some people like listening to that. I don't listen to ambulances, but that doesn't mean I think it's funny that people do, anymore then people who monitor their local Target or McDonalds. It's all about scanning. If you've never listened to the animal control frequencies, maybe you should one day just for variety. Who knows, you might catch a pursuit of a four legged felon...

In case there is any confusion, Animal Cops is a show on Animal Planet where they follow various animal control agencies during the course of their duties, it so happens they happen to be showing the episides filmed in San Francisco starting last night. I was only pointing out that they did some filming in EPA, so it's not all in SF. I was told they filmed in other locations outside of SF too, but I have a feeling that they came down to EPA just to see if they could jump any hot calls while they did their follow-up investigation on an individual. I also heard that they end up in pursuit (unknown if foot or vehicle) of a person and SFPD gets involved. Not sure when the pursuit will air, or what kind of video they got from it, but I heard it will be aired.

If my post sparked any off topic debate or if this post is in and of itself is off topic, I apologize.

humane cases make for interesting multi-agency monitoring, e.g.
petaluma cat hoarder marilyn barletta a few years ago involved not only
city and county humane offices but also fire and l.e.. and out in
inverness not too long ago there was a 5150 who, if i recall correctly,
beheaded the family cat.... i recently shot novato fire assisting
marin humane and dept of public works rescuing a horse from a septic
tank...

but i haven't figured out what's worth hearing at target yet... ;>

Topic: 36683 Message: 36723

As an update, animal planet, on comcast cable (in my area at least) it is in fact showing the episodes at BOTH 7 and 10 . Worked out good tonight because the 10pm conflicted with NYPD BLUE in which Andy gets his sgts stripes :-)
<<< Only FOUR episodes left ;-(
I noticed last night on Animal Cops the announcer mentioning the units were going "downtown" on two different calls, one actually in visitation valley and the other in Hunters point. He obviously doesn't know the city of San Francisco very well. Neither of these neighborhoods are hardly "downtown," only us natives hear stuff like that. Still, its a good show, Wonder how the neighbors felt after finding out the guy next door had 25 Boas in his garage LOL

I think most of the extra footage on Animal Cops is just "B" roll stuff, shot whenever. They even showed the "SSF Industrial City" sign too, which I know isn't in SF. I didn't get the full details when they came down to EPA, but I'm pretty sure the case tonight of the two injured dogs from the same family a few days apart was the one where they went down to EPA to try to find the breeder of the puppy.

I guess you might not see EPA (or me) on there then...

Fox has had some GREAT footage of a SNOZZLE working at this incident. I am not positive, but it may be from the New York Port Authority, it has the word POLICE on it. Great shots of it puncturing the fuselage and POURING in foam. One witness who actually talked to the Pilot who limped out with copilot and some passengers said he was rolling at about 100mph and FOX further reports it may have been a deicing issue. Good Footage by Fox. The Jet hit at least 3 cars on rt. 46 and actually smashed one against the warehouse in front of the right engine. 2 missing , 11 hurt at this hour.

That is actually no big deal except for the poor guy on the ground that got hit.

When I lived in NYC and did catering for the "real rich" of NYC who owned their own corporate jets I would send the food out to Teterboro via limo :)

Teterboro is a VERY busy airport for private planes.

Yes, Fireboat 1(Phoenix) is stationed with Engine 35 and they staff the FB when it is needed. If E35 is out of service , another Engine is dispatched to the station (Pier 22-1/2) to man the boat.

Depending on the incident , they may also dispatch Rescue 1 and Battalion 3 to ALSO staff the boat.

Fireboat 2 (the Guardian) is Also at the same location and can be staffed with another Engine if needed

The way REDCOMM works is inital dispatch goes out over the primary
channel. Each call is assigned a control channel. Control 2,3,4. This is done
so that the primary channel is not taken up with an abundace of traffic. I would
assume that the marin units were switching to REDCOMM C-4 so they could
talk to Sonoma County Units Responding.

REDCOMM 155.2650
Control 2 154.1450
Control 3 154.1750
Control 4 154.2800

While the above is correct , the frequencies are WRONG , Nina
was correct REdcomm 4 is 154.175

here are the correct freqs

Redcomm 154.310
Control 2 155.265 (coast/River)
Control 3 154,145 (Santa Rosa)
Control 4 154.175 (Valley)
Control 5 154.280 (White 1) mutual aid

Ed (from Kelty 2004) I have HEARD All of these .

However, if Kelty is assigning these frequencies to the areas noted, it's wrong. The control freqencies are assigned based on what's open at the time of the dispatch and have no geographic relevance. Any of these can and are used in any part of the county.

Regards, Jim

hey bayard, thanks for explaining how that works.

naturally i defer to your experience in this realm, but wonder why
would there be a discrepancy? my kelty shows that
redcomm dispatch is 154.310
control 2 (fire-medic coast river) 155.265
control 3 (santa rosa) 154.145
control 4 (valley) 154.17
control 5 (mutual aid) 154.280

have things changed? can

ED

Control 3....154.145 is Santa Rosa's old primary before the County started
dispatching. 154.145 is also San Mateo County's Pacifica repeater. You hear a
lot of Control on traffic on it. So when your in Santa Rosa you hear a lot of
San Mateo traffic but the reverse dosesn't happen. You don't hear Sonoma's
Control 3 in Pacifica.

If that helps great

BTW the way I don't know where Sonoma's REDCOM 154.310 transmiter is but I
hear Sonoma Fire everywhere! Bay Area, Valley, Delta, Monterey Bay Area. I'm
not sure but it may be on Sonoma Mountain.

Yeah, the Redcom system kept all the old frequencies but superceded
their previous geographical assignments. Even so, 154, 145 still ends
up a lot of the time being used for Santa Rosa.

Nina,

The frequencies are correct. It's the idea they only get used in
certain areas that's wrong. They are used in all parts of the county.

Here is the correct line up with PL's:

REDCOM 154.31000 CT 146.2
Control 2 155.26500 CT 123.0
Control 3 154.14500 CT 146.2
Control 4 154.17500 CT 156.7
Ctrl 5/Wht 1 154.28000 CT 0.0

Regards, Jim

I do know, Ed. Santa Rosa area calls are usually assigned to Control 3 because it's the old Santa Rosa FD dispatch and has the weakest repeater. However, if Control 3 is already in use, a Santa Rosa area call will be assigned to any of the other available control frequencies.

Well , sure . I would bet Kelty is , for the most part correct , but its not etched in concrete.

San Mateo usually uses Control 5 as a tac for structure fires in the southern part of the county and Control 2 for MVAs also in the southern part of the county.

However, tonight Redwood City BC 3 who was the IC for the fire up in the hills on Vista (4th alarm) used Control 2 as a Command/Staging channel. Thereby actually using a total of 3 channels for the incident (Controls 1,2 and 5) this forced Dispatch to use white 2 and 3 for a couple of other incidents in south county. Again , they have basic uses , but the need can cause them to change things.

Gary, you can't simply give subscribers digital radios and have them operate them in a trunked mode. Just as with Motorola you have to upgrade the infrastructure also. Also, if a console needs access you have to have a piece of equipment to handle the a/d conversion.

So, in reality it does cost money.

I was thinking more in line as to what San Jose PD does with P25. That is, for conventional systems. I didn't realize the repeaters had to be P25 "ready", but that makes sense.

So whatever happened with the rumor of OPD joining ALCO?

Apparently nobody thought out the exceptions too well....
//////////////////

From the Merc:

FREMONT
32 guns taken in break-in
Store owner blames new police policy brushing off alarms

Henry K. Lee, Chronicle Staff Writer

Thursday, February 3, 2005

As the store's alarm rang, thieves made off with 32 rifles and handguns from a Fremont gun shop early Wednesday, less than two weeks after police announced they will soon ignore burglar alarms unless there was a confirmed crime.

...No arrests have been made. Fremont police Detective Bill Veteran said Wednesday that the department was considering an exception to the alarm policy for businesses such as gun shops but noted that officers rarely catch burglars red-handed.

How many times has Eddy's (Eddie's??) in Mountain View been robbed? It is alarmed. They smash and grab before the cops can arrive. Sure the alarm goes off, but all that does is get the board up process started. IIRC, once of the robberies was done by smashing a vehicle into the storefront.

If it were up to me, the store owner would be required to put all the firearms in a safe at night.

11:36am

The jumper is on SJPD 2 = 460.275, CHP = 42.50
Rollover is on SJPD 6 = 460.325

Everything around 280 and 17 is a traffic mess right now.

From: Erik
Topic: 36735 Message: 36778

The Sonoma County REDCOM Control channels *ARE* assigned primarily by zone. C-2 is generally north and west of Santa Rosa, C-3 is Santa Rosa (because the local antenna site limits its range), and C-4 is South and Sonoma Valley. C-2 and C-4 can be cross-shared if excessive traffic warrants it. C-5 is White Fire 1, a statewide fire mutual aid freq. Units operating at an incident will normally be assigned a REDCOM Tac channel, as the Control channels are intended for response and status traffic. If you don't believe this, I just spoke with a co-worker and his wife about this. His wife is a supervisor at REDCOM. You can't get any better info than that!

Despite input in the formation stages, the fact that AMR is knowingly violating every tenant of interoperability by insisting that White 1 be called "Control 5" seems to be lost on them.

I hope this dosen't come back to bite them some day when some firefighter in on mutual aid can't communicate with them because he dosen't have "Control-5" in his radio...

Don

sorry my head is up a dark place along with my Keyboard

It should have read something like this :

I wish just for once that no one would take any post make here personal or has an attack

just Once:-(

over past few weeks it just looks like every post made that someone has a problem with a comment or statement made here.
Some people don't type very good or are a little mixed up at the moment or are trying just to damn hard...
so I guess what I'm trying to say is can't we just post and get along.

i know 'redcomm' has another lame name for the channel.

in my opinion, any department that decides to rename a major mutual aide channel such as white 1 or CalCord just to match their naming convention is asking for trouble when the time comes to use the channels.

there are also a few departments in the state of california that still think it's ok to use repeaters or CTCSS on CalCord... a big no-no if you read the user agreement.

I think you guys are over-reacting. Just because a dept uses another name
like SFFD did with control 7 on THEIR channels , whats the harm.
sounds like big brother to me.

I think the only time they call it something other than white 1 is when it IS something other than white 1, i.e. a patch or something similiar. Most every department I've seen that has a radio with White-1 calls it that. If a department is UHF, and they have a link from say 485.100 to white, they call it something else.

Topic: 36790 Message: 36794

i've had discussions with many dispatchers in the past regarding the
renaming of mutual aide channels from the ones originally given them.
newer dispatchers in departments where a channel has been renamed not
knowing what channel another dispatcher in a neighboring department is
referring to. firefighters in the field not knowing they can talk to the
neighboring department because of a relabeled channel name on their radio.
i've heard dispatchers discussing this with units in the field as well.
why make things more confusing than they already are? to top it off,
radio education with most police, fire and medical responders is already
woefully inadequate. i'm not saying that every responding agency should
be carrying a frequency directory and know how to program a radio, but
some departments provide next to no education on why there's more than the
3 channels they commonly use in their radios, or even what they're for.

From: caladded@aol.com
Topic: 36790 Message: 36795

I haven't heard any dept. refer to it as anything other than white 1 in a long time. I think the discussion is really a moot point. One or maybe more of the depts on either the peninsula or silicon valley had it as control 14 at one time. I therefore put it in may scanner as channel 14 , made it easy to remember. But that's been some years ago.

From: jjcooke@yahoo.com
Topic: 36790 Message: 36796

The reference was to Sonoma County's REDCOMM, which has White 1 as Control 5. I have no idea why they decided to make this choice but their radios all have an alphanumeric display that says "Crtl5/White 1" so I think it's unlikely that a firefighter isn't going to be able to figure out where White 1 is on the radio. It's a heck of a lot better than the old days when there was just channel numbers and you had look at a chart pasted on the back of the radio or the dashboard to figure out which channel was which. <g>

Regards, Jim

Are you on a cable modem ?

Usually takes them about a week to figure out the traffic pattern before
they shut down the
port for servers.

One of the reasons I dropped cable.

Port blocking isn't unique to cable, but given that cable is a shared
resource, the cable company is more diligent.

I recently went through what I thought was a port blocking incident with
my DSL provider that has a no port blocking policy. It turned out Norton
was interfering with the ports. I'm still trying to figure out what changed.

Note that Norton let me ping the mail server, but not use the mail ports.

Well, ping and 'use' are two different ports, different beasts, etc. You should have incoming PING (or ICMP) requests blocked. Norton I believe can be configured any of a number of different ways. I prefer a hardware firewall. :)

I use a hardware firewall as well.

You ping the server to see if it is up. Then you telnet to the port to see if it is blocked. I could telnet into the default port, but not 25 or 110.

Here we go again goin all off topic and stuff.. ;)

Just for you more technical people...

Non response from a ping doesn't mean the server is down. It simply means the server (or machine) does not respond to ICMP requests. If you could get into the default port (21) but no 25 or 110, it could be a firewall or ISP issue. Some ISPS now are blocking outbound connections to SMTP ports other than theirs to prevent spam...

I am set up to discard pings to discourage hackers, but anyone who has a
server wouldn't do that IF they expect to be reached by the general
public. People have problems, and step #1 is to ping.

Really, this is not rocket science. Read the terms of your ISP. Example:
"Open Policies?Run a Server"
http://www.speakeasy.net/residential/adsl/

For fun and no profit, here is the big kahuna port list
http://www.iana.org/assignments/port-numbers

Suspect described as a white male 6 foot wearing baseball cap and
blue jeans.. Sound like PD units are just driving around looking for
this guy.. Not sure why they have not set up perimeter?

36824. Re: 10851 Mill Valley Chase

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-02-05 18:12:01 UTC
From: stfucode3
Topic: 36817 Message: 36824

This is getting weird. Not sure if this is related.. MVPD now
reporting a citizen just flagged them down and stated someone just
stole their car from East Blithdale.. Black Volvo.. Lisc. SMKDKA
last seen heading towards 101.. Dumb ass left the keys in car..

MVPD now just saw the NEW 10851 car Back up Ralston towards the area
where he ditched the 1st car.. Suspect description matches the
suspect from the first 10851.

36825. Earthquake

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-02-05 18:51:41 UTC
From: Craig Rose
Topic: 5663 Message: 36825

San Jose Fire Department has broadcast the earthquake response message requiring all apparatus to be moved from stations and maintain radio watch for an earthquake that has just occurred.

Preliminary location is approximately 30 miles east of San Jose City Hall with a magnitude of 4.4.

I felt nothing in Santa Clara.

-C-

Air One is the MC Sheriff fixed wing.

LOL about the 2 stolen cars. I imagine Marin law enforcement in general is feeling a little embarrassed right now. :-)

4.4M EQ at 10:43am

Centered:
30 km (19 miles) E (84?) from Alum Rock Park, CA
30 km (19 miles) SW (236?) from Westley, CA
32 km (20 miles) WSW (255?) from Patterson, CA
33 km (20 miles) NNE (25?) from Morgan Hill, CA
36 km (23 miles) E (80?) from San Jose City Hall, CA

19 miles east huh? San Antone Valley if you ask me... Calaveras fault and probably why most of us didn't feel it.

From: Craig Rose
Topic: 36833 Message: 36833

Just got back from incident on Silver Hill Drive in the Almaden Valley area of San José. Here's a brief sum-up.

First reported as smoke coming from a two car garage in a three-story condominium, San José Fire dispatched a full first alarm. Dispatch then informed responding units of an explosion in the garage and the first unit on scene quickly called a second alarm.

By the time I arrived the interior attack had knocked down pretty much all active fire on the second and third floors. There was active flame coming from the garage as a ruptured gas tank in one of the two vehicles in the garage continued to leak and ignite.

Concern arose over leaking gas that had entered the storm drain which may have possibly become an explosion hazard.

There were no reports of injuries, but the fire did displace at least five residents.

I'll have images up today some time. If anyone has any further details to add from the dispatches - please feel free to pass them on to me off the list - THANKS!

36834. Cliff Rescue at Muir Beach

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-02-05 22:44:30 UTC
From: inigo4688
Topic: 36834 Message: 36834

This is on the GGNRA trunking system.

http://www.radioreference.com/modules.php?name=TRSDB&sid=349

Talkgroups:
16 - Law Enforcement 1 (Moved to ICS)
240 - ICS (Incident Command System?)

Also on Marin Co. Fire "Control 4" - 37.10 FM PL82.5
Tactical BLUE - 46.08 FM PL82.5

ICS appears to be a simulcast with a fire mutual aid freq, so this may be ANOTHER case of the White freqs getting renamed. Responding county fire was told to "switch to ICS... channel 15." I think Marin Fire calls White 1 "Control 14." Does this make channel 15 White 2 - 154.265? Haha oh man, I guess whatever works for them...

Units responding:

US Park PD Car 503
US Park PD Car 508 (Staged to direct them in)
Marin Co FD Engine 1585 (From Throckmorton)
Marin Co FD Utility 1535 (From Throckmorton)

Probably more now...

Just an update Marin County Fire units requested their own Tactical (and were assigned TAC Blue) so maybe that whole "channel 15" thing didn't work out.

Yeah Air 1 is Marin County Sheriff's fixed wing aircraft based out of Gnoss field in Novato. I've flown out of there a lot but I haven't actually seen it yet so they must have it hangared somewhere out of the way (maybe on the east field).

It's a Cessna T-41B, which is a fancy government designation for a fixed gear Cessna 172 skyhawk with a bigger beefier engine on it. (A 210 hp Continental IO-360.) Their site says they aquired it from the US Customs in 1998.

Hey folks, just wondering if anyone knew the correct ctcss for Concord PD? I put in the one on scancal.org and it didnt like it (127.3)

Also, has anyone programmed a KYD radio? This is a toy I bought off of Ebay to play around with and see what it can do, but the instructions that come with it are vague at best.

Thanks in advance! :)

Type 1s are reinforced concrete , typically 3-4 hour firewalls . quite common
, think of high-rises.

Type 2s are also reinforced concrete but 1-2 hour firewalls , less common.

Type 3 is brick/mortar ....very common .

Type 4 is metal like a gas station

Type 5 is the most common. woodframe construction...houses etc.

Lots of pursuits in Oakland tonight! This one's somewhere on 580 (beyond that I didn't catch a location, heard macarthur a long time ago). ALCO Sheriff was originally in pursuit, they just called it and gave it to CHP. There were a few Sheriffs still shadowing the pursuit.

CHP Bronze - 42.12

I think this one's 10-15 Code 4.

Different pursuit on Market St. and 27th in Oakland on Oakland TRS Talkgroup 02-011 (PD Patch 3). They're trying to pit him.

Jesus crazy night!

36855. Re: SFFD building types?

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-02-06 22:22:50 UTC
From: gydds
Topic: 36841 Message: 36855

The building types are not just used by the SFFD, they are a national standard as described in the IFSTA guides. San Francisco just chooses to have the reporting comany give a size up with the building type. Not many other departments do that. They are:

Type 1 - Fire Resistive - structural members are of non-combustible materials and are of such quality and so protected that they will resist the maximum severity of the fire expeced within the strucutre without collase. ie. most big skyscrapers

Type 2 - Non-combustible - materials of construction do not contribute to the development or spread of fire. Cannot withstand a burnout of its contents. ie. Costco warehouse

Type 3 - Ordinary - Exterior bearing walls are of non combustible materials; and foors, roofs, and interior framing are wholly or partly of wood of a smaller dimension than required for Heavy Timber construction. ie. H style apartment building

Type 4 - Heavy Timber - bearing walls are non combustible, columns are not less than 8 x 8, beams and girders no less than 10' in depth, framing members no less than 4 x 6.

Type 5 - Wood Frame - exterior walls, bearing walls, roof, floors and their supports are wholly or principally of wood or other combustible materials. ie. most of our residential homes

Hope this helps.

Yes. Unfortunately.. :)

A few times.. I think two of them were then followed by "11-95" (traffic stop).

Once was because (at that time) I had a rear deck light that I accidentally switched on. More of a 'courtesy' stop - i.e. are you OK?' than a cite or ticket.

Another time, back when I had a 250 cc Moped, I was enroute to photograph a fire in Palo Alto, I made a California-ish stop at a right hand turn, and about a block behind me see a PD flip a ... ahem U-Turn and turn his lights on.. I pull over thinking he's going to the fire, he tells me to make a right hand turn at the intersection. I hear him asking dispatch what <PP> on my license plate means, they tell him (Press Photographer). I start to take my helmet off, he tells me not to bother, and sarcastically asks me where the fire is. I tell him. He looks at me, and realizing I'm not being an Adam Henry radios dispatch and asks if there is a fire at that location, they advise there is, he cautions me to be more careful, and lets me go.

Back when I did news photography, the PP plates seemed like a brilliant idea - "Cops will know you're a photographer!" people would tell me.

I have had off duty cops ask me what the plates meant.

I'm debating going back to regular plates, or the Patriot plates.

Evan

Hi Steve,

It happens to me at least once or twice a month. I live in a small town and the Police have nothing better to do than run license plates in between high speed car chases through residential neighborhoods, and jumping over fences on leg bails.

Of course the fact that my Bronco looks like a porcupine because of all the antenna's on it has nothing to do with how often my plates get run. (LOL)

I guess it depends on the agency, but I though the cops like to light 'em up or give you the solid red, get you to stop, then call dispatch and give them your plate. So to hear your plates while driving would be odd.

I'm trying to recall the agency, but I believe it was Richmond where the cop would in one transmission indicate he stopped a car, give the plate, and say "we are code 4". This made little sense to me since if they are just calling the plate, how do you know you are code 4? Your problems could just be starting.

I've always presumed that, unless you call code 4, dispatch was sending someone. So it was a preemptive strike against having your pals driving all over to back you up when you're just writing a ticket. If you pull over someone for running a red light, they pull over right away, and look scared -- why not? Berkeley does this a lot: code 4 long before they make contact. Sometimes they'll say "I'll advise" meaning "check back with me if you don't hear from me in a few minutes" -- but I think cops are good enough at sussing out a situation without making contact.

I'm not a cop, but I would guess that experience and confidence would get you pretty far.

Disagree Gary, I have actually heard my plate twice. The time the female Menlo Park officer ran me I was parked near the dumbarton bridge, wasn't actually moving, but she called it in before hitting me with her brights and the red. I have heard SFPD do Plenty of rolling 10-29s and other agencies as well. Makes sense to know who your dealing with before stopping you.

yup, happened to me, deservedly -- i plowed right through a red light
in a confusing intersection of san rafael. saw the red lights,
pulled over, and kept listening.

and then there was that 415 verbal i got into with a couple who had
left their dog locked in their mercedes van at high noon on a hot day
(windows rolled up, naturall) while they were shopping at nordstrom's.
but that's another story, the details of which are best left for off
list inquiries.

I think it depends on the agency. I know someone who did a ride along, and the procedure I describe was used. I suspect the cop doesn't want to call the plate, say they are going to pull them over, then lose the person in traffic.

I had a ticket where I made it through a left turn and kept driving on the road at a normal speed. The cop sat through the light, turned, and finally caught up with me a few minutes later. BTW, it was a ticket I beat in court.

Actually, after mmaaany (too many) years in this business this is still one of those little things that bugs me.. If you look at (most agencies anyways) what code 4 means it makes sense:

Code 4 = no further assistance required

Pretty self explanatory...hence the example on your traffic stop....Im making a stop but I dont need any assistance. That doesnt mean in a minute I WONT need someone if the situation changes, but for now Im ok.

Code 4 gets "slanged" so much it drives me crazy. I.E - heard often:

"Im code 4 but continue another unit.." Huh?

"Im code 4 FOR units".. I ve gathered through the years that this means that things are kind of still out of hand, but more cops wont make it better...but again...straight code 4 should be sufficient here..

"I ll be code 4 once the next unit arrives..." This one isnt soooo bad, but still..."Continue 1 unit only please" seems to do the job, and THEN put out the code 4 after the unit gets there.

There are many other examples...and its really no big deal....but since it came up.. Fire has this stuff somewhat easier to understand with the Fire Contained vs. Fire Controlled terms but I understand on LE freqs air time is a little more precious...

I've had my plate run a few times. The PP Plates do help but not all cops know what they mean. I had a CHP pull me over after whizzing by him S/B 280 @ Trousdale. I was on the way to a HAZMAT at HWY 92 @ HWY 35 at the vista point. Told him what was going on and he let me go. I saw him in the rear view mirror looking at his license plate book and scratching his head.

Another time I didn't have my plate run but my house was run! We had a burglar alarm. I was near my house and heard my address come over my scanner. Back then I had a Bearcat 220RC (The old rolling zero's...I miss those) anyway. My friend was with me and we flew to my house. I came around the corner and the were 5 SFPD cars by my house. I slowly approached an officer and said I lived there. He asked for ID and said the alarm was going off. Well, they completely checked the house. It turned out to be a faulty connection on the bathroom window.

Hmmm. That's a new one on me. Maybe it's an SFFD thing. In all the years of being a firefighter (and lots of fire science classes), the Type IV construction has always been referred to as a *heavy timber* construction. That means substantially larger/thicker wood members than a common Type V construction.

You must mean "11-86" (traffic stop).

In my earlier years, I would be out late quite often. Vehicles
driving around late at night in suburban areas frequently get their
plates *tripped* (10-29/10-28) by bored cops. It happened a couple
times, with no 10-7T afterwards.

Yep happened to me last Feb... I was just coming back from chasing SJFD Station 14 crew to a false call, and I was heading back and Campbell PD was running a speed trap on Hamilton. All of a sudden I see a cop behind me with his lights on, so I turned right to go to my house from hamilton and he turned to follow me, so I turned left onto my street and he req'd to dispatch "I don't think this guy is gonna sto......Wait, Campbell 11-95 (cross streets)". He then ran my plates which of course came up clear and current to the house I had just pulled over in front of... My own house. He advised Code 4 and walked up just as I shut the scanner off. Now mind you, my street is about 500 feet from Hamilton, so I really wasn't trying to run from him.

Not me, but my plate.... my wife took my the 2 year old (1981 year model) ex-CHP Dodge
Diplomat (I REALLY miss that car at times.) It had SEVERAL (2 Ham, 1 CAP, 1
American Red Cross, 1 cell phone and 1 scanner antenna on it.), but was nicely painted, had
real wheel covers and looked like a normal civilian Diplomat sedan. The car had my Ham plates
on it and in1983, Ham Plates, Exempt Plates, PP plates and several others were NOT
in the computer.

So , this ASO deputy runs a routine 10-29 on my plate (we still have NO idea why) and
when disptach came back with a "Not on File", he went appoplectic on the radio,
demanding to know why it was not on file. All the while, I am talking to my wife on the cell
phone while he is following her and losing it. Finally, one of the detectives (who was
also a friend of mine) has him 10-6 to the alternate channel and explains to him about
not on file plates.

He followed my wife all the way to the store, waited and followed her all the way home.
Never had another problem with him again, but he always gave me a dirty look whenever
I passed him in that car (or even subsequent cars with the Ham plate on them).

There's typicall two codes for a traffic stop - 11-95 & 11-96. 11-96 is a traffic stop with (request) for a fill unit. Most agencies I hear a nightime stop is a automatic 11-96.

Except in Milpitas, which uses 11-96 for routine stops... which is their
standard
SOP for two officers for contact/cover on a stop until Code 4.. LOL

As a former public safety dispatcher during that time period, I can assure you that
they WERE in the DMV computer. Even press plates.

You just had to know how to run them, and what category to run them under.

BTW that's how we stayed awake on midnights in the winter.. going through the procedure manuals, and
looking for weird stuff to stump the other dispatchers.

I heard my plate run a lot back then... as I had a rather unique personalized plate that came back with
confidentiality, and that DMV never caught the meaning of.

Out of state cops in small towns are the worst for randomly running plates. I was mountain biking in Oregon one time, and took the scanner... I think
the Local po-dunk department ran almost every car in the motel parking lot for wants/registration that night.

Now that you mention it, the rolling checks are common in San Jose, but I don't recall other departments doing this. So yes, checking the plate before the stop is common in some department. I suppose if they had a two man unit, the other guy would be punching up license plates via data link so you would never hear the call.

A bit OT, but California now has a law similar the to federal Freedom of Information Act. It may be possible to find out who is running your plates (unknown to you) via a request to the CADOJ or perhaps DMV. In a tour of the Milpitas PD dispatch, I was informed that there is a charge for each plate ran thus records are kept. There are privacy laws concerning license data, so you need some reason to run the plate other than "she looks hot." Some Sunnyvale cop was running plates on the side for a civilian organization and got caught.

I recall that.. even somewhat recently. I forgot the 'code' for Press Plates. But when I went to the DMV for something, I remember talking to the person, she asked for my license plate. I told her PP<XXXX>. She ran it, and told me it's not valid. I said yes it is, it's a press plate. She said Nope, that's not right. I told her she had to run it as a trailer. She said Is it a trailer? And I said no, but you need to run it as a trailer. She gave me this "I know what I'm doing, you don't" attitude, and told me I was giving her a incorrect plate. I told her it IS PP<XXXX>, and it's run as a trailer. She typed in again just PP<XXXX>, and nothing AGAIN. I told her she needs to run it as a trailer (3rd time's a charm?) She looks at me again "Is it a trailer?" Finally giving up, I said "Yes, it's a trailer." She punches it in, then says "Huh.. yeah that comes up, but it says it's a Ford Taurus. That's not a trailer!" I felt like saying something quite rude, but settled on "Yes, that's correct but that's how you have to run it."

This was pretty 'recent' - last 5 or so years.

The DMV. :)

Take your press credentials to the DMV and apply.

California Vehicle Code Section 5008:

5008. (a) Any person who is regularly employed or engaged as a bona fide newspaper, newsreel, or television photographer or cameraman, may, after the requirements for the registration of the motor vehicle have been complied with, also apply for special license plates, and the department shall issue special license plates in lieu of the regular license plates. The special license plates shall be affixed to the vehicle for which registration is sought and shall display the letters "PP" enclosed by a shield.

The applicant shall, by satisfactory proof, show that he or she is a bonafide newspaper, newsreel, or television photographer or cameraman.

(b) The department shall not issue more than one set of the special plates to any person.

(c) In addition to the regular fees for an original registration or renewal of registration, the following special fees shall be paid:

(1) Twenty dollars ($20) for the initial issuance of the special plate.

(2) Twelve dollars ($12) for the transfer of the special plate to another motor vehicle.
Amended Ch. 1273, Stats. 1982. Effective January 1, 1983.

<<<snip>>>

My deputies tell us the plate, description of your vehicle and location
of stop before they make the actual stop. That way we can tell them if
the tags are expired or if the car is stolen as they get out of their
patrol car. If it is a stolen vehicle it saves them having to retreat
back to the patrol car to do a felony stop.

That is how most agencies in So Cal do it, with the exception of CHP who
never call in a traffic stop till after it has been made and they want
to run someone.

Attitude.

Felony stops are at gunpoint, involving more than one unit, lots of shouting, and frequently shutting down traffic until the subject of the stop has been handcuffed and placed into custody.

Then the questions start.

Don

36889. Felony or regular vehicle stop

Nina, if your ever in a vehicle that they pull a felony stop, you WON'T be happy. You'll be looking down the barrel of a . 40 . 357 12 gauge or some other weapon(s).

Felony, also known as High-Risk stops, are for the officers protection because they have reason to believe the vehicle is either stolen or wanted for some violent offense or they believe you have a weapon etc.

Watch COPS much? They show felony stops all the time. Those in the car are brought out one by one and are told to keep their hands up and brought towards the rear of the vehicle and told to prone out on the ground. you will more than likely see a minimum of 3 officers, usually more for their protection. Everyone then gets cuffed until they can confirm something I mentioned above or they find out you OK in which you get released.

> A Felony , or high-rise stop , is done for vehicles that
are stolen or wanted in some violent crime or they believe you have a
weapon etc. Officers , usually several , pull you over with guns
drawn and the occupants are brought out of the vehicle one by one
with hands raised . they are made to move to the rear of the vehicle
and " proned" out on the ground so officers can search and cuff those
inside.

Perhaps you've seen this on COPS , they do it all the time on that
show.

If they DON'T have any of the above reasons, you'll usually
approched with guns holstered , although you may see his/her hand on
the weapon per training.

Vehicle stops are one of the highest type incidents in which
officers are killed.

Hey Nina and the gang,

snip<since CHP is getting out of the business of issuing media credentials, i wonder what the dmv will accept as "satisfactory proof" of bona fide employment/engagement. clips? hmmm.

is there any advantage with regard to scene parking or access in the group's opinion?>snip

As you know I have press plates and it has helped on a few occasions. One at the scene of a fire where I was going to park and walk up the hill to the fire but when I pulled in they pulled their cars back and let me through, that was surprising to me.

Another time was when there was a fire in the Mairn Headlands near the GG Bridge and an Marin IJ photographer asked if I could get him in closer to the fire since he didn't have any id on him. He got in the car with me and we went through 3 CHP roadblocks and right near the fire location.

Im sure Brian can answer this one better then me but the most important thing I have found is just staying in the background and out of the way of emergency personnel even though I know many of them on a first name basis and show them the pictures or video afterwards.

Nina,

I have no idea about what's being accepted for PP plates now but it does help to have them if you are going to a major incident. If nothing else, a press area is usually set up closer ot the incident than we let the general public and a PP plate will get you to the press area. Most cops tend to be a little more tolerant of speed violations for PP plates as well as long as it's not too over the line if they realize you are headed for a major incident. The down side is there are a few cops who don't like the press at all and will look for reasons to stop and ticket PP plates.

I've had my plates run many times. Even though it's my POV, I'm one of the SAR Coordinators up here so it is code 3 (CHP permit) equipped but unmarked and looks like something "official". When they run the plate, it comes back as confidential. Most officers know that means the vehicle is registered to someone in law enforcement. I have been stopped on a few occasions and asked to show ID, sometimes when I've been a little over the speed limit <g> but I've never been cited. Most of the time they just want to look at all the junk I have in the back of the Explorer.

Just as matter of interest, all FBI vehicles with California POV plates will come back "No Record". We had one way up in the crime scene area during the Polly Klaas search and it came back as "No Record". We had about 10 deputies trying to find the occupant or occupants of the vehicle until two FBI agents finally came strolling out of the woods a half hour later. They had forgotten to notify the command post where they were going and told us that all FBI vehicles

never get in the DMV system except for getting plates.

Regards, Jim

Terms like "No recond on file" , "Confidential" or even "Exempt" make it easyer for both Dispatchers and Officers in the field to understand "Who" the vehicle is. But one County in Washington State started a new trend. All unmaked cars come back to "Kustom Concrete Products". If someone in the same County ran the plates --maybe they might know. But else where -- the driver could most likely get pulled over. The DMV allows Drivers to use a P. O. Box -- for Drivers Licenses -- but NOT for vehicle registrations. So someone can still find you.

1 March 2002, Travis AFB, parking lot of the Base Exchange. I was operating mobile and apparantly that scared someone. When they ran my Amateur plates as personalized and got a "no listing," I was questioned by people with M16's at ready -- magazine inserted -- while they tred to figure out if I was a terrorist.

More recently, in Kirkland WA, someone was scared by my antennas at a shopping center. "No listing" again... the (fairly young) policeman got me out of CompUSA to ask questions. Did NOT like my saying that if others were scared that was their problem, not mine. His Corporal showed up and said "Ham operator, huh?"

It just goes to show you, these agency-defined codes are confusing.
In the north Bay, most agencies use 11-86, 10-7T, or "traffic stop"
when they are pulling a vehicle over. 11-96 is reserved for
investigating a parked vehicle.

Before you go spending big bucks again. Try some simple ferrite torroid
clip-on chokes on both ends of your ethernet cables, and the
wall wart that feeds it. Also your computer power cables, keyboard, etc.

For about $20 you will solve most of your noise problems. It did mine.

11-95 (vehicle stop) and 11-96 (high-risk vehicle stop) are very common around the bay area and south bay. at least for the overall bay area region, the ones you've stated i've never heard of and are not the most common.

on this thread in general though, agencies need to just do away with most of the codes and go to plaintext. the verbalization of most codes takes almost as long as simply saying them in plaintext.

You are right but it's the router. I already put torroids on all of the cables, power is coming from a 12 volt source and not a wall wart,
(everything that runs 12-13.8 V is run from a Astron M35 (35 amp power supply) running eveythning but H/F) through a MFJ power strip with banana plugs.
and the simple test was remove power from the router and noise is GONE (did not remove PS just took power from router)
So I still need to do this trade if anyone can help....

Hey Jim,
Could you please answer a few related questions for me?
How much trouble did DMV give you to get the emergency vehicle permit? What did you have to show them? and Is your vehicle marked in any way so as to let PD know you can run code legally? From what I read of the law the private vehicle has to be dedicated to the SAR or Rescue use?

IE:"Authorized Emergency Vehicle Permit
2416.
(3) Firefighting or rescue equipment designed and operated exclusively as such."

I ask not only out of curiousity but need we have a CDF certified water tender and want to add a light bar and strobes we were going to go amber but maybe we can go with code 3 reds like North tree fire?
Also we are currently training two SAR dogs and wonder about possible emergency lighting etc for our transport truck which has radios, GPS etc I also have numerous rescue certs would this be qualifiying. Once we are set up we are going to start a private SAR service.

one of our many websites--> http://Calhydro.us (Just loaded it up I know about the broken links text problems etc.working on the HTML everyday)
Thanks Bob

I also know from experience that the Fed PD at Yosemite Park runs every plate in the parking lots at the hotels and probably campers too I had a expired parking ticket out of Oakland and they knocked on my hotel room door(Yosemite lodge)but let me go with a promise to take care of it(girlfriend got it and never told me).
Also the Sheriff out here runs plates at the local bar (Banta Inn) they came in one night and hauled some lady out of the bar for having the wrong plates on her car they did not match description of vehicle.

Jim can probably give you a better answer, but it's not up to the DMV - it's up to CHP and the agency you're with. The DMV isn't involved. Your agency needs to first approve it, then CHP needs to inspect / photograph it. There's a few requirements that have to be met - at least one steady red light, a siren with certain tones / db rating, etc. But say firefighter Bob with even Big City FD couldn't go to CHP and get a permit to run red lights and a siren in his family Tahoe.

>IE:"Authorized Emergency Vehicle Permit
>2416.
>(3) Firefighting or rescue equipment designed and operated
>exclusively as such."

Well, yes, bur there's exceptions and such.

>I ask not only out of curiousity but need we have a CDF certified
>water tender and want to add a light bar and strobes we were going
>to go amber but maybe we can go with code 3 reds like North tree
>fire?

Who is "we"? Cal Hydro?

If your agency is one that should be running red lights and siren, you shouldn't need to do anything more than go to CHP and get the proper approval. Maybe there's more I'm missing, but I believe that's it.

But your insurance will likely go way up. And chances are CHP would want to know that your drivers have taken a code 3 driving course. Remember - if you run a red light, and hit me (when I had a green), I failed to yield to an emergency vehicle however you are at fault.

Just to throw another code into the jumble of communications. In the small
town I live in near Stockton, the Police use 813 (Traffic Stop) and there is
an automatic fill unless they give a Code 4.
Just one more reason for plaintext.

11-95 (vehicle stop) and 11-96 (high-risk vehicle stop) are very common
around the bay area and south bay. at least for the overall bay area
region, the ones you've stated i've never heard of and are not the most
common.

on this thread in general though, agencies need to just do away with most
of the codes and go to plaintext. the verbalization of most codes takes
almost as long as simply saying them in plaintext.

Here in the San Luis Obispo Area they use "Traffic", "Code 9", and "11-96" for all their routine traffic stops, depending on the agency. LAPD uses "Code 6" for their traffic stops. I know in know Fresno PD uses "Traffic" and I have also heard other agencies in the Valley use "11-96" for routine traffic stops. I've also heard units in Monterey County say "Traffic" and "T-Stop" when they are making a stop...

From: R O'Connor
Topic: 36909 Message: 36909

Thanks for the quick response Evan,
Well no "Agency" involved much like northtree fire (http://northtreefire.com) and other private fire businesses we provide fire ready (per CDF description i.e.: CDF/NIFC licensed radios, wildland PPE, fire hose, drafting and dumping capabilities etc)and support Water tenders for CDF, USFS, and BLM contract fire fighting and may someday expand into providing private fire engine companies. Northtree has code three equipped tactical water tenders (http://www.northtreefire.com/fire_equipment/tenders.php) and they are not connected to any "agency" so I am confused by your response about your "agency" approval comment and I was trying to find out how Jim can have a private code 3 vehicle under the existing law which I attached below. But apparently you are right about CHP vs. DMV issuance.
Apparently under the statue we (CalHydro) would have to dedicate our fire ready tenders to just fire fighting which we may choose to do since the support tenders could still accept our construction contracts.
This is all research right now and because of problems with safely accessing fire hydrants last year at fire scenes during the night on public roads we will probably just go with amber lights and strobes at the very least for now.
Thanks Bob

Authorized Emergency Vehicle Permit

2416. (a) The Commissioner of the California Highway Patrol may issue authorized emergency vehicle permits only for the following vehicles, and then only upon a finding in each case that the vehicle is used in responding to emergency calls for fire or law enforcement or for the immediate preservation of life or property or for the apprehension of law violators:

(1) Any vehicle maintained in whole or in part by the state, a county or a city and privately owned and operated by a marshal, deputy marshal, or

person who is a member of, and who receives salary from, and is regularly employed by, a police department or sheriff's department, provided the state, county or city does not furnish to that person a publicly owned authorized emergency vehicle.

(2) Any vehicle owned and operated by a public utility, used primarily to accomplish emergency repairs to utility facilities or used primarily by railroad police officers, who are commissioned by the Governor, in the performance of their duties.

(3) Firefighting or rescue equipment designed and operated exclusively as such.

(4) Any vehicle operated by the chief, assistant chief, or one other uniformed person designated by the chief of a fire department organized as provided in the Health and Safety Code or the Government Code or pursuant to special act of the Legislature.

(5) Any vehicle of an air pollution control district used to enforce provisions of law relating to air pollution from motor vehicles.

(6) Any vehicle operated by the chief of any fire department established on any base of the armed forces of the United States.

(7) Any vehicle owned and operated by any fire company organized pursuant to Part 4 (commencing with Section 14825) of the Health and Safety Code.

(8) Privately owned ambulances licensed pursuant to Chapter 2.5 (commencing with Section 2500).

(9) Vehicles other than privately owned ambulances used by privately owned ambulance operators exclusively to transport medical supplies, lifesaving equipment, or personnel to the scene of an emergency when a request for medical supplies, lifesaving equipment, or personnel has been made by any person or public agency responsible for providing emergency medical transportation. These vehicles shall display a sign or lettering not less than two and one-half inches in height, in a color providing a sharp contrast to its background, on each side showing the name of the ambulance operator.

(10) Any vehicle owned and operated by an office or department of a city, county, or district which is designated by an ordinance adopted by the governing body of that local agency as a hazardous materials response team vehicle for response to hazardous materials emergencies.

(b) The commissioner may adopt and enforce regulations to implement this section.

(c) Violation of any regulation adopted by the commissioner pursuant to this section is a misdemeanor.

Amended Ch. 824, Stats. 1990. Effective January 1, 1991.
Amended Sec. 177, Ch. 872, Stats. 1996. Effective January 1, 1997.

36910. HERE WE GO AGAIN: Questions private code 3 vehicles

From: Nick in SLO
Topic: 36910 Message: 36910

I love you guys and the discussion that you bring to board but you crack me up sometimes when you talk about all these people that can run Code 3. I remember that last string talking about the water company guy in SF and freelance photographers running Code 3 to get to certain calls. I also remember talking to a mortuary guy that wanted to run Code 3 equipment on his Hearst, so he could get to body pick-ups faster.
I understand from reading this last post that now private Search and Rescue wants to have Code 3 clearance and capability. The thing you really have to look at is liability and the nessicity for you to be running Code 3 in the first place. I'm sure most people think their job is a official enough that they should be running code 3, but realistically that's just not true. Just because you are an official government vehicle or work for or with some government agency, does mean that you should be able to run Code 3 to get to your call faster. Most Department Policies read something like "Code 3 driving should only be used when life is in immediate danger, a violent crime an supervisor authorizes Code 3, you are pursuing a vehicle, responding to an officer down (11-99 or Code 30), or responding to immediate life threatening medical aid calls.
I just don't see the San Francisco Water guy, Freelance photographers and search and rescue, falling under those guidelines. Don't get me wrong, I'm sure all three play an important rolls but we will all be better off leaving the Code 3 driving to Law Enforcement, Fire, and Medics. I hope I didn't sound too much like a Jerk or put anybody down in this post but when you have had real Code 3 training and you know the responsibility that comes with you would know why I think the idea of giving out Code 3 privileges to anyone but Law Enforcement, Fire, & Medics is just not realistic nor a good idea.

I agree on most of that, except Search and Rescue. Imagine it's your son / daughter / relative out in a boat, who called the Coast Guard because they were having a diabetic attack. The closest boat is a Search and Rescue boat. They're 5 minutes away code 3, 15 or more with no lights / siren.

I think your attitude would change to "Give them those lights and sirens!" when the firefighter says "Sorry your <relative> died. Our search and rescue team took 15 minutes to get here because they didn't have lights and sirens. Had they been here 5 minutes sooner, they would have lived."

I agree however that media has no reason to have lights / siren.

To expand on Nick's point about necessity to run Code 3. i just got back from taking my EMD (emergency medical dispatch course). Our instructor was one of the people who wrote the EMD standards. He also is a captain/paramedic for Salt Lake City who is now white shirt in dispatch for Salt Lake City dispatch Center who is one of several test bed departments for EMD standards along with LAFD and Dallas. Many studies have been done on whether and how much does running code 3 actually speed up response times. A latest study was done where response times was only increased by 32 seconds over no code responses.. And that was when in cases of a piece of equipement was not in their first due area. Salt Lake City has very strict rules about running code 3. They only run code 3 on a non structure fire response when.....

1. Its a vehicle accident with extrication
or
2. Its a cardiac in nature medical response.

Other than that. Its no code response.

You have to think about it.. On a call that isn't a fire or something life threatening in nature, does 32 seconds really make a difference in the long run? Risking the lives of yourself and others around you running 55mph in a very heavy piece of equipment for a vehicle fire, fall victim or alarm sounding. The phrase "seconds Count" is being reevaluated widely in the Public Safety arena as of late.

It is stupidity in my opinion for non public safety equipement like tow trucks, photgraphers, private sar vehicles, water or PG&E guys to be given rights to run code 3...

cop4christ@... writes:

I love you guys and the discussion that you bring to board but you crack me up sometimes when you talk about all these people that can run Code 3. I remember that last string talking about the water company guy in SF and freelance photographers running Code 3 to get to certain calls. I also remember talking to a mortuary guy that wanted to run Code 3 equipment on his Hearst, so he could get to body pick-ups faster.
I understand from reading this last post that now private Search and Rescue wants to have Code 3 clearance and capability. The thing you really have to look at is liability and the nessicity for you to be running Code 3 in the first place. I'm sure most people think their job is a official enough that they should be running code 3, but realistically that's just not true. Just because you are an official government vehicle or work for or with some government agency, does mean that you should be able to run Code 3 to get to your call faster. Most Department Policies read something like "Code 3 driving should only be used when life is in immediate danger, a violent crime an supervisor authorizes Code 3, you are pursuing a vehicle, responding to an officer down (11-99 or Code 30), or responding to immediate life threatening medical aid calls.
I just don't see the San Francisco Water guy, Freelance photographers and search and rescue, falling under those guidelines. Don't get me wrong, I'm sure all three play an important rolls but we will all be better off leaving the Code 3 driving to Law Enforcement, Fire, and Medics. I hope I didn't sound too much like a Jerk or put anybody down in this post but when you have had real Code 3 training and you know the responsibility that comes with you would know why I think the idea of giving out Code 3 privileges to anyone but Law Enforcement, Fire, & Medics is just not realistic nor a good idea.

Nick,
No offense taken actually I am interested in the code 3 equipment for use actually on the fire scene which can be very large and include public roads during a wildland fire and for getting thru roadblocks without yelling at the officer that I am part of the fire plan! I was assigned to a task force last year that was protecting a remote private structure and they were completely out of water as the fire approached and I had to get out of the tender and explain this to the CHP guys at a road block which wasted important time besides a water tender can not go much over 55 mph code three or not. Another example of need was last year when accessing a hydrant at lick observatory during a fire I had to completely block a unlighted state road and explain to a few angered blocked motorists that I was acting as a official part of the fire plan and they would have to wait, red lights would of probably soothed them somewhat? As far as initial response we are given adequate time to respond to a wildfire without the need to go code but it wouldn't hurt i.e.: my north tree fire example.
On a personal opinion note I can see the need for many private utilities and SAR (swiftwater,confined space emergencies?) teams needing to go code as much as anybody else they save lives and property too. SF water dept runs many large dams in norcal is the local cop going to stick his finger in the dike? I would want the utility guy there faster than the cop it could be thousands of lives in the balance and without code 3 equipment could find himself behind hundreds of motorist at a road block during a large emergency (think earthquake) instead of letting water out of the broken dam etc. Also would help with the rookie cop told to not let anybody through etc. I think it comes down to a proper Code 3 SOP for the responder.

36915. ETS Activation Tracking Frequency

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-02-08 00:11:04 UTC
From: knavarrejr
Topic: 36915 Message: 36915

Monday about 15:45 hrs I heard county comm announce over the north & central county frequencies that "an ETS activation signal" was heard in the vicinity of the San Mateo Bridge. Dispatcher asked for units to go to the green and advise their location and signal strength. I thought it was a Lo-Jac signal since I was daydreamin at the time of the original call.

24P20 notified that he was getting a hit on his ETS at Brewster and Winslow in RWC.

I show Lo-jac at 173.075 Mhz. Anyone have a frequency for the ETS stolen vehicle beacons?

Ken

Boats Code3? I know they have lights but I don't think that's to move traffic out of the way And in diabetic patients, generally their blood sugar is not going to change that drasticly in 10 min that would effect their outcome. Maybe in less then 1 percent of diabetic calls does a short period of time really change any thing.. I know you just used diabetic as an example..

Just a side note.. I don't mean to sound cold or jaded.. but I don't think you should be on a boat in the ocean if you have serious chronic medical problems.. and if you are and something happens to you. No one to blame but your self..

I agree with nick 100% about the code 3 stuff..

Maybe another name for a Personal Locator Beacon
which would use 406 MHz distress beacon and a 121.5 MHz only distress beacon
freq's?

you guys know me, got to put in my 2 cents too

Ben's comment about the difference between code 3 and non is
interesting. although 32 seconds DOES make a difference in a heart attack. consider this

Several times I have seen AMR rigs running code 3 in heavy traffic and
when then approach an intersection with lots of traffic in front of them they
SHUT DOWN the light bar and siren because they know the traffic in front of them
has NO where to go until their light turns green.....food for thought

PG&E could use code 3 equipment for some calls (IMHO) btw, did anyone
catch the recent incident in SF where PG&E as usual takes its sweet time getting
there BUT this time the news media talking about the fact that the SFFD was
there right away and PG&Es slow response. one citizen complained about the $$$$
the executives got (as I have mentioned) yet they have to call crews from home
for incidents. FINALLY the problem go some publicity :-)

Explorers.....NO WAY.....we had a couple yahoos' in the Fire Reserve who thought they were being cute because they purchased solid red lights (kind you hang in the window) they were immediatly informed if they were caught using them (my ANYONE , LE or SFFD) they would be thrown out of the Reserve. that put an end to that nonsense.

Like I said Salt Lake only has the policy for NON cardiac calls which
would be included in a medical for a heart attack victim.

Many studies have concluded that the use of lights and sirens in an
urban environment only increases the time it takes for emergency
vehicles to get to a call.

you know Ben , I bet most people who disagree with you , but I would NOT (disagree) getting around SF , I few its more important to know the short - cuts and traffic patterns than using a red light and siren. Besides in SF , SFFD vehicles are only allowed to go 35 mph. Trust me , in our private vehicles we went .....uh, slightly over 35 :-) the red lights/ siren draw attention to you and everyone knows a lot of the public become IDIOTS and do NOT pull to the right so your better off without them.

I have YET to read comments from anyone on this list who should have them.
I know some will disagree , but for the most part , it will just get you into trouble.

If your not a cop, fireman, ems worker or other authorized public safety professional in the course of employment, you have no legitimate reason to be driving with lights and siren. Many volunteers think they should be able to run code and often outfit their vehicles at their own expense, but I just think it's wrong. If your a red hot who runs code 3 without authorization and get caught, you can kiss all your prized volunteer position, light, siren, and drivers licence good bye.

Lots of yahoos out there who have no clue what all them pretty lights and siren mean.

CHP just had a pursuit early the other morning on 280 ,ending up around Bunker Hill in the Hillsborough/Burlingame area.

I thought it was funny because they were only doing 45mph

until then ran the Reg. owner and he was born in 22' . Poor old guy, they used the spikes and he had 2 flat tires. Never knew what hit him :-)

raises the question about checking driving capabilities of seniors. Another hot topic.

Volunteers can drive their personal vehicles in lawful manor to the firehouse or other meeting or staging place. If they want to run code 3, they can then get in the agencies authorized emergency vehicle and proceed the scene of the incident. I don't know enough about private fire fighting businesses to address that portion of the question.

ELTs are emergency transmitters that are carried aboard most general
aviation aircraft in the U.S. In the event of an aircraft accident, these
devices are designed to transmit a distress signal on 121.5, 243.0-megahertz
frequencies (and for newer ELTs, on 406 MHz).

ETS is correct (dont ask me what the letters stand for exactly). Im hesitant to get into too many details on this forum, but its not a huge secret that these are the transmitters that are often used when bait money is taken in a bank robbery. I have no idea what freqs etc.

ELTs are different...

Since I seem to have started this mess, please let me explain my situation and why it has nothing to do with boats, fire trucks, PG&E or any other organiziation.

I am one of three SAR coordinators in this county. I happen to be the only volunteer. Sonoma County is not an urban area, in general. I comonnly have to respond to the helicopter hanger, which is 45 minutes from my home on a good day. The primary reason for code 3 equipment is on-scene warning rather than running code three 45 minutes to the hanger. There are times when running code three for two minutes can help clear some traffic that signifcantly would reduce my reponse time. This probably happens about once a year.

The sheriff first had to authorize the request. I then had to take (and have retaken) EVOC driving courses. I then had to present the letter to the CHP along with my EVOC records to be issued a permit for a RED light and siren. No blue or other funny color, just a RED light. As I said, I probably turn on the siren about once a year and it's almost never in an urban area. It's more likely that I will use it to get a slow-moving truck out of my way on a rural road.

My situation is probably unique. I don't advocate that anyone else have code three equipment. Please don't take my situation and start generalizing it to things have nothing to do with me.

Regards, Jim

What area are you in when you receive this on the 153? Could it be bleedover from a close extender (154.905)? Tell us some more details.

This is not a CHP freq, AFAIK. I've seen it listed as a Candlestick Park maint freq (City & Co of S.F.). San Anselmo PD used the freq for portable extenders at one time for a few vehicles, but since they've gone to MERA, they probably wouldn't use it anymore.

The DMV database is horribly disjoint. They (at least the window clerks)
rarely know how to look up my ham plate; I sometimes have to remind them
that it's an "H" plate.

That's why the Coast Guard is there and if you have a boat be sure to have a float plan and let someone know when you will be home or back at the harbor. Make sure also that you have a VHF Marine radio on board and monitor Channel 16 (156.800 Mhz) . If you can't monitor 16 have someone on your boat monitor it. Be sure all your meds are up to date. A day on the bay or being at that great fishing spot can turn into a day from hell.

Also known as "Rat Packs" The PD cars have 3 antennas on their roof to DF(Direction Find) the packs. The Transmitters are usually in the bags of money. I don't know how they are activated. The PD cars have a little box in it with LED lights on it. They go where the LEDs light up the most. They get brighter they're close if they have low lights or no lights they aren't close.

The ELT's , EPIRB's , and PLB's are different and meant for Boats , Airplanes , and now people (Mainly Hikers,Hunters)

This might help explain it better:

http://www.intox.com/products/portablesys.asp

I knew what it was from context, but never knew the meaning behind the word. Doing a search on PAAS on the galls.com website didn't turn up anything, though they sell similar equipment.

You might have heard the ads from a local DUI law firm telling you to refuse to take the "paas" (they call it the field test) and insists on going to the jail to get a real blood alcohol test. I think they are depending on your blood alcohol level falling on the trip to the pokey, plus once you are at the jail house you will need a lawyer for sure.

RAT is Robbery Apprehension Team. I think the FBI supplies the hardware.
The frequency is in the 200Mhz range, so most scanners can't pick it up.

Hi all,

KCBS radio reporting there will be a lot of officers working the San Jose downtown Mardi Gras celebration tonight. In past years there have been rowdy crowds, drunks and gang activity leading to many arrests and property damage done to local businesses.

Active freqs should be:
* SJPD 5 (downtown) = 460.400
* SJPD 9 = 460.100
* SJPD 11 = 460.050
* SJPD 17 = 453.650 (DIGITAL)
* UHF mutual aid = 460.025

> Maybe another name for a Personal Locator Beacon

No, County Comm was pretty clear about this. They also stated that the beacon was NOT related to the 211 bank which was going on about the same time.

I found the following website: http://www.pegtech.com/vrecovery.htm Apparently Pegasus Technologies has several different systems in place. Unlike Lo-jac where the victim reports his vehicle stolen and Lo-jac dispatchers activate their beacon remotely the ETS (Electronic tracking System) is a "smart" system that activates itself if an access code is not entered everytime the vehicle is started/moved.

Looks like Pegasus has units for "RAT Packs", bicycles, and vehicles. They talk about how they can set up a system on whatever freq. is utilized when they set up systems outside the US. Wonder what they have in place in San Mateo Co.? I've heard lo-jac units get activated on 173.075 but this is a new one for me...

I was listening to CHP low band and on 42.620 and the same traffic was
being simulcasted on that freq.

Along with 11-96 meaning "suspicious vehicle stop" it is an automatic
that the unit wants a fill car. At least here in the South Bay Area
where "10 and 11 codes" are used.

negitive.. much to slow.no code 3 needed.. It like some of the CCT ambulances we have.. or even the Tiller trucks going code 3 on the freeway up a grade.. They have all there lights and sirens on .. and they are topped out at 45mph.. as cars are passing you code 3.. its embarrasing.. trust me ive been there.. only use might be for heavy traffic.. but this would be highly unlikley.. I would assume the smart choice would be to keep boats near loading docks or harbors for easy deployment.. Not in the middle of 880 rush hour traffic. Never thought i would be talking about boat code3.. good times =).. love bayscan. there is always somthing new and unexpected on here.

Hey, you brought up the boats going code 3..

Now granted, technically I said "The closest boat is 5 minutes away code 3,
15 with no lights or siren", so I think it should have been obvious I meant
a boat being towed by a truck....

Evan

"Paz" is usually "PAS" (not PAAS, as others have claimed), and it
stands for Preliminary Alcohol Screener. In other areas they're known
as PBTs -- Prliminary Breathalyzer Test.

On some occasionas, I suppose the Passive Alcohol Screener device,
which is held near a person's mouth and basically sniffs for alcohol
on their breath, could be referred to as a "PAS" as well.

FREMONT SWITCH TO REGIONAL DISPATCH RESULTS IN SLOWER RESPONSES

One year ago, the City of Fremont, California disbanded its fire dispatch operation and aligned itself with the Alameda County Regional Emergency Communications Center, a move intended to save about $700,000 annually. Since then, fire response times have escalated from 5 1/2-minutes to about 7 minutes.

I'll be feeding this on scannerbuff.net's teamspeak server on the "special" channel tonight courtesy of Bob Ricci and his generous bandwidth for re-broadcast.

Streaming the above channels plus adding both San Jose State University PD channels, SJPD tac channels, and SCCSO 1 for the transit mall downtown and CalTrain Amtrak PD as needed.

SJ 5 doesn't come in super well because I'm on the side lobe of the antenna, it's a little scratchy, but most of the action last year was on 9 and 11 anyway.

Last year was very good listening. Lots of 211's, 245's and traffic problems.

www.goteamspeak.com for the free application.

radio.scannerbuff.net:8767 for the feed... just be sure to register with a user name other than guest, and you will be able to join the channel.

Enjoy. It will be up all night starting now.

Original message indicated "as needed/necessary".

If there is a gang fight/stabbing at the light rail station like last year,
then I'll patch it in, otherwise
I fully agree... way too busy for the stream, so it stays "in the wings".

8000 command post trailer is now in service, so sounds like they are
ramping up.

In the past most of the action takes place after about 2200 hours and it can run well past midnight.

for those who have yet to monitor this " event" its been a pretty decent scanner evening. Good for us , not so good for business owners in the area........good for glass companies

But , who knows , SJPD is really loading up with a lot of officers for tonight. I think some of the trouble makes take this as a challenge.............btw , hearing STAR 1 on the S/O 1 right now. so at least one bird will be up.

How did the dispatch switch increase response times? It adds maybe 5 seconds for a police dispatcher to hit the transfer button ... at least I haven't seen any similar complaints here in San Mateo County.

Competence could be one possibility. I'm not saying that's the reason, but let me give you an example. Now, I'm as much of a scanner nut as anyone here. But throw me into a seat in dispatch, and tell me to get fire and medics to 1234 Anywhere street, and I'll probably be sitting there for a while figuring out the cross street, which engines to dispatch, etc. So it may take me 5 minutes. However someone who's been there for 30 years could do it blind.

That's one difference, and just a possibility. Skill. :)

ALCO has one dispatcher working Fremont, Union City and Alameda. Prior to this, Fremont did Fremont and only Fremont. Add to this the sending of fire rigs to an address in one city when the fire is actually at a similiar sounding street in another city (have heard this at least twice). Yes, the delay is not from ALCO receiving the call, but what they do with it.

I don't "do fire", but I thought Livermore Labs did fire dispatch for
Fremont. Now it is on the ALCO system.

2141 hours and they are already getting pretty busy. Channel 9/
460.100 is where most traffic is. the CP (8000) is up and working with Air 2
getting images downloaded of different intersections . doing FLIR shots right now.
My GF said she heard SJPD was going to double the number of Officers this
year.....sounds like it, hearing lots of Motor teams , RD teams (guessing
this is Rapid Deployment) MERGE and units from all districts. They are already
making arrests , so far 647F arrests (Drunk in public) sounds like they are
really going to have a Major show of force with little tolerance this year.

Press Release

Date: Feb 9, 2005

Contact: Aux. Wayne Spivak
Division Chief - External Communications
Public Affairs Department
United States Coast Guard Auxiliary
http://www.auxpa.org
516-353-9155
Media@...

California Man Fined by FCC for Intefering with CG Auxiliary Rescue Communications

LOS ANGELES _ A California man is now facing a total of $52,000 in fines afert allegedly interfering with radio communications of the U.S. Coast Guard Auxiliary.

The Federal Communications Communication accuses Jack Gerritsen of Bell, California of violating Section 333 of the Communications Act by interfering with a Coast Guard rescue effort last October 29 on amateur radio requencies.

According to the FCC, the incident involved efforts by an Auxiliarist to contact the sailing vessel Elke-Marie after a storm rendered the boat's VHF marine radio non-operational. The vessel had working Amateur Radio gear, however. When the Auxiliary member attempted to contact the S/V Elke-Marie on behalf of the Coast Guard, using a VHF amateur radio repeater on Catalina Island, "Gerritsen began speaking and transmitting a prerecorded message," according to the FCC.

Although the Auxiliarist radio operator asked Gerritsen to cease operating, he continue to transmit on the frequency for about 40 minutes, accusing the Auxiliarist of declaring a sham emergency in an effort to jam Gerritsen's transmissions.

Within 90 minutes of the incident, FCC agents tracked a signal on the repeater's input frequency to Gerritsen's residence. "Gerritsen's apparent willful and malicious interference with the radio communications of the Coast Guard Auxiliary officer who was attempting to communicate with a ship in distress is egregious," said FCC Los Angeles District Office District Director Catherine Deaton. "According to the evidence, Gerritsen knowingly operates, without a license, radio transmission equipment." In its notice to Gerritsen, the FCC alleged that he continued to transmit "despite repeated warnings and requests to vacate the frequency."

FCC records show that Gerritsen has been fined several times for interfering with government-licensed radio communications. In the latest incident, Geritsen was fined $21,000, bringing the total fines imposed against him to $52,000. Gerritsen has previously briefly spent time in jail on a state conviction for interfering with public safety radio communications.

Gerritsen has claimed that the FCC improperly rescinded his amateur radio license without holding a hearing.

The American Radio Relay League, the national association of radio amateurs, has called upon the FCC Enforcement Division to intervene with the U.S. Attorney's office in the case, saying that malicious interference atttributed to Gerritsen has continued. The ARRL asks that "procedures other than monetary forfeitures be brought to bear."

The Communications Act requires that all radio stations give "absolute priority" to radio communications or signals relating to ships in distress.

Hundreds of amateur radio operators in southern California have repeatedly complained to authorities about Gerritsen's alleged "jamming" activities during the past several years.

The United States Coast Guard Auxiliary is composed of uniformed, non-military volunteer civilians who assist the Coast Guard in all of its varied missions, except for military and direct law enforcement. These men and women can be found on the nation's waterways, in the air, in classrooms and on the dock, performing Maritime Domain Awareness patrols, safety patrols, vessel safety checks and public education.

The United States Coast Guard Auxiliary was founded in 1939 by an Act of Congress as the U.S. Coast Guard Reserve and re-designated as the Auxiliary in 1941. Its 35,000 members donate millions of hours annually in support of Coast Guard missions.

37008. BART Trunking System

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-02-09 09:23:09 UTC
From: inigo4688
Topic: 37008 Message: 37008

Hey guys, I've never monitored trains before and I normally can't recieve the BART TRS from my location in oakland, but either through skip or a new transmitter it's been booming in the last few nights and I've been able to listen for the first time. I was just wondering what the following TGs were used for:

-Trains (Road Channels) - Traffic control while they're running on the tracks?

- Towers (Concord Tower, Hayward Tower, Richmond Tower, etc.)

- Turnbacks (Dublin Turnback, Colma Turnback, Baypoint Turnback, etc.)

- Power and Way - (02-141 & 02-142) - The operators always sound impressive (remind me of air traffic control), just wondering what the significance of what they're saying to the BART system is.

- Power & Support/Central Maintenance (02-037)

BPD, Fire and ICS are all fairly obvious, as are a lot of the maintenance TGs and Tango 1 (ride along mechanics).

I'm just curious about the responsibilites of the operators and users of those TGs and the methods they use to move the trains and keep them safely seperated. Sure it might be boring to a lot of people, but it's something I've never monitored before and I find it intriguing at the moment.

Thanks in advance to anyone who can help,

-Inigo

Dave, I do not think you can blame ALCO dispatch. It's a PSAP (911 puter) going into a CAD (puter aided dispatch) then a kind of SCADA system which then rings the bells and turns on the lights, opens the doors, turns off the stove, etc. all of this on dedicated data lines. So the dispatcher could be in Denver doesn't need to know anything about the area and cross streets are automatic it all comes up on the screen.
My guess if the longer response time is true that its politics -- probably upset about the change so they stretch out the time till they claim to be on scene the reverse used to be true you could watch them go out the door around the corner and claim to be on scene blocks from the incident when they were trying to show real fast responses for political reason's i.e. : taking over AMR med response.(never happened). the FFD union is real strong politically and not stupid and probably pissed that they lost some members(dispatch) it is all a numbers game
FPD also tried for years to take them over to justify their new big wallet dispatch center.
Also for a few years FFD was combined with Union City and the response times in Union City went up! CAN YOU SAY "MANIPULATION" response times are very easy to manipulate but in a few years they will have an automatic GPS enabled vehicle location system and then you will see real numbers and my guess is they will go up at least 33%

Just information from Petaluma but 460.100 was coming in like
gangbusters up here in Petaluma. I must have a great look down the
Bay since monitoring Santa Clara County is often better than trying
to get stations up here in Sonoma County.

I scan a lot from work. Although I am mobile all day and everday in a different part of the bay area and Northern California. I have my HAM H/T and
sometimes my mobile scanner.

I like listening to Fire the most CDF,County Fire and such. PD talks to much
and blocks other calls from coming in.

The counties I am in . San Mateo, Santa Clara,Tahema,Shasta,Sonoma,Napa,Marin,Alameda,Contra Costa,Monterey,San Benito, San Francisco,
Yolo,Solano,Sutter,Yuba and others.

Okay, this one is confusing for me, but it sounds like this was indeed an attempted 187 with multiple victims. Just heard another AMR unit dispatched to 999 Evelyn Terrace for an assault victim. I believe this is related.

Another victim is en route to VMC code-3. Sounds like there are two different scenes for this event. Unsure the method - may not have been vehicular at all. Anyone have clarification?

Date: 2005-02-09 21:39:07 UTC
From: Craig Rose
Topic: 37027 Message: 37034

I am guessing that what happened here is there was an attempted 187 in an apartment at Evelyn Terrace. The suspect fled and was involved in a major injury auto accident near Evelyn and Mary. This is just conjecture at this time.

Three AMR rigs have arrived and departed with patients.

A fourth AMR rig is responding to a separate location for another victim that was assaulted.

Fifth AMR rig has been requested by fire to the site of the 11-80.

Most traffic related to this incident can be heard on the following:

Sunnyvale PD - 482.9625
Sunnyvale FD - 482.7125
AMR - 856.4375

Plane crashes into golf course
An unidentified man was killed Wednesday afternoon when his plane crash landed into a stretch of green at the Rooster Run Golf Course near the Petaluma Airport shortly after takeoff.

According to witnesses, the single-engine Grummann Tiger was flying at about 100 feet when the engine started making sputtering sounds.

George Phillips, who was just finishing a round of golf at the 18th hole, looked up in time to see the plane flying low towards him, wobbling from side to side.

"There was a backfire and then the engine quit," Phillips said. The plane was traveling at a very slow speed when it suddenly just dropped to the right side, hit the ground and spun around, he said.

Rich McConnell, who was working on a roof across the road from the golf course, said he saw the plane coming in low and head a "big bang," followed by a lot of ducks that flew off quacking.

The pilot was apparently killed on impact and his German Shepherd dog was ejected from the aircraft and landed on the golfing green. The dog died a few minutes later, Phillips said.

As of Wednesday afternoon, officials had not determined the identity of the pilot.

The National Transportation Safety Board is due to arrive Thursday to conduct and investigation into the cause of the crash, said Petaluma Fire Marshall Michael Ginn.

From: Craig Rose
Topic: 37043 Message: 37043

Not sure if anyone has supplied the details from today's incident in Sunnyvale, but here's what was available on the KNTV-11 website:

Man Drives Vehicle Into Group Of People

Two Adults, Two Children Injured

POSTED: 7:37 pm PST February 9, 2005

SUNNYVALE, Calif. -- A 37-year-old Sunnyvale man is in custody Wednesday after he allegedly drove his vehicle deliberately into a group of people walking on a sidewalk, according to Capt. Craig Farley.

Officers were responding to reports of a domestic violence incident at approximately 12:45 p.m. when they received a report of a serious accident in the area.

Farley said officers discovered two adults and two children injured in the accident, which occurred near the intersection of Evelyn Avenue and Red Oak Drive.

Witness reports claim that Ngai Fung Fong was behind the wheel of a compact car when he deliberately drove the vehicle into the victims before striking them a second time.

According to Farley, Fong fled the scene and was arrested a short distance away.

A preliminary investigation revealed that Fong was allegedly involved in the domestic violence incident, but Farley could not comment further.

He was unsure of the relationship between Fong and the victims, who were all taken to an area hospital.

Fong was uninjured in the accident.

Farley said the youngest victim, a 6-year-old boy, suffered serious injuries.

A Good Samaritan who tried to chase down Fong's vehicle was also taken to a hospital after complaining of chest pains.

I got in on the tail end of it, but sounded like EVERY s/o unit in Santa Cruz and all but
one paramedic unit in the entire county was assigned.

Never caught the location, just caught radio traffic as fire and medic units were being released.

Sheriff 155.565
Fire Red 154.325

Time to check that website again that records the dispatches and tones, but I forgot the URL

Date: 2005-02-10 17:28:16 UTC
From: bluebag
Topic: 37044 Message: 37047

All of the news media helicopters and planes are now based at Hayward (twr 120.2). Air to air for media/traffic watch in the Bay Area is 124.3 and is quite active in the morning/afternoon hrs. Port of Oakland Airport Ops is 453.90 and might be worth listening to. The airport fire stn is #12 and they will be on Tower and Ground freqs during an actual emergency. Also, some road and parking lot security can be heard on ALCO Tag 16144. As you probably know, the airline traffic landing on rwy 29 by the marina are on 127.2. OPD Helios ID as "Argus" and park near the south terminal. Hope this helps.

E2 and E3 were cancelled. County E12 used for structure protection. A request for a prevention officer was made; Water Tender 1 was staffed by today's prevention officer, so he double dipped. Special call to activate Engine 1662 was made as this was up a driveway that was very very narrow and a Type 3 engine was needed.

Took my Pro-2096 out for a christening tody.

Had Travis programmed per RadioReference.com, nothing...

I seem to remember that Travis has three Base and offsets,
RadioReference shows only two.

Got a Control channel OK and had some transmissions while listening to
individual frequencies, no trunking action though.

Does anyone have a win96 file or the correct settings?

Thanks

Ed in Cupertino.

BTW nothing heard on the California Medical Facility in Vacaville. No
control channel heard on the frequencies listed in RadioReference. Any
help?

Topic: 37059 Message: 37059

Wondering if anyone knows why I can't seem to pickup Fairfield fire (482.7875) anymore? All I hear is some digital signal come on every 30-secs or so. Almost sounds like loud open sqelch mixed in with fax noises. I used to be able to pick it up fairly well until now. This problem happpens at home and in my car with different radios and antenna setups; even miles away from any one point. By the way, I live about 10 miles from Fairfield (wasn't a problem before).

Is there any setting you think I could switch on my scanner so that I don't hear this sound (data?). I have the 780xlt, btw.

Thanks in advance!

From: jwpottberg
Topic: 37059 Message: 37062

Since 482.7875 is one of the Marin County trunk channels, and they use digital voice, you are probably hearing that. This freq is a secondary for Mtn View PD down here and I hear Marin Co if I don't use a PL tone. So to solve this, use Fairfield's PL tone of 173.8 on this freq. That should block out the digital signal from Marin.

As to why you don't pick up Fairfield FD anymore, here are some possibilities:

- If the FD is still on that freq and you had indadvertently set the PL tone for 482.7875 to _lockout_ PL tone 173.8 (instead of accepting it), it would match your symptoms exactly. You would never hear the FD and would get everything else on that freq (the strongest being Marin Co). For the 780XLT, the PL tone would be flashing instead of steady in this case.

- Fairfield fire could have moved to a different freq, because of the interference with Marin (if you hear it, it could interfere with them), or for other reasons.

- Fairfield could be moving to talk groups on the Vacaville trunk system. Can you still hear the PD on 483.0875?

- Maybe they moved to one of their existing tac or PW frequencies. Try 482.3625, 460.1375, 483.1625, 453.0125, or 453.0375.

- There is always the direct route - if you have or can borrow an Opto freq counter or any of the newer scanners with Close Call features (like the BC246T or SC230), get close to a station or a rig when they transmit and capture it.

Good Luck
Jim

Hey Evan..............the RETARDS who those idiots who see smoke and DON'T call the fire dept. You got it way backwards

Many years ago , this idiot grabbed his video camera and filmed a structure fire in SF that ultimately went to 3 alarms and KILLED 3 people including a 13 year old and 1 year old girl. the idiot , who was a writer for the San Francisco Chronicle , then had the balls to accusing the fire dept of having a slow reponse. The fool was exposed when asked if HE called the fire dept to report the fire to which he replyed YES

The tapes showed 2 calls (it was late at night) were received as well as a street box pulled reporting the fire......both calls were FEMALE

Now THAT is retard.

Now we're getting into whether or not the "developmentally disabled" population should be allowed to call the fire department. This group is for scanning the results of calls, not disecting every nuance of a call, especially since we weren't there.

I can understand that threads can sometimes drift but it has been particularly bad lately. It would be nice to see a mod put a cap on some of these really off-topic threads.

Regards, Jim

First ....to Jim.. one of the reasons bayscan remains so popular is the owner is NOT one of those who likes to censor people and takes more of a live let live attitude and allows for the discussion to drift. So what if it goes a bit off topic now and then and I certainly disagree with your statement that its been especially bad lately. I have seen it WAY worse than this

Secondly for EVERYONE, Moderators only can do certainly things , it is the owner that handles most aspects of the site. George and I are the moderators and can not do some of things people ask.

to Evan , sorry, it WASN'T you ....it was CRAIG T. and I am surprized at YOU Craig LOL LOL , that is NOT your style :-)

37071. New File: Marin County Fire Departments.xls

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-02-12 10:09:41 UTC
From: inigo4688
Topic: 37071 Message: 37071

Hey guys,

I just finished this file. It's a scanners guide to monitoring fire departments within Marin County. It includes all the conventional low band frequencies and who uses them, almost every department in the county (minus a few volunteer stations and I'm working on those), locations of all their stations, and almost every apparatus assigned to each station! It's all in one countywide file and I'm sure with a little tweaking you'd be able to print it out too ;-) (I'll fix that eventually lol).I left the MERA Talkgroups out because it's all being simulcasted from lowband anyway and they're freely available from other sources.

Even you south bay guys might use this, it should supplement Ben's feed at mattlogic.com quite nicely. I know one of them has all the Marin Fire lowband freqs on it, and you'll be able to see what station and address each unit you hear is responding from.

I'm missing smaller stuff like utilities and reserve apparatus in San Rafael and Novato (since I don't live there), and the various volunteer departments out in the boonies of west marin where I used to live. If anyone has any knowledge of these, please email me and let me know and I'll add them. I'd be fun to have the entire county in this file eventually.

Enjoy!

-Inigo

Sorry about the retard comment.

OK OK OK You're right ED, that wasn't like me. It's just that I don't see the point of a "hero" automatically calling 9-1-1 thus emptying out a fire house without a little investigation into it. There is a big difference between a house fire and a BBQ. Wouldn't everyone be a little pissed if their house burned down because the local fire house was empty on a false call, and all you got for fire protection was 2nd, 3rd, 4th perhaps all the way up to 7th due or mutual aid engines?

I'm done, if we don't want this to continue then dont' reply.

Seconds count in a house fire. If I see smoke from across the street, I'll grab my cordless and run outside to check and see - IF I can verify within 30 seconds - 1 minute. If it will take me 3 minutes to run up the street, and other conditions apply (thick smoke, doesn't appear to be from the backyard, etc) I'm calling 911 first. If then I verify it's NOT a house fire, I call back and tell them (chances are they'd continue one unit). Around my area (sunnyvale, Palo Alto, Mtn View, etc), there's one engine per station. That means even with a medical call, there could be a second due arriving for a call, but their response time is generally fairly decent.

Topic: 37075 Message: 37075

Now time for me to rear my ugly head and give my .02 cents worth.

If you want a ON TOPIC ALWAYS LIST, than Please start one (I've tried and gave up because everyone like it here) and while I find a lot of off topic and off colored remarks made here to be way off base and are more ego than fact. (and wishes the Alpha Hotel's would go away, & you know who you are)

and while everyone has an opinion it does not mean that you need to share it all of the time or posted it to Bayscan. (like I really care)

The way the list owner has it set-up is the moderators can ONLY approve or reject messages of the people who are moderated.
and if this list goes back to total moderation (which it has in the past) you'll think the YAHOO DELAY is really fast and being that only the Three (3) moderators and the list owner (that's a total of four (4) people) to go through the all of the messages, which will take awhile.....
(gee so much for breaking news).
So being that this is the good old US of A and not the old USSR, we must put up with the challenged (like Me) and learn the words of my mother
" life a Bi^&h and than you marry one" (thanks Ma) and we will just have to deal with the OFF TOPIC and Colored remarks and go on with our lives

Good scanning and may you not get any intermod today....

Hey Craig, don't feel bad. If everyone contributed as much as you do to this list, it would be super.

I was working in Portland, Oregon as a Security Officer when "dispatch" called me to inform me of a fire in one of the buildings. The whole setup was stupid. They had a letter to the tenants to call "security" in case of ANYTHING including a fire.....dumb. I did NOT patrol the area with a big red fire truck so why call me. They should have had them, of course. call Portland Fire Bureau. Not only that, they give me the WRONG building... I banged on the door to the apt in question only to find the tenant as his girlfriend were,,,,,,,,,,uh,,,,,,,,kind of busy in what some call a "NOONER" (that's as explicit as I am going to get) ...poor guy, he must have hated me. only then does dispatch call me back to find out its across the street (the buildings , 3 of them, were all high rises and I couldn't see the smoke from the first building.

at any rate, I find the correct building and then ask if PFB is on their was (I thought they called them) and find out they had NOT (oh great) , finally they get dispatched and luckily the fire was confined to ONE apt.

point being. NEVER assume someone else has called.. And from a scanner-nuts view, don't you get a little excited when you hear dispatch telling units rolling they have "multiple calls" ? (OK, OK, Gary doesn't) it tells you that they really have something working (usually) !!

Your attitude isn't appreciated or needed. I think you'll find most people in public safety would rather see people err on the side of being too cautious (and calling 911 when perhaps they don't need to) than error on the side of being not cautious. I for one would rather they show up when I'm having a BBQ, than NOT show up when I'm away and my house burned to the ground.

I'll stay out of your area if you stay out of myne? But then again, what is your area?

Inigo:
Good initial effort. When I compile the majority of additional info, I'll e-mail you it. As I posted before, Novato Fire went full-MERA as of 0700 Mon Feb 7. They still get an initial *ringdown* dispatch on F-35 (46.36), but operate on the "D" zone of talkgroups. Control D-2 is the main TG, with the TAC D-4/6/8/9, Command D-5, and Novato Command TGs being the larger incident ones. F-35 was officially *disconnected* last Thurs, but you'll still hear the initial disp simulcasted on it.

San Rafael Fire is the next agency scheduled to go over to MERA. This should take place in the next two months.

Santa Clara County Fire working a large structure fire at 15700 Blossom Hill in Los Gatos. This is a 4th alarm at this time. One fire fighter was hit by down power lines and has gone into cardiac arrest with severe 3rd degree burns. AMR medics have transported him to Good Samaritian hospital (nearby) the paramedics on last call had CPR in progress enroute and had shocked him once with no effect. This does NOT sound good at all.

S.Clara County Fire 154.25
S.Clara Command 1 153.905
AMR Med 91 856.4375
AMR Med 92 857.4375
S.Clara S.O. 156.210
CHP 42.50
Los Gatos/Monte Sereno PD 482.9125

Partial list of units

E6 E1 E8 T1 BC7

E11 E9 E30 Rescue 3 Truck 5 Hazmat 2 BC3

3rd alarm) E2 San Jose units> E17 T9

4th alarm) San Jose Engines 14 - 10 Truck 14 BC10 (ALL SJFD)

I am doing some praying right now .

I should note that Santa Clara county was also involved with a 2nd alarm a bit earlier in Morgan Hill. so the normal first alarm was a bit off. I have to believe Truck 5 and Engine 3 were out of position as they should have been 1st alarm units. Engine 3 didn't go at all and Truck 5 didn't go until after the 2nd alarm .

While I assume this is residential, I don't know that for sure

they were moving some rigs , after the 4th alarm was called so SJFD Truck 14 could set up their ladder pipe. Strickly defensive operations now.

I should note that Santa Clara county was also involved with a 2nd alarm a bit earlier in Morgan Hill. so the normal first alarm was a bit off. I have to believe Truck 5 and Engine 3 were out of position as they should have been 1st alarm units. Engine 3 didn't go at all and Truck 5 didn't go until after the 2nd alarm .

While I assume this is residential, I don't know that for sure

they were moving some rigs , after the 4th alarm was called so SJFD Truck 14 could set up their ladder pipe. Strickly defensive operations now.

Sorry to inform everyone but as of 02/12/05 @ 09:45 hrs San Francisco feed to www.firefeeds.com has gone secure and you'll need membership to listen to S.F.
I have been told by the site manager that the free feeds will be rotated every few weeks.
I'll let Bayscaners know when SF is back to on the free part of the site.

Still no update. But ALL Santa Clara County Fire Fighters
have been released from the incident and are meeting for a debrief at
Sunnyoaks Station. Some off-duty SCC fire fighters are manning some of the equipment
at the fire as well as the mutual-aid companies are still there. In addition
, a call was made for more overhead and Chiefs from San Jose, Santa Clara
City, Mountain View and Gilroy are at the fire and assuming Incident Commander ,
Operations, Safety and Plans.

As Brian said, they were attempting to notify family

KRON was holding the fact he died back for that reason I am sure, BUT they goofed and had the words " Fatal Fire" in the background ,,,,,,,,,,,no one thought to "pull " that from the clip

KGO DID , just now (9am news) say the fire fighter was on the dept for 6 years and recently was promoted to Captain but they were not releasing his name bccause they were trying to find his parents who live in Orange county.....But they did say he died.

One would think KGO should have held back THAT information because there will be some who will be able to figure out who it is with that limited information. For instance those connected in some way with Santa Clara County Fire.

At any rate , sad , sad morning.

I might be out of line a bit but I am concerned on how the media got the
information that a firefighter had died.. I sure would not want to hear
that a family member had died in the line of duty from the media before
I was contacted if i was kin. I would hope that ANYONE on this list
would not be running to the media to scoop this story when they know
that there is a distinct probability that family had not been contacted....

From what it sounds like to me Ben, is the media was TOLD that he had been killed and asked to NOT release the information.

Like I mentioned KRON goofed, as you watched the story, over the shoulder of the anchor are the words "Fatal Fire" but then they DON'T mention he was killed.

Then, KGO DOES mention he was killed but not releasing the name. YET KGO mentions his parents live in Orange County, information I thought they should NOT have mentioned, in fact if County Fire had in fact asked them to HOLD the fact he died, then KGO completely blew it by NOT holding it back.

I'll bet they are more tight lipped next time. As you say, the parents should be notified by a SCC Fire official, NOT through some reporter.

I've learned from people whos job it is to talk to the media:

If you want something 'leaked' in the press, you give them the information,
but tell them not to release it.

If you want something withheld from the press, you withhold it.

For the most part, telling something to someone in the media and telling
them "Oh, this isn't to be released yet" is the equivalent of renting out a
billboard, and you may as well put it on the amber alert boards too.

Then again, some members of the media are smarter than others. :)

Ben and the group -

With all due respect, I think some of us may be giving the local TV media a wee bit too much credit. Some of us assume that news outlets are totally without a moral compass. While there certainly are some members of the media that are less than circumspect, there are also the vast majority that are respectful and responsible.

The way that I read the coverage of this horrible story - so far - is that a couple of news outlets, operating with Sunday a.m. studio crews, may have "screwed the pooch" through sheer sloppiness. To always assume that the media is the bad guy is simply unfair. Yes, there are countless cases of bad media types, but there are far more cases of media folks doing real good for the communities they reach (consider Rigo Chacon).

Again, I am not trying to exonerate KRON or KGO for any perceived mistakes, but it's quite difficult for anyone that wasn't intimately involved in the ENG process to anything more than make broad assumptions.

This is strictly my opinion and I certainly hope that my views do not offend anyone in the group.

37117. Quick response to structural fires...

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-02-13 20:14:08 UTC
From: David K. Z. Harris
Topic: 37117 Message: 37117

My response is based on historical events, from the early-to-mid 80's, but I believe that there are similar situations in our communities today, and there are probably similar circumstances ready to occur in our Bay Area fire departments.

I grew up in an "Eichler" home. One-story, tongue-and-groove wood exterior, and similar construction for the roof, with a tar-and-gravel rooftop. This was a tract of such homes, built in the early 60's. Concrete floor with radiant heat, topped with lots of redwood, and a
tar cap on top. Brick chimeny fireplaces, and mainly gas water heaters and dryers.

While still living there, I was a volunteer for the local FD. After the initial 'stand-by' duties
had been done at the main station (because it was the busiest, so we could meet our basic requirements sooner), I then started splitting my time between the main station, and the one closest to my home.

While the station was less than a quarter-mile from my home as the crow flies, there was a large, long city park in between us. This meant that the shortest route would be about a mile on the road, with three 90-degree corners to get to my street. (And if the preferred way was blocked, the next-best had an additional narrow S-curve on the way. :-( )

One night, I was discussing the offset response time criteria with the shift captain (the got an extra 90 seconds to be on the air for code 3 after certain hours). This coupled into a conversation where I told him where I lived. "Hmmm..." he said, sitting back in his chair.
"That could be a problem someday..."

He proceeded to tell me about the tract, and Eichler homes...how the aged wood burns fast and hot...how the tar roof becomes fuel...and then the bottom line: The department already had a policy for our neighborhood, that if the first-in engine was not putting water
on that house fire within 3 minutes of the initial flame, that they would not even attempt to put water on the structure. Instead, they would initially protect the adjacent exposures!

I wa shocked! But, he explained that the home would be too-far gone at the 3-minute mark. Even if they threw everything at the fire, whatever was left would be smoke- and water-damaged, and unrecoverable anyway, and by diverting resources to protect our home, there would be substantially more damage to the neighbors home. By letting my home burn, they would reduce the damage to the neighbors homes. He hoped that ny folks had some good homeowners insurance. :-|

My guess is that such plans, whether 'official' or not, still exist. Sure, it's a judgement call
on the part of the I.C., made during the initial assesment.

If you think about such a scenario, you can see where I consider that quick, initial call to
9-1-1 a "Good Call". I also support running around the block to check, but I sincerely believe that those first minutes count in a fire, as well as in a major medical call.

As an individual, you can decide when/if to call. I've simply offered some information, and you can choose to believe it or not. Whether this affects your fuuture decisions to call
is also up to you. :-)

Regards,

-Z-

An eye watching in the sky
Friday, February 11, 2005
By Lori Stuenkel
Morgan Hill - Speeders can't see Joe Kingsman soaring 1,500 feet above southbound U.S. 101, but the California Highway Patrol officer and pilot can see them.
"I've got a champagne sedan a half-mile out at 82 (miles per hour)," Kingsman broadcast to two CHP patrol cars waiting on the side of the Cochrane Road on-ramp Wednesday morning. "He's in the No. 1 lane. You can start down the ramp."
Officer Matt Ramirez, first in line, moved from the grassy shoulder onto the ramp, looking over his left shoulder for the sedan.
"He's on your bumper," was the broadcast from Kingsman as the sedan in question sped past the on-ramp and Ramirez flipped on the patrol car's lights and sirens. "You're door-to-door."
Ramirez moved left into the fast lane, now directly behind the Nissan Sentra, to pull the car over to the right-hand shoulder.
It was the third of 13 tickets five officers, plus Kingsman overhead, would issue to speeders in 45 minutes during the morning commute. The CHP is using Kingsman and his Cessna Stationair Turbo 206 more frequently during "maximum enforcement" to catch drivers who speed, drive drunk and otherwise violate the rules of the road. Last week, on another stretch of 101, Kingsman said he caught 15 cars in less than an hour, each going between 83 and 94 mph.
"A lot of times, the officers that are issuing the tickets never even see the speed violation," said Kingsman, a 15-year veteran of the CHP.
He became a pilot 16 years ago and started flying the CHP plane, kept in Paso Robles, eight years ago. Issuing speeding tickets by air, is easier, more efficient and safer for ground units, he said.
"And I go to court less, especially considering the number of tickets I issue," Kingsman said. "If you stop someone at 80 or 90 (mph) - they know."
That's not to say the CHP won't ticket drivers going slower than that, and above the 65 mph speed limit. But when Kingsman took to the air just after 7am Wednesday, the slowest speeder he ticketed was traveling at 81 mph.
The driver of the Nissan Sentra stopped by Officer Ramirez told him she didn't know what her speed was when Kingsman paced her at 82 mph. She was talking to her passenger and simply wasn't paying attention - one of the more common speeding excuses Ramirez said he hears.
Kingsman caught that speeder by pacing her in the air. He flew directly above her, matching her speed with his plane that travels between 50 and 150 mph.

He stayed with her as she passed a marker on the side of the highway, painted by Caltrans for this purpose. One mile down the road was a second marker line, giving Kingsman a second method with which to calculate their speed.
After Ramirez finished writing the woman’s ticket - Kingsman is recorded as the issuing officer - he exited the highway at San Martin Avenue to drive back north to Cochrane, where other officers waited for Kingsman to identify speeders. Some drivers noticed the small cluster of CHP cars that gathered at one point and visibly slowed down.
“There’s not that many of us (officers) to work such a large area,” Ramirez said, referencing a recently-released report by the Legislative Analyst’s Office that says officers are spending more time working fender-benders and crashes and less time enforcing speed and other laws. “The mentality is, people think they’re not going to get caught, so we want to be highly visible.”
The officers were highly visible Wednesday, at some points pulling over two or three cars within sight of one another.
Cars exiting at Cochrane were not exempt, either. At least twice, officers sitting on the on-ramp, drove up the grass embankment to the off-ramp just north of them, to snag speeders. One of those speeders, in a Jeep Cherokee stopped just before 8am, turned out to be a suspected drunken driver.
A few minutes later, Kingsman paced a white sedan and pick-up behind it, both traveling 85 mph.
Ramirez pulled over Phani Kalagara, in the sedan, who said he commutes from San Jose to Monterey for work every day and said he had never been caught speeding by the CHP plane.
“I was just flowing with traffic, actually,” he said.
“That’s why we stopped traffic behind him, too,” Ramirez said.

The firefighter killed this morning was Captain Mark Mccormack ,
36 years old. He had been with the dept since 1999 and was promoted
to Captain just 2 months ago. He previously had been with CDF in
Southern California for an unknown length of time. This information
is from the Mercury website. Its does NOT say if he was married or if
he had any children. It also states this was the first fire-related
death in the department since 1947.

I sent condolences to the SCCOFD website and asked if they
were going to set up a specific email address for others to do so.
Should they do that I will post it ASAP

I have heard SWAT teams use a similar method, from memory it is XYZ,
where X is the side, Y is the floor, and Z is the opening
(door/window). It counts clockwise if I recall, so someone could say
"Making entry on 113' and know exactly what they are talking about
without getting into long-winded details.

Most of those police planes have dark wing tips, though I assume there
is nothing exclusive about such a paint job.

BTW, I guess I deleted one too many posts as I saw nothing about
container ships in the article or posts. I know KPIX has been running
spy in the sky stuff during the week. FLIR on UAVs, that kind of stuff.
I think they were showing the Army "Hunter" UAV Thursday at the
US-Mexico border.

That's a great idea. Please do post it once you get it. I had the honor of meeting Capt. McCormack last month in San Jose and took a couple of photos of him and a close family friend at this press event. The 3 shots took me less then a minute to snap, but he was really greatful of the pics.

If you can drop by your local fire station and thank them for being there. If you see a fire truck next to you, please wave...

It worked like a champ. The UAV tease at the end was the show to which I referred.

The trend today is to cover all spectrum in the same box. That is, high resolution video, night vision, and thermal imaging. BTW, most night vision will work down to about 2 microns in wavelength. This is good enough to see a soldering iron glow. FLIR reaches about 10 microns in wavelength. [I'd have to look it up, but the limit of human vision is maybe .65 micron, just for reference.] Technically, 10 microns is not low enough to see people give off heat, but if you remember the black body radiation equations or shape from high school physics (OK, that is asking a lot), the radiation has a long tail to it, allowing enough energy to show up in the range of the FLIR.

Most CCDs have response to about 1 micron, but the manufacturer puts a filter in the camera to prevent near infrared light from hitting the CCD.

I guess to finish this off topic geek fest, the film in the traffic cameras reaches about 0.82 microns. This is low enough enough to photograph your face through a tinted windshield. Its not infrared, but what they call extended red.

From: jim gammon
Topic: 37140 Message: 37140

Did any other bayscanners hear anything on this chase?
Early Sunday morning, 02/13/05 around 02:45, there was a great chase on chp bronze with H30 tracking a guy who evidently had stollen a car. I wasn't listening to the scanner, but when H30 came over, I turned it on and that's when I got in on it. .
They were going south in to Berkeley so Albany then Berkeley were involved. At one point the guy bailed out of the car he was in and actually stole another car with H30 looking on telling other agencies about it. The guy went back
up the Arlington. back down in to El Cerrito. Started coming our direction but got on 580 going towards San Rafael Bridge. He got off, then back on coming back toward Berkeley again but when getting on he messed up his front and back tires on a gard rail so stopped shortly after that near the PG&E yard in Richmond. They thought he had ran in there but the cops nailed him either near or in his car. H30 was really on it. I wish I had recorded the chase with H30 on one channel and other jurisdictions on the other as waranted. I have no idea other then the guy may have stolen several cars as to why
they were after him. The chase ended about 03:08. I'd like to know if anyone sees something in the paper or has any information about it. Jim

Yea good times... the guy actually parked one stolen car and got into ANOTHER stolen car which he had previously taken and aparently stashed... for just such an emergency.

Yes, those would be the "Control E3" and "Tac E4" talkgroups in the county-wide fire radio configuration. San Rafael Fire is on Zone "E".

Is someone logging all of these MERA TGs to a central file? I would like to cross-reference the official MERA TG designators to the five digit numbers.

I caught the chase when I turned on the scanner just before going to
bed. Switching back between CHP and the local PDs involved, it surprised
me how territorial they seemed to be... like they were dropping in and out
of the chase as the jurisdictions changed only to have the perp circle back
into their city. I agree the CHP helo did a great job reporting on the
movements when there were no ground units in sight.

Hey Erik,

Yes, I'm logging\monitoring\guessing MERA TG's the best I can with my 296 here in San Rafael\Terra Linda. I have a MERA .doc Word TG list I maintain and I've also started to build a master MERA .xls Excel TG list.

Thanks much for the clarification of the upcoming San Rafael Fire Control and Tac TG's\Channels. Any info as far as official designators would be much appreciated.

-Roger 11:38am

PS please email me off list and I'll send a copy of whomever wants an updated MERA list.

lol there were a lot of responses for H30 but none were totally correct. The H in that callsign stands for helicopter, but not the one in the previous photo (it's been replaced).

http://www.helispot.com/photos/03835.html

H30 is a Aerospatiale/Eurocopter AS350B2 painted just like the one in that photo, except that's CHP's chopper for the fresno area. H30 is based out of the Napa County Airport (KAPC).

Hope that helps, that's a fun site. They have pictures of the calstar and REACH choppers along with Coco's STARR1, Sonoma's Henry 1 and the San Jose stuff plus Eagle 1 in tilden park. :)

NAPA COUNTY-SANTA CRUZ COUNTY-SAN MATEO COUNTY-
1220 PM PST MON FEB 14 2005

...LOCALLY HEAVY RAIN TO AFFECT THE SAN FRANCISCO AND MONTEREY BAY
AREAS THIS AFTERNOON AND TONIGHT...
...MORE RAIN EXPECTED INTO THE PRESIDENTS DAY HOLIDAY WEEKEND...

A STRONG FRONT IS LOCATED OFF THE CALIFORNIA COAST AS OF NOON.
SATELLITE IMAGERY AND RADAR INDICATE THAT THE LEADING BAND OF THE
HEAVIEST RAIN IS 150 MILES WEST OF SANTA CRUZ. THE FRONT IS EXPECTED
TO MOVE OVER THE SAN FRANCISCO AND MONTEREY BAY AREAS LATER THIS
AFTERNOON...AND CONTINUE INTO TONIGHT. THE HEAVIEST RAIN SHOULD FALL
FROM SAN FRANCISCO SOUTHWARD. LOCALIZED STREET FLOODING IN NORMALLY
POOR DRAINAGE AREAS IS POSSIBLE.

LOW PRESSURE IS FORECAST TO REMAIN NEARLY STATIONARY INTO THE
HOLIDAY WEEKEND...RESULTING IN OCCASIONAL RAIN.

37159. Anybody have BCT-8?

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-02-14 22:26:04 UTC
From: Jake H
Topic: 37159 Message: 37159

I'm trying to dashmount a scanner into the car and was wondering if anybody owned the BCT-8, if they could measure the exact height of the thickest point of the scanner (minus footpads and desktop stand). Trying to fit this in with a stereo in the dash and sweating bullets about the amount of space available.

Specs say the BCT8 is 2.44inches but I have seen specs include the desktop stand as part of the height. I want to make sure before ordering one.

Thanks!
Jake

i was happy to see this post because i've wondered about these new designations --- erik, can you --or anyone-- explain more? i gather that novato is "d' and understand from this post that when san rafael is completely up it will be "e"....

how does the rest of the county figure into the alphabet soup?

anybody know the whole list?

thanks in advance and my apologies if it has been summarized elsewhere already.

Hey Nina, this .pdf is a little old but it really lays out MERA pretty well
in a nutshell including some of the "zones" etc.

I thought that might be the case. Years ago...around 1984, I worked
for a radio station in Sacramento. I was able to go for a ride on
the then CHP Bell JetRanger III that was stationed at McClellan AFB
(I think). What a fun ride. We went to Lake Berryessa and back.
Got some great audio of the think starting up.

Topic: 37140 Message: 37163

You know what looking back on it I'm out of line saying that. Everyone's answer was sufficient, I just wanted to clarify that they no longer use the Bell Longranger and upgraded to the A-Star. It is A LOT easier to come off sounding insulting on a message board than in person, and I assure you all I meant no offense to anyone. I was kinda in a hurry and typed the wrong thing (and also didn't correctly capitalize the acronym for California Shock Trauma Air Rescue!). Enough blabbering, I never meant to offend anyone but for those who were I'm sorry.

Roger: that *zone* info you linked to is the Smartzone system's geographical zones. The Zones I refer to are the talkgroup *banks* (or groups) in the XTS and Spectra radios. The fire XTS portables have 10 Zones programmed in them (A-I,and M). A Zone on a radio has 16 talkgroups in it (hence the 16 *channel* knob on the top of the XTS portables). Those talkgroups are known as *Modes* (1-16). Most people understand Modes as *channels*. Zones are alphabetic, Modes are numeric. Thus, Novato Fire's tactical TG in Mode 4 is known as "Tac D-4". I will try to scan and post a fire talkgroup spreadsheet, then it will make more sense to those who haven't seen it. *All* MERA fire radios have the same Zone/Mode scheme in them. The law enforcement radios have a slightly different program for each individual agency.

I had two scanners going so I could continuously monitor H30 and switch jurisdictions with the other scanner. I think the agencies did what they could do and what they had to do. Worked out fine as long as those hounds in H30 kept on top of the guy which they sure did.

Hey Erik, off topic, but that reminds me of how the analog City of San Diego Public Safety TRS dispatches fire. They just reversed the letter and number places. For instance at my dad's house in mid city east of I-805, all initial fire dispatches would go out on Ch. 7A - Dispatch, and the units for the district I was in would respond on Ch. 8A - Command 3, and their fireground tactical was 8B with a backup tactical on 8C. So the TACs for that same area were just one letter up from the command TG. I really liked the logical structure of the whole thing and how easy it was to scan, because if you caught an incident you wanted to follow on one TG all you had to do was move up one letter to find the same guys. It's exciting to watch MERA develop into something complex like that, not to mention how much it'll help Marin firefighters.

Topic: 37177 Message: 37177

As has happened in the past when you post from your e-mail address as oppossed to from the site on Yahoo it seems to take a MUCH longer time to post.
I sent that message about the 101 accident at 10:00 pm and it posted at like 11:05 pm
Im sending this on Yahoo now from the site and I bet it posts in seconds.
Just a bit of info if you have something really time sensative to post like a chase.

bay city news advises that in federal court in san jose today a louisiana man pleaded guilty to sending an e-mail virus that reprogrammed WebTV users' computers to dial 9-1-1 emergency service without their knowledge. the case was prosecuted in federal court in san jose because WebTV used servers in santa clara.

in july 2002 to about 20 subscribers of the WebTV service received a virus in an e-mail attachment, causing at least ten unnecessary 9-1-1 calls to police, according the us attorney's office. sentencing will be in us district judge ronald white's court on march 14.

Funeral for Capt. McCormack of S. Clara County Fire is scheduled for Saturday. For those who have never seen an LODD funeral, they are quite impressive. I would expect every bay area fire dept to be represented plus from many depts well outside bay area including Southern California as well.

The fatal crash on 280 near Mariposa in SF a few days ago.....driver turned out to be the brother of O. J. Simpson.....

Bad Crash last night in Marin near Frietas Parkway that killed one and seriously injured 2.....vehicle was reported doing 100 mph just before crash.

I am going to bed!

I'm looking for a decent GPS with street mapping detail.

I have a APC SmartUPS 1000 with 2 batteries - one may be bad, Still works, just limited run time. Batteries are available for $27 at Haltek in Santa Clara.

I also have a Vertex VX-10 UHF HT, 40 channels, 440 - 488 or so. Receieves up to 488, stops transmitting somewhere at 486.

I'll swap both for the right unit. Would prefer to meet up somewhere in the local (I'm in Sunnyvale) area as the UPS is HEAVY. It's a rackmount unit, and has a serial connection for monitoring / shutdown / etc.

I can also throw in a Garmin GPS 40, so if you maybe have a decent GPS, but you never use half the features, you'll get a basic GPS without street detail.

Contact me offlist.

Thanks.

Evan

856.9875 tone 123.0

Dispatcher is in Oakland but a lot of calls on potholes, etc. here in San Jose area (I didn't get specifics but one on 880 and Coleman around 7:30 pm). One of their repeaters is on Loma and it comes in clear here in SJ (I'm not using a 800MHz antenna).

There is not much traffic on this freq most of the time except when the weather is bad. Whether this is considering interesting or not (there's no high speed chases, barricaded suspects) but I see their trucks on the road so I'm wondering what they are doing.

I did some searching and came up with these (some data from the FCC site, others from other sites). I haven't listened to these other freq yet:

CALTRANS
Public Safety/Spec Emerg, 806-821/851-866 MHz, Conv. [GP]

Note that you need to program base (406.3), spacing (12.5) and offset (380).

The next time I'm going by there, I'll give it a shot. I've scanned San Quentin a few times, mostly from Berkeley. You need to scan prisons around feeding time to get much traffic. San Quentin does a body count on the hour.

I think the 780 has a data skip. Maybe that will get you past the Apco.

If you are in the tri-valley area, you should program Livermore Labs as well. It fell of the Radio Reference list, but you should find it in the bayscan archives. The Livermore system doesn't have much traffic, though I was in area on the 6th and it seems some alarm or fire crew was working on sensors. They were using a "blue" callsign.

Is there a website or book available that will show what company or agency is on any given frequency? For example I hear a fair amount of chatter on 453.825 but I have no idea who's there. I live in the Oakland area and have a simple non-trunking Yaesu VHF/UHF receiver.
Thanks!

Isn't that the old California State Police frequency, now used by the CHP?

FCC search here

Yes and no. You want to know who's USING a frequency. General reference books will tell you who's LICENSED on the frequency.

For example, let's say I owned a radio shop. I get a frequency assigned to me, and sell airtime on my repeater. Say on PL 100 is Joe's Taxi, on 114.8 is Bob's Plymbing, and 127.3 is Dave's Roofing. All the FCC database would show is my license, say Evan's Radio shop.

A good start, regardless is
http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/index.hts

There's also a good book by Bob Kelty called Industry Radio Systems which lists a lot of business frequencies.

Evan

Visit your local Radio Shack and ask for a "Policecall" frequency guide. Its about $ 20, but well worth it. It lists all of the Police and Fire frequencies on the West Coast.

Its the CHP High Band as they refer to it. it was the old State Police
frequency also a long time ago before the CHP.

Normally they are re-broadcasting the Pink 42.440 but sometimes its the
Bronze as it is now and even the Amber,
its nice to have a UHF frequency that you can listen to the CHP on.

Why not just give the FCC link instead of the advertisement for your
website?

My advertisement --> http://bobonit.com

and another http://calhydro.us

Reeks of sneaky advertising use another e-mail address or friend and you
could advertise everyday here by asking faked simple questions and then
directing them to your site!
To me what would be more acceptable would be to give the FCC relevant link
at the top and include your website in your signature such as.

Something you might check out is tinyurl.com. You go there, put in a
url (even a REALLY huge URL) and it becomes something like:

http://tinyurl.com/52k8q

The problem is Ben isn't really selling anything. He simply said "There's a link on my site". Granted yes, he does list on his website that he does computer consulting, and sells some items that aren't really of general interest to the general bayscan community (SCBA Inventory? Not something the average bayscanner buys). Also, I think just about everyone here KNOWS Ben's web site, so Ben could have just sadi "CHeck out my webpage" and people would know.

Sneaky advertising? No. Lazy? Closer.

I'm usually the first to scream "SPAMMER!" however Ben wasn't spamming in ANY way. He's a regular, he posts here very often, he runs a half dozen feeds free of charge, etc.

He also could much more easily 'spam' his site, which if you want to be picky, he does - "My feeds at www.mattlogic.com are going down for the night."

To call Ben a spammer is pretty funny.

If anything, I think you just called him a spammer so you could spam YOUR website. :-)

Evan

37224. live scanner feeds

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-02-17 04:31:37 UTC
From: jim gammon
Topic: 37224 Message: 37224

Hi Ben. I just checked out the live feeds site that if from the freakofnature site and your stuff is gone so you must have switched over to the metlogic site. I downloaded the media plug-in but I don't know where it downloaded to. In any case, it didn't play when I tried the link again. On the other live feed site, I tried Gklenn's feed from Monrovia and it came right up, even before I installed the plug-in from your site. Jim

From: jim gammon
Topic: 37224 Message: 37230

Still not hearing anything. I found the wmpplugin.exe file and installed it. I'm assuming it "knew" where to install itself. I just get something that sounds like, metadata connecting to media but it never connects, at least not for a minute or so that I left it on there. Suggestions? Ben, email me off list if you want to not bother anyone else with this stuff. Thanks, Jim

All requests for Fire/EMS for the officer were code 3 I
don't know about any later requests for additional AMR units , or anything code 2
was about. I tried to catch an update including monitoring Med 92 but
either missed it or they used a cell.

Dunno.. I thought I heard an inital AMR unit requested code 2, but wasn't sure. I then know for a fact I heard "Upgrade AMR to code 3" - this was on PD.

>.......I don't know about any later requests for additional AMR units ,
>or anything code 2
>was about.

I was monitoring both PD & FD - this was on PD. a S unit, IIRC, requested an additional ambulance code 3. This was fairly early on. Had to take a conference call, but I don't recall it being cancelled.

> I tried to catch an update including monitoring Med 92 but
>either missed it or they used a cell.

For the most part, they're using cell phones. :(

Evan

Why is SRFD E57 seem to always be at the NorthGate 1 Malll? Are they at a Standby point? Everytime I'm there they are either in the parking lot or parked on the street.

And no, they aren't shopping or hanging out at Starbucks...LOL

There's usually a Rescue unit with them but cann't think of the number

I grew up here in Terra Linda on Las Colindas and when I was a little kid every time we heard a TL Fire Department siren my Dad would say "must be lunch time". lol :-) (it was dead here back then) Heck, we had a TL Fire Chief who used to pull people over for traffic violations. Turned out he wanted to be a cop but couldn't hack the academy or story similar to that. Somebody challenged one of his citations on grounds he wasn't a law enforcement officer and the courts threw his and every one else's citations out. :-)

Usually most of the time you see them (Fire) at Northgate1 is food shopping at Safeway. E57 could be doing coverage for other stations either north or south. Fire has been doing a lot more of that here in Marin as of late.

I prefer this player over winamp.

With a bit of work, you can stream from the qcd player too.

Ya know, you've been here for less than a month and almost every one of your posts have had some negative tone. Your profile is one long advertisment for yourself and your "glamour photography" hobby, or business, or whatever. Why don't you just read some posts for a while and learn who are the regulars that contribute to this group and keep your ill-advised views to yourself until you understand things a little better.

BTW, a link to a website in a sig is an advertisement, especially in your case.

Regards, Jim

(1) the FCC web site is full of errors, (2) down or jammed with "users" who do not know how to use the site, (3) because the person requesting assistance is a "Newbie" -- the new guy is not going to be able to understand what or how to look or search -- using just the FCC web page (4) it just jams up the site for use by others that do know how to use the site. The FCC no longer uses "Catagories" such as Police, Fire, Special Emergency. Let the "Newbie" get the basics down first -- by using a "Policecall" or other directory -- first. Anyone can try to sell a book. Big deal. So what. If it helps someone get into this hobby -- and that person understands more --- he or she will be less likely to submit junk to this site. You just don't push the person off of the ship in the middle of the Pacific Ocean and yell "It's only 100 miles to shore". The FCC site has no errors ??? Check stations: KD20665, WPTB710 and WPYW295 and give me the nearest town or STATE.

The Northgate 1 mall is in 56's district. I would imagine 57 would be there for the daily food shopping (lunch/dinner fixings), but they may be involved in *company inspections*. These are annual fire code inspections of businesses conducted by the engine companies. BTW, as of Jan 1, all *Rescue* ambulances in Marin are now called *Medic*.

From: Ed
Topic: 37243 Message: 37243

Santa Clara County Fire Dept website is www.sccfd.org

The funeral is at 1330 hours on Saturday. I would expect at least 100 fire apparatus , probably more, will attend. the location is HP Pavillion in downtown San Jose (better known as the Shark Tank)

Each Fire Department attending is being allowed ONE fire unit for the procession. However , I expect many depts will have more and the additional units will be parking at HP Pavillion as well.The official frequency for the procession is White Fire One .. 154.280

Expect also plenty of Law Enforcement vehicles , especially S.Clara County Sheriffs, CHP , San Jose Police and others. How many Motorcycles may depend on weather as it is predicted to rain.

I would expect those Fire Depts coming from a long distance to arrive Friday night. White 1 and the travel channel , 169.125 maybe a couple to monitor.

In addtion , expect Law enforcement may use LMA , 154.92 for co-ordination .

I can't find the route of the procession , but expect some streets and freeways may get closed. SFPD/CHP closed a large part of Interstate 280 for the funeral of Fire Fighter Mindy Ohler of the SFFD a few years ago, so it wouldn't surprize me to see that happen at this event also. I would monitor CHP on 42.50 , 42.34(blue) and San Jose PD on 9,10 or 11 . Santa Clara S/O will certainly have many units involved , unknown freq BUT Baymacs may be used. 482.3375 (same as 154.92)

If I get any updated information , I will post it.

Ed

Topic: 37247 Message: 37247

From Kelty 2005 . and I have heard them on all four of these

155.475 NO P/L
460.025 179.9
482.3375 114.8
867.5125 156.7

154.92 NO P/L still be be used but is NOT Baymacs , I am posting it for informational reasons

CHP 42.50 San Jose- Ruby
CHP 42.34 Blue

San Jose Police 9 460.100 136.5
San Jose Police 10 460.025 179.9 (BAYMACS)
San Jose Police 11 460.050 110.9

It wouldn't surprize me they use more than one , considering the sheer number of vehicles that will be involved

Fire White 1 - 154.280
Ca. Travel Net 169.125

The information I have is that 155.475 is PL 156.7 and repeated. I don't have the input to it, but this has been confirmed by numerous sources.

>154.92 NO P/L still be be used but is NOT Baymacs , I am posting it for
>informational reasons

Oh ok, you said it was the same as Baymacs, so it had me a bit confused.

Officer is ok... she was chasing a suspect down some stairs. Both her
and the suspect struck their heads on an overhand (guess it was low).
Officer is at Stanford and should be released today.

From: John Gotti
Topic: 37254 Message: 37254

Did anyone catch the activity on TG A-8 earlier today? I was listening and there was some incident on the great Highway involving PD and they had fire on stand-by. Great highway was shutdown in both directions for a time. Not sure what was up but sounded as if it may have been some sort of suspicious device?? Also ealier on that same TG I hear PD doing a "sweep" of the sunnydale projects. one officer found a box of .223 ammo hidden in an electrical panel and another officer also found some ammo. anyone catch this? was this a routine type deal or something special?Was interesting listening in any event.

37255. San francisco PD today

What is San Jose Fire's Dispatch freq? I haven't heard them on 154.010 in along time. Did they move or drop power down?

South San Francisco Fire was on 154.010 - Control 25 but they have moved to 154.100 - Control 21 and dispatched by San Mateo County.

KD20665 WPTB710 WPYW295 show up near Gabbs, Nevada. So you found a few wrong entries. That doesn't make the whole database invalid. I assume you will give us the real locations. In any event, Target Stores and hot dog shops aren't really that interesting.

I haven't seen police call in years, but it wasn't 1% as good as a Kelty Guide the last time I did see a police call.

Mike McKenna wrote:
> (1) the FCC web site is full of errors, (2) down or jammed with "users" who do not know how to use the site, (3) because the person requesting assistance is a "Newbie" -- the new guy is not going to be able to understand what or how to look or search -- using just the FCC web page (4) it just jams up the site for use by others that do know how to use the site. The FCC no longer uses "Catagories" such as Police, Fire, Special Emergency. Let the "Newbie" get the basics down first -- by using a "Policecall" or other directory -- first. Anyone can try to sell a book. Big deal. So what. If it helps someone get into this hobby -- and that person understands more --- he or she will be less likely to submit junk to this site. You just don't push the person off of the ship in the middle of the Pacific Ocean and yell "It's only 100 miles to shore". The FCC site has no errors ??? Check stations: KD20665, WPTB710 and WPYW295 and give me the nearest town or STATE.

Paul , I am surprized at you..........they switched to 155.025 well over a year ago, maybe 2.

ED
here is the lineup now for SJFD
155.025 dispatch
154.115 Command 3
153.98 Command 4 (repeated) used as backup for Command 3 and for airport and highrise incidents

155.88 Tac 5
154.355 Tac 6
154.01 Tac 7
154.310 Tac 8
153.83 Tac 9- yellow 153.845 Tac
10 - Blue
154.43 Command 2 (data)

tones for all above is 173.8

If possible, see if you can get someone to check the wall wart with a volt meter. If the radio is getting hotter than usual, it may be your battery pack has a shorted cell and the wall wart is fine. Fry's sells universal wall warts.

I don't let my scanners be powered by the wall wart continuously. I have a few sets of rechargeable and alkalines when needed. However, the 245 has that battery pack, so you are kind of forced to fry the battery.

If you use the 245 (or any Handheld scanner) as a 'base' and have it on all the time, you could always buy the 'cup' adapter to charge the battery, and keep the scanner simply plugged in with no battery....

IIRC, on the 245, there was a 'cup' that would charge the battery and then plug into the radio to charge the radio too, but you could obviously use it to just charge a battery AND keep the radio 'powered'. Don't know if that would harm the radio or not...

The best place for a "newbie" is in book form. Any book. It doesn't matter if its Policecall or any other book. There are Radio Shacks in every town. They sell the Policecall. I would love to buy a New Government Radio System book by Bob Keity. However I live in range County. Who sells the book ??? The idea of the post was to help someone get some needed information. The local Radio Shack and buying a Policecall book seem to be the best, fastest and cheapest route. It has maps, codes and information about scanning that the FCC site does NOT have. PS: I would love to buy a new Keity book. If anyone sells them -- please email me.

I have one of those "cup" chargers.[Well, somewhere. I really don't use it. It came with the scanner.] That does let you charge the battery outside the charger.

Wall warts have poor load regulation. That is, the output voltage is very dependent on the load. [This is one of the reasons that using a higher current wall wart than what came with the "load" is a bad idea since the voltage will be higher than the designer expected.] If you buy a regulated supply, then you could run the radio without a battery. Note that the battery pack itself is a voltage regulator. [And when the pack fails, it is a voltage deregulator. ;-)]

Evan, Gary and the group, Thanks for your posts. I'm in Orange County. I live near a HRO but they do NOT sell or are they willing to order any out of the area books. They said I should just call the Bay Area HRO store and have them ship it to me direct. But since there are several different Kelty Books -- I have no idea of the costs nor which ones I want to order. Does Bob have an email or phone ??? As for the 3 stations that show up as being in Nevada -- The Target Store and private business are both in Orange County and --- Platt Security is in Signal Hill / Long Beach area, even if they list the tower as being on a + 4,000' mountain. Evan, are you related to any on the owners??? Former Long Beach PD officers that started their own company. Good people. Later, Mike

Oh.....if your in Orange county, the book for you is Southern California Edition from scanner stuff. It is EASILY the best scanner book I have ever seen . Has more freqs, codes, maps than police call , Kelty and anything else combined. I had the Southwest version for my trips to Arizona . I wish they would do one for the bay area, but they told me they have NO plans to do one ;-(It would put Kelty to shame and consider this.....I LIKE Kelty had have several of his.

The guide looks pretty good. I snagged the LA air traffic page.

I noticed their guide has precinct maps. If someone has a good list of
precinct maps on the net, I'd burn Bob a CD. Maybe he will put them in
the next generation of the guides.

37285. OT: PL 106-521 and City Ordinances on CB'ers

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-02-18 23:05:21 UTC
From: Michael Wright
Topic: 37285 Message: 37285

hi all,

This is from another yahoogroups pertaining to mobile radios (Part 90). My first thoughts are FCC getting out of enforcement business and another is why do Part 90 LMR types concerned as they mostly are 150 and up. Amateur radio operators have been fuming for years the actions by such outlaws. I wonder who sponsored this bill.

Here's the article:

PL 106-521 and City Ordinances on CB'ers

My city is proposing an ordinance under Public Law 106-521 (47 USC 302a), in which Congress gave State and local authorities the power to take action against CB'ers using high-powered equipment and/or operating out of band (between 24 and 35 mHz).

Has anyone ever dealt with this in their localities? Anyone have a sample ordinance, or could send me a copy of a local ordinance? Any "war stories" would also be appreciated, and, if desired, will be held in confidence.

I'm going to speak to the City Council about this next Tuesday. The people who wrote our proposed ordinance are going to need a lot of help to make it usable and compliant with the Federal law.

Forgive me if this is considered off-topic by some -

First, a big thanks to Ed for passing along the information on Captain McCormack's memorial service to be held tomorrow, Saturday, at 1:30 p.m. at the HP Pavillion in San José.

For those interested in paying their respects to the family of Captain McCormack there is a comprehensive page of information available at http://www.sccfd.org/mccormack.html. In addition, for those interested in witnessing the procession, you will find a map that shows the route, which is mostly in Santa Clara.

If you should have any questions, please feel free to contact me off list and I will do my best to provide further information, or refer you to someone that can help you.

Ed, et al.

I spoke to one of the honor guards today ------ they are going to have
two trucks inside the "Tank" with fully extended laders and the
American flag hung from the top between the two. He said it's one of
the large flags like we see at some car dealers.

I was heading to Santa Rosa around 1:30 N/B 101. At the Kastania Road between Petaluma and Novato. There was the Sonoma Sheriff alongside the road. There were a few marked cars and undercover cars and the CSI van. There is a Farm House at the intersection. The front was taped off in yellow tape and some CSI photographers walking around taking PICS. Had my scanner on but no traffic about it on it. They were probably on Cells or Nextel. It had the traffic slowed down to a snail scrawl. All the Lookie-Looks including myself

Anyone know what happened?

I saw something in today's IJ about a pedestrian getting
killed there yesterday.

Isn't 460.025 the UHF CLEMARS channel as well? Interesting they would include it in BAYMACS but not 154.92.

Try the .pdf files in this index I found when searching the net. These are old Industry Kelty guides for No and So Cal. I did identify some of the So Cal freqs in Orange county with it. Even though some of them might be dated, it might be a good place to start. (There are some Target stores listed.)

Bob Kelty gave up on the Industrial Book. It wasn't a big seller.
However, Bob Eisner was into industrial monitoring, so Bob took it over
and Ed T. (sorry, I don't want to mangle your name) handled the on-line
distribution. Last I heard, Bob E. is in Pasadena, so the socal
industrial frequencies should be pretty much up to date.

Santa Clara County Fire coverage is being provided via mutual
aid from cities throughout the county today so SCCFD personnel can
attend the services for Capt. McCormack.

Milpitas has just sent 2 reserve Engines and a BC. Others
will follow shortly I am sure.

monitor 33.96 and White 1 / 154.28 for more information

I live in the Oakland area and while I'm waiting for the BC396 (will Oakland or San Francisco PD/FD go digital?) I'm using my Yaesu FT-897D and VX-7R to listen in on active simplex frequencies such as the OAK and SFO airports, Emeryville and Berkeley PD and others. I'd like to expand my short list... what are some of the more interesting (some of your favorite?) VHF and UHF frequencies in the Oakland and San Francisco area?
Thanks,
Paul

As well as Fire Blue, White 1 and 2 ("Memorial Communications"),
police comms heard for memorial procession routing and coord:

SCPD Police 3 (TG 80)
SJPD Citywide 2 (460.050 PL 110.9)

Sounds like they will be moving out from staging area soon...

37318. MERA Fire TGs

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-02-19 21:50:47 UTC
From: inigo4688
Topic: 37318 Message: 37318

Hi guys,

I just got a Pro-96 last night and got MERA all set up with win96. In the last day I've heard a lot of fire activity and I wanted to compare notes on the TGs with all the other MERA listeners on this group. Here's what I can make of their active channel scheme from listening within the last day:

24080 - Marin County FD Patch (to Control 4 - 37.1 MHz)
21616 - "Southern Area Fire"/Marin Misc. District FD Patch (to Control 6 - 46.5 MHz)

San Rafael FD:

26416 - E1 Dispatch Patch (to Control 16 - 46.2 MHz, transmission quality is better on this freq then the TG)
????? - E2 ???
26448 - E3 Control 3
26480 - E4 Tactical 4

Novato FPD:

26816 - D1 Dispatch
28816 - D2 Control 2 ("6181, IC on Control D2")
????? - D3 ??? (Kelty calls TG 28848 D2, is it actually D3? What is it used for? I haven't actually heard it active yet.)
28800 - D4 Tactical 4
????? - D5 Tactical 5 (Haven't heard this one active yet)
28944 - D6 Tactical 6 (Heard Battalion 6111 set up an IC here this morning)

Inactive stuff that might not end up in the channel scheme:

TG 8240 & 8272 are listed (in the bayscan/kelty MERA list) as Marin County Fire Dispatch Common 1 & 2, and the same list said TG 21616 was County Fire Dispatch. Since County is actually on 24080 and its the SAF district that's on 21616, I'm curious if 8240 and 8272 were thrown out.

Also, in the bayscan list, TG 21648 is paired with SAF Dispatch Patch 21616. I haven't heard this active yet, but if they are using it I'd guess they're patching it either to Control 13 or one of the 3 countywide VHF TACs? There's also the possibility they've thrown TG 21648 out of the lineup all together for now.

Some of this is speculation, but I just wanted to get the ball rolling again on MERA fire discussion as it develops, because it

seems like new things are popping up all the time. I'm very open to corrections and additional information at this point. :)

Thanks guys,

-Inigo

37320. Re: MERA Fire TGs - UPDATE

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-02-20 00:18:27 UTC
From: inigo4688
Topic: 37318 Message: 37320

Just two things to correct from my last post,

The Novato FPD Dispatch TG 26816 from the bayscan list is inactive as far as I can tell. Novato FPD sends their dispatch tone on 46.36 Control 35, then reads off the initial dispatch on TG 62800 "Fire APB". Units then call that they're responding on "Control D2" TG 28816. Tactical D4 and D6 are correct from my last post, and I heard a brief transmission by a 61xx novato fire unit on TG 28876 just now, and that might be "Tactical D5," because the TG ID is numerically between those for D4 and D6. On the other hand, with MERA that probably means nothings. ;)

Unrelated and OT from MERA, but I also found American Medical Response's EMS dispatch frequency for their BLS Ambulances in San Rafael. It's 155.16 MHz with a CTCSS PL Tone of 127.3. I heard checked it out long ago but didn't have a CTCSS capable scanner so I heard lots of stuff in San Mateo, Solano and Sacramento counties and assumed it was wrong. AMR's Marin ambulances are 81 through 88 (I saw a bunch parked in front of a building in the warehouse district of south san rafael, probably their office). Marin also has a county EMS Dispatch called "Marin 17" on 155.10 PL Tone 114.8, with ambulance IDs like "813." I had never really checked these out until today with the PL capability of my new scanner and was unaware of this info, so hopefully others on the group might find it useful.

SFPD already has some ENCRYPTED (not digital) talkgroups . I show the following
16 48 80 112 144 176 208 240 272 304

these are supervisory, narcotics and vice mainly

SFFD/EMS talkgroups that are ENCRYPTED are 944 and 976 (used for secure EMS talk, no fire)

A BC396 won't get you the above nor will any other scanner , ever.

Most of SFPD and SFFD can be monitored my the present trunktracker scanners and the bc396 will , of course get them

37326. PRO-83 Question

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-02-20 03:11:17 UTC
From: aviationplusphoto
Topic: 37326 Message: 37326

Hi Guys,
Any PRO-83 users that use non-rechargeable batteries or would be willing to try using just regular batteries in their PRO-83 to answer my puzzle question?
I have a new PRO-38 that I have used with only normal non-rechargable batteries.

Every time I use them after about 15 minutes the PRO-83 starts beeping and flashing low battery even with new batteries.
I have taken the batteries out of the radio and checked them on a battery tester and they show in the green.

Then I have new batteries out of the wrapper and put them in the PRO-83 and again the same battery low beeping and flashing after 15+ minutes. I have done this a number of times to checkout the new batteries and all with the same results.

I got fed-up and took my new PRO-83 to Radio Shack and told the MGR. the problem and he checked the manual and did the trouble shooting by the manual. He ended up giving me a new PRO-83 out of the box. Great, wow nice.

NO, I got home and checked the battery only operations for the next couple days and the new one did the same thing as other PRO-83 did.

I do not understand.
Would any of you please help me with this puzzle mystery?

Thanks for any help. Buddy

cheap batteries???? if you are switching from NiCad's to Alkaline batteries, you'll find that Rechargeable run at 1.2 volts and not a true 1.5 volt, Also you should charge your batteries overnight for the first time, and no more than 10 hours after

Then I have new batteries out of the wrapper and put them in the PRO-83 and again the same battery low beeping and flashing after 15+ minutes. I have done this a number of times to checkout the new batteries and all with the same results.

I got fed-up and took my new PRO-83 to Radio Shack and told the MGR. the problem and he checked the manual and did the trouble shooting by the manual. He ended up giving me a new PRO-83 out of the box. Great, wow nice.

NO, I got home and checked the battery only operations for the next couple days and the new one did the same thing as other PRO-83 did.

I do not understand.
Would any of you please help me with this puzzle mystery?

Thanks for any help. Buddy

From: Craig Rose
Topic: 37328 Message: 37328

Good evening all...

A quick note to let you know that I have finally uploaded images from today's memorial service and procession honoring the sacrifice of Captain Mark F. 'Mac' McCormack of the Santa Clara County Fire Department. For those interested, please direct your browsers to:

http://www.andromedafilms.com/carosephoto/emergency/index.htm

and click on the "In Memory" link for a selection of photographs from earlier today.

I hope that this will in some way allow those of you that could not attend this event to at least get a sense of the scale and power that hundreds of pieces of fire apparatus and thousands of firefighters can bring to bare when enduring the loss of a member of their family. I know that I will never be quite the same after today.

Regards,

Craig

As I figured, Craig got some great photos ..... many clearly show the "brotherhood" of fire fighters. Thanks Craig

Couple questions Craig? rough estimate of how many rigs were involved? and what jurisdiction traveled the furthest (in your estimation)

News mentioned Los Angeles which doesn't surprise me, any from further away, like San Diego? Any from out of state?

Thanks again my friend.

ED

Ed,

KNTV reported there were firefighters from as far away as New York.

I didn't see any FDNY engines, but did see LAFD and a Rancho Adobe. Don't know where that is.

Good show of fellow firefighters on the Merc's site, and a nice blurb about Spring Valley. :)

From: Tom Smith
Topic: 37326 Message: 37332

I have had a PRO-83 since the Thanksgiving sale. Battery life is acceptable, not great, but a lot better than 15 minutes. I assume the switch under the batteries is set correctly. (I'm not sure what the effect of an incorrect setting would be.) Others have complained about the battery life using the Signal Stalker feature. I do not use that feature, so can not comment.

Subject: [bayscan] PRO-83 Question

Hi Guys,
Any PRO-83 users that use non-rechargeable batteries or would be willing to try using just regular batteries in their PRO-83 to answer my puzzle question?
I have a new PRO-38 that I have used with only normal non-rechargable batteries.

Every time I use them after about 15 minutes the PRO-83 starts beeping and flashing low battery even with new batteries.
I have taken the batteries out of the radio and checked them on a battery tester and they show in the green.

Then I have new batteries out of the wrapper and put them in the PRO-83 and again the same battery low beeping and flashing after 15+ minutes. I have done this a number of times to checkout the new batteries and all with the same results.

I got fed-up and took my new PRO-83 to Radio Shack and told the MGR. the problem and he checked the manual and did the trouble shooting by the manual. He ended up giving me a new PRO-83 out of the box. Great, wow nice.

NO, I got home and checked the battery only operations for the next couple days and the new one did the same thing as other PRO-83 did.

I do not understand.

There were 4 representatives from FDNY in the back row on the main floor.

I believe they flew in to pay their respects and did not bring apparatus.

The radio traffic would have been something to tape with "Memorial
Communications"
keeping tally of the apparatus as they came and went on White Fire
1. 154.280 no PL
Hopefully somebody taped it.

I believe there were near 100 engines in the processional, with more
apparatus at the
HP Pavillion.

There were two news helos hovering over the processional taping as it
arrived at HP pavillion, which would
have been interesting to listen to as they jockyed for position, and to
avoid incoming SJC air traffic.

The news media was respectful and kept in the background for most of the
ceremony.

At least Craig caught my tiny head on camera in one of the distance shots
outside. ;-)

37334. Re: Frequencies for Sonoma County i have a Pro 95 Scanner

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-02-20 05:42:47 UTC
From: jjcooke@yahoo.com
Topic: 37319 Message: 37334

I'm having a hard time understanding exactly what you need. Are you trying to hear the SF trunk system? If so, you only need to have the correct control channels. You won't be able to hear them from Santa Rosa no matter what type of antenna you have - just too far. You should be able to hear them without a problem if you're in San Franciso and have the corret control channels and have the bank set to MOT.

A good source for frequencies is the Sonoma County list in the files section here or at www.radioreference.com . You have to register at RR but it's free and has a wealth of information.

If you haven't yet done so, you should get a programming cable from Radio Shack and then get Win95 from www.starrsoft.com . The program is free and it's much easier programming your scanner through a PC than by hand. You can also use P95 files that have already been created. I have a North Bay file I could send you that already has all the frequecies and trunk systems you need if you use Win95.

Antenna's tend to start religious wars as far as what's best. <g> Since it sounds like you're just starting out, you might try the Radio Shack #20-176 for a roof antenna and the Radio Shack magnet mount mobile antenna #20-032.

You can find a good list of California 10 codes at http://www.bearcat1.com/radioca.htm . They are not specific to Sonoma County but many of the codes are used by Sonoma County. A lot of the codes you'll hear are from the Penal or Vehicle codes. A disturbance, for example, will be a 415, which is the Penal Code section that covers disturbances. Most of these codes are covered at the web site I posted. Most other codes are standard APCO 10 codes with local modifications. You'll be able to figure most of them out by just listening to your scanner long enough.

Regards, Jim

Rancho Adobe is the old Penngrove Fire District up here in Sonoma county. Very nice pictures, Craig. As you wrote, they give a good feeling of the depth and scope of participation that occurs during a funeral of a firefighter killed on duty. God rest his soul and comfort his family.

37338. Golden Gate Transit Bus Freqs?

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-02-20 07:16:57 UTC

Topic: 37338 Message: 37338

Hey guys,

I was riding Golden Gate transit the other day in Marin and happened to notice that their radio communications were crystal clear, and sounded like they were on a digital system. At the time I thought "Great, they must be on the various Marin County Transit district TGs on MERA." Having set up MERA, I noticed that the only transit district TG I've heard so far is #1, and it seems to be Whistlestop wheels which drives around and picks up elderly people.

I did some scouting around on the FCC ULS Database and came up with KYF631 - 482.3875 and 485.3875 licensed to Golden Gate Highway & Transportation District which I thought was pretty close. So I plugged them in, and got a digital signal immediately. Horray! Only then I realized... It wasn't an APCO-25 IMBE signal. For one thing it didn't sound like one, and for another I was hearing it through an APCO25 capable scanner. "Sh*t!"

The signal sounds exactly like TDMA (one of the digital modulation methods used by cell phone companies like Verizon, and I think Nextel might use it too), and no one makes a scanner for it. I was just reading that Motorola iDEN systems use TDMA, could GGT be using an iDEN setup, or maybe just TDMA modulated conventional frequencies?

Anyone with the new Pro-83 scanner wannt to test the 'signal stalking' feature on one of Golden Gate Transit's busses?

Thanks,

-Inigo

Basically, I'm not sure whether I was even looking at the right
license or not. The only sure way to know would be to use a frequency
counter like the one built into the pro-83... or actually ask the
driver lol. They might not know though.

Topic: 37338 Message: 37346

Inigo,

I'm not sure how you're arriving at some of your conclusions about radios from how they sound but Golden Gate Transit operates on a conventional UHF-T band system. The lineup is:

Freq A - Busses 482.3875
Freq B - Busses 482.5375
Freq C - Busses 482.6875
Freq D - Bridge Patrol - 482.73.75
Freq E - Ferries 482.5875
Freq E - Supv/Admin - 482.8375

They don't broadcast in digital on any of these frequencies so I'm baffled by your comments about picking up a digital signal. I'm assuming you're using a Pro-96 but GGT's signals would sound the same from any scanner that can receive the UHF-T band. They have a lot of repeaters up here so their signals always sound good but it has nothing to do with TDMA or iDEN.

Regards, Jim

Hi Ed,

Rough estimate on the number of rigs would have to be about 120. It was stunning to witness. Off the top of my head, I know for sure Los Angeles sent an engine and this may have been the most distant apparatus participant yesterday. Here is a partial list of apparatus:

ATF - Explosives/Fire Investigation
Alameda - Engine 1 or 2741
Berkeley Fire Department - Engine 2243
Boulder Creek Fire District - 2136
CDF San Mateo County - Engine 1762
Colma Fire Department - Engine 86
Davis Fire Department - Engine 31
Defense Logistics Agency San Jaoquin - Engine 262
Daly City Fire Department - Engine 92
Ebbetts Pass Fire Department - Engine 431
Emeryville Fire Department - Truck 2442
Fremont Fire Department - Engine 3850
Gilroy Fire Department - Engine 71
Kings Mountain Fire Department - Engine 356
Livermore-Pleasanton Fire Department - Engine 1248
Lodi Fire Department - Engine 1
Los Angeles Fire Department - Engine ?
Marin County Fire Department - Engine 1563
Marinwood Fire Department - Engine 58
Milpitas Fire Department - Engine 4
Mountain View Fire Department - Engine 6
Murphys Fire District - Engine 242
Napa Fire Department - Engine 1
Napa County Fire Department - Engine 210
Napa County Fire Department - Engine 318
NASA Ames Fire Department - Engine 5
Newark Fire Department - Engine 3944
North County Fire District - Truck 5271
Novato Fire Department - Battalion 6105
Novato Fire Department - Engine 4
Oakland Fire Department - Engine 20/2560
Orange County Fire Department - Engine 29

Ed, I think the Southern California participants were the long distance champs.

Here's a short list of some of the apparatus participating in the procession - I'm not 100% positive on some of the IDs, but here goes...

ATF - Explosives/Fire Investigation
Alameda - Engine 1 or 2741
Berkeley Fire Department - Engine 2243
Boulder Creek Fire District - 2136
CDF San Mateo County - Engine 1762
Colma Fire Department - Engine 86
Davis Fire Department - Engine 31
Defense Logistics Agency San Jaoquin - Engine 262
Daly City Fire Department - Engine 92
Ebbetts Pass Fire Department - Engine 431
Emeryville Fire Department - Truck 2442
Fremont Fire Department - Engine 3850
Gilroy Fire Department - Engine 71
Kings Mountain Fire Department - Engine 356
Livermore-Pleasanton Fire Department - Engine 1248
Lodi Fire Department - Engine 1
Los Angeles Fire Department - Engine ?
Marin County Fire Department - Engine 1563
Marinwood Fire Department - Engine 58
Milpitas Fire Department - Engine 4
Mountain View Fire Department - Engine 6
Murphys Fire District - Engine 242
Napa Fire Department - Engine 1
Napa County Fire Department - Engine 210
Napa County Fire Department - Engine 318
NASA Ames Fire Department - Engine 5
Newark Fire Department - Engine 3944
North County Fire District - Truck 5271
Novato Fire Department - Battalion 6105
Novato Fire Department - Engine 4
Oakland Fire Department - Engine 20/2560
Orange County Fire Department - Engine 29
Palo Alto Fire Department - Engine 2
Presidio Fire Department - Truck 51
Rancho Adobe Fire District - Engine 9165
Redding Fire Department -- Engine 45
Riverside County Fire Department - Engine 83
Roseville Fire Department - Engine 7
Rohnert Park Fire Department - Engine 9985

Salida Fire Protection District - Engine 23
San Benito County Fire Department - Engine 9331
San Mateo County Fire - Engine 217
San Rafael Fire Department - Engine 57
Santa Clara Fire Department - Engine 10
Sonora Fire Department - Engine 751
South County Fire Department - Engine 13
Spring Valley VFD - Engine 22
Stevens Creek VFD - 33
Stockton Fire Department - Engine 7
Sunnyvale Fire Department - Engine 4
Tracy Fire Department - Engine 97
Union City Fire Department - Engine 3472
Valero Refinery Fire Department - Engine 2
Woodside Fire - Rescue 7

There were many, many more, but these are the ones I caught on camera.

Good morning Craig ,,,,,,,,,,thanks for the list . Interesting

Kind of Ironic,, Backdraft was on last night , you'll remember two fire fighters died in the movie at the end.

Seemed like I had a hard time watching that part , especially the funeral procession knowing one just happened for real here at home

thanks again for the pics and information

godspeed Capt McCormack

Yeah , but FDNY didn't have a rig (you can't expect them to travel
THAT far)

As Craig points out , his list is the ones he got pics of. another
poster said they counted a total of 110 , with 80 of them in the procession.
Remember SCCFD asked for ONLY one rig per dept for the procession. Had they
not , you can bet the local depts like SJFD and other would have sent even
more. SFFD isn't on the list but you know they were there as were many others not
listed.

thanks to Craig for taking the time to type out the list.

Jim,

Give credit where credit is due.

These files were NOT composed by Kelty. Bob couldn't generate a pdf
file if his life depended on it.

Bob Eisner and myself were doing these for about a year and a half. We
stopped because of the lack of contributions.

> the PL capability of my new scanner and was unaware of this info, so
> hopefully others on the group might find it useful...

The 155.1600 freq is decades old. It has been passed down from the
old United Ambulance that used to service Marin up until about the mid
'90s. AMR bought their Marin assets. United Amb was a sub-company,
that also included San Francisco Amb Service and Acme-Western (east bay).

Marin 17 is the *ambulance control* for the county. Not only do
private providers use it to communicate to Comm Center, but all fire
ambulances have it, too.
That ID *813* is actually A-13, as in Ambulance 13. That is a St
Joseph's Ambulance BLS (non-paramedic) car. The *P* units, as in
P-12, are the one-medic ALS paramedic cars. A=BLS amb, P=private
medic amb, M=fire medic amb or engine (ME=Medic engine).

When MERA is in full operation, it is my understanding that the Marin
17 function will be transferred to the *EMS* (A2) talkgroup.

Topic: 37338 Message: 37365

Hey guys, what Ed suggested would make the most sense, but I'm actually hearing this only on channel A. However Jim, Ch B and C and the supervisors all had lots of activity this morning because of an accident involving a bus on 101 this morning near Vista Point. Thank you very much for the additional frequencies. However, I see nothing 'baffling' about me initially suspecting they used digital radios -- Channel A is still bursting alive with this low tone "buzzsaw-like" digital signal every few seconds, so I'm guessing it's telemetry of some kind (I certainly haven't seen MDTs on their busses, but there are plenty of other applications they could use it for IF they had the money). Yahoo cut off the end of your email address so I couldn't send it yet, but if for some reason you still don't believe me I'd be happy to attach you a recording of it in a private email (just can't do file attachments through yahoo groups). It sounds nothing like APCO-25 IMBE digital (which has a distinctive change in signal at the end of each transmission), but sounds exactly like the sound you hear when you make a cell phone call while holding your cell phone right next to your scanner. (I was promted to make the connection to TDMA when my friend answered his older AT&T wireless cell phone last night and it made a strikingly similar noise to what I've been hearing on 482.3875.)

What you hear is most likely "Data" transmitted from buses back to the Dispatch Center and back. Lots of transit systems have added vehicle status sensors to warn of Engine or vehicle problems and status. Even the air pressure in the tires can be monitored. Sometimes you can avoid hearing data transmissions by using the "PL" or "DPL" -- .

Thank you! That's it. If you use a PL of 173.8 you'll get speech and no data (even though I still haven't heard speech on Ch A). Thank you. And sorry Jim I was way off, thanks for settin me straight on the freqs.

Inigo,

No problem. If you had described the signals as tone bursts I would have understood what you were hearing. Each bus is equipped with a rather primitive GPS locater system. It sends a data burst every 30 seconds to bus operations and the location of each bus is shown on a map. The system also compares time now to the scheduled time and alerts dispatchers if a bus is late (as if GGT ever cared if a bus was late <g>). Channel A is also used for the emergency alert system which sends a data burst every 5 seconds if the driver hits their panic button. The drivers have a small bone mike they are supposed to wear so the dispatcher can contact them to find out what the problem is. That's about the only time you'll hear voice traffic on Channel A. 173.8 is the correct PL for voice. The bridge patrol channel can also be interesting when the weather's bad or they have a jumper.

Regards, Jim

Actually it was Union city PD I was referring to, not "Cal State Hayward or East Bay" Apparently they had a shooting there on fri night with a teen shot in the arm leg and stomach sustaining superficial wounds according to the Mercury news report. Fri nights is usually live local band nights and Sat nights is a DJ and Karaoke according to the website and the news article.

I most humbly appologize to both you and Bob E. In my defense, one of the files did have Bob K. as editor (along with yours for artwork) on the standard inner flyleaf. But I didn't think Kelty had any publications for So Cal like that so this clears things up.

BTW, when I was looking for business freqs on my last trip to the southland, these files were the most accurate I could find, so I really understand the work that went into this. I heard you recommend the directory from scannerstuff.com. Does it have this kind of detail?

Thanks
Jim

37374. Marin County SAR

Yahoo group: bayscan (2005-01 — 2005-05)

Hey guys, California Dept. of Parks & Recreation Park Rangers have been active in a search for an eight year old boy who ran away up near the Dipsea/TCC trails (I think these are up Mt. Tam a little ways near Mill Valley?). This has been going on for about an hour and they just advised they're notifying the Marin County Search and Rescue team.

857.9375 DCS 125 - DPR Park Rangers GOLD
48.38 PL 82.5 - Marin Municipal Water District Watershed Rangers

Haven't heard the SAR team yet. Last I heard (isn't one of their members also a member of this group? Maybe he could confirm later) they used CLEMARS VHF 2: 154.935 MHz.

-Inigo

P.S. I've updated the Marin County Fire Departments excel file to include Inverness Volunteer FD, they were dispatched this morning on a false alarm.

IIRC, the Dipsea faces the ocean, so it wouldn't be near Mill Valley.
They run a race on the trail, so it should be documented on the net
someplace.

I was on Mt. Tam when they did search training and I think your
frequency is correct. (At least the 154.9 part of it.) They set up a
portable repeater.

Hi Jim,

I don't know about the rest of the group, but I sure would be interested in the North Bay P95 file that you have created. I know that I have made a few of my own, but chances are that I may have missed a few interesting freq's. Perhaps you could post your P95 file in the group's files section, that way we all could take advantage of your hard work. I thank you in advance.

Subject: [bayscan] Re: Frequencies for Sonoma County i have a Pro 95 Scanner

I'm having a hard time understanding exactly what you need. Are you trying to hear the SF trunk system? If so, you only need to have the correct control channels. You won't be able to hear them from Santa Rosa no matter what type of antenna you have - just too far. You should be able to hear them without a problem if you're in San Franciso and have the corret control channels and have the bank set to MOT.

A good source for frequencies is the Sonoma County list in the files section here or at www.radioreference.com . You have to register at RR but it's free and has a wealth of information.

If you haven't yet done so, you should get a programming cable from Radio Shack and then get Win95 from www.starrsoft.com . The program is free and it's much easier programming your scanner through a PC than by hand. You can also use P95 files that have already been created. I have a North Bay file I could send you that already has all the frequecies and trunk systems you need if you use Win95.

Antenna's tend to start religious wars as far as what's best. <g>
Since it sounds like you're just starting out, you might try the

Radio Shack #20-176 for a roof antenna and the Radio Shack magnet mount mobile antenna #20-032.

You can find a good list of California 10 codes at http://www.bearcat1.com/radioca.htm . They are not specific to Sonoma County but many of the codes are used by Sonoma County. A lot of the codes you'll hear are from the Penal or Vehicle codes. A disturbance, for example, will be a 415, which is the Penal Code section that covers disturbances. Most of these codes are covered at the web site I posted. Most other codes are standard APCO 10 codes with local modifications. You'll be able to figure most of them out by just listening to your scanner long enough.

Regards, Jim

An interesting 'listen' is audio from County Fire starting at about 7:55 AM Saturday. Hearing engines from all around staff basically unfamiliar stations in unfamiliar neighborhoods shows the sense of comradery and brotherhood firefighters have for each other.

I too would be interested in hearing traffic from White-1, although it appears no one recorded it, perhaps someone can get a copy from one of the agencies perhaps?

For any who have firefeeds.com montor LA County ....right now they have a bunch of rescues from mud/landslides , flooding etc . I am hearing people trapped in cars , in houses and more.......hard to keep track of how many or where......but VERY interesting

As follow up on scannerstuff.com while this has some business freqs , it tends to lean more to Fire/Police/EMS/Avaiation .....in any case , its well worth the 24.95 price.

I don't know what you're looking at, but we had a pretty good
squall line through Hayward a couple of hours ago, and I see red
cells around Napa right now:

http://radar.wrh.noaa.gov/radar/loop/DS.p37cr/si.kmux.shtml

Our hail was BB-sized and lasted only about 10 minutes. Six
or eight thunderclaps.

I was in Fairfield during the hail storm around 16:30 today and it really
came down hard!
BTW, how come there were no email regarding the tornados ihn the Sacramento
area? It was really something up there today. Fortunately, we just missed
the heavy stuff coming down on west bound 80 around 13:30 earlier today.
Glad to be home!

yeah, one hit in the natomas area , some damage , tossed a grocery cart thru some ladys car glass

the dopplar radar I refered to earlier was posted about 15 minutes prior to the time I sent the post .....real strange , I expected to see yellow even red cells.....only some green in the central valley.....some sort of glinch I guess

I got so many warnings from NWS it was hard to keep up.

Also if you're just interested in listening to the frequency temporarily (and without scanning others) you can use the tune feature. TUNE, 154.935, ENTER (should be paused by default).

They must have found the boy before SAR got too involved because I had to run to San Rafael and when I came back it was all normal radio traffic. No setting up portable repeaters or anything.

From: inigo4688
Topic: 20400 Message: 37394

Marin was hit really hard with the thunderstorm. It was real on again off again weather. One cell would fly through with pounding rain and lightening, then it would get sunny, then ten minutes later there would be another thunderstorm. Really ridiculous weather, especially with tornados in Sac!!! Provided for interesting aviation listening too, since all the pilots arriving over the north bay were trying to find holes in the squall line to slip through with their weather radar, and coordinating with center so as not to hit other traffic doing the same thing.

I am in Sonoma County, on a mountainside at 1500 feet; we got about half
an inch of hail here. No NWS activation and only heard one mention of a
tornado watch on LE/PS frequencies. Lightning got as close as 3300 feet
(by flash-to-bang) from us as the storm passed over.

Hi Ben, Grass Valley PD went high band maybe a couple years back, and is a repeater using 156.00 as their output.
Nevada County sheriff uses 155.565 as their output, curious about the input also.
Grass Valley PD may not be on at night, leaving it up to County Sheriff to patrol. I didn't hear any activity on their frequency at night this past Saturday and Sunday when I stayed in that town. Jim

Actually there was a lot of damage in SAC. One guy had his car lifted a foot then dropped it back down. All his windows were smashed out. A few Semi Trucks tipped over too. A few houses had their shingles ripped off their roofs. I was out in the valley visiting a friend and KCRA 3 was on most of the afternoon with weather reports and video of the Tornado's (2) in the SAC and SOL and YOL area's

Topic: 37404 Message: 37405

GRANT IC calling a second alarm at this time (manpower).

Fire Attack (Div. 4) request to go negative pressure on 4th floor to contain smoke and need to check for extension on the 5th floor and orders two additional dry-chem extinguishers to be delivered. Also advises they have broken out a window and are using a blower to evac smoke.

ENGINE 3 (Div. 5) crew reports light to moderate smoke on the 5th floor via open laundry chute, but no fire and no apparent extension, with all patients evacuated.

Fire Attack (Div. 4) advising fire knocked down and heading to 4th floor for ventilation and to deliver a dry chem extinguisher.

Division 4 (4th floor) update advising MV E2 crew, and MV TRUCK 1 crew on 4th floor, COUNTY ENGINE 16 back to staging for new bottles and rehab, smoke condition moderate, fire ready for overhaul phase and secondary search in progress.

Division 5 (5th floor) calling all clear on secondary search with light smoke remaining.

COUNTY ENGINE 7 - bottling up and bringing hi-rise hose strip
COUNTY ENGINE 15 - bottling up and bringing hi-rise hose strip

This will be the last update unless conditions warrant.

Hi Nina -

Ya know, I'm in the dark as to what batteries they were referring to.

Oh, and by the way, I didn't forget about you...it's been absolutely
insane lately. ;^)

Hey Inigo,

You're hearing San Rafael Fire running drills on future San Rafael Fire MERA TG's 26448 and 26480.

Normal emergency and non-emergency San Rafael Fire radio traffic can still be heard on 46.20 and simulcast on TG 26416.....at least until San Rafael Fire switches completely to MERA which I hear will be soon.

The way I catch the drills is I hear multiple engines supposedly responding CODE 3 but I hear no sirens in the background of the Fire trucks radio transmissions. :-) Not to say that's the way it is all the time and every department out there running drills but that's the pattern I've seen here in San Rafael so far... ;-)

Yeah, I was thinking they sounded WAY too calm, and all the same
units in east San Rafael by Mission then appeared in Marina 5 minutes
later. Happened way too fast. It was really interesting to listen to
their radio procedures though.

-Inigo

P.S.- Found a new MERA TG this morning I'll email you offlist about.

I got the impression that he depended more on Internet sales than walk in sales. If that is the case, he might be closing the shop and just selling on line. I'm sure half the bay area customers were buying at the store but getting the Internet price. At least, that is what I did.

Wouldn't surprise me. His regular prices were (are?) way overpriced. Hard
to compete with HRO or any other mail order shop.

This system is digital only. Somehow the system was changed on Radio Reference but I've changed it back.

I used to listen to it but it's pretty boring in my opinion. Open this gate, close gate, open that gate, close, etc etc.

One of the problems with a website like radioreference is someone
submits information that they think is correct, but actually it replaces
the information in the database that WAS correct. I'm not sure how you
solve that problem.

Hi,

In order to better serve our retail customers, we are moving to a newer and larger space. The address and directions to the new store will be posted on our web site in a few days. We depend upon our loyal and repeat retail customers, as much as our mail order customers, and will continue to serve all of them with personal service, both in the store and on the phone.

Please stop by the new store if you are in the Bay Area, after we open (hopefully on March 1st).

Glenn Cohen, Scanners Unlimited

37439. SJFD station 18 info?

Yeah, I saw that too. The map is helpful. Any clue as to what is based there, ie engines, trucks, etc? I'm planning on trying to listen to some Freqs and see if I can tell what she is responding to. I found this page http://www.sccfd.org/frequencies.html and i will plug in some of them. Do you guys think this is possible? I think if I figure out what equimpent #'s they have and then listen to the main dispatch (is there one?) and try to google a list of what the codes mean...that would be interesting...

just in case 18 gets involved in mutual aid.....put in Santa Clara County Fire freqs

154.25 (main dispatch)
154.145 (tac for south county - like Morgan Hill)

as a side note , Station 18 will lose its Truck company in a couple years , when Station 35 opens over by IBM , it will become Truck 35 with Rescue-Medic 35

37450. [bayscan] SJFD station rebuilding and new construction

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-02-24 00:29:16 UTC
From: Craig Tomasello
Topic: 37439 Message: 37450

Just in case anyone wants to know... I looked all this up for Ed, and for any other SJFD fans here's what's happening in the building and remodelings of fire stations:

Station 33, the privately funded constructed station, is rumored to be at Curtner and Almaden Expressway. I thought it was supposed to be near Hilsdale and Pearl. I can't find anything official on it.

New Fire Station Projects

Fire Station No. 24/36 (Silver Creek/Yerba Buena) - Staff are coordinating final assessments of a City-owned site for Fire Station No. 24/36 near Silver Creek and Yerba Buena Roads.

Fire Station No. 34 (Berryessa) A site on Las Plumas Ave was acquired to construct new Fire Station No. 34 and a north satellite training center. Design of this fire station is underway.

Fire Station No. 35 (Cottle/Poughkeepsie) The same consultant for Fire Station No. 34 is providing design services for the new Fire Station No. 35 which will be located adjacent to the Southside Community Center. Design of this fire station is in progress.

Fire Station No. 37 (Willow Glen) Staff is identifying search areas for siting this new station.

Fire Station Relocation Projects

Fire Station No. 12 (Calero) The City is under negotiations with a property owner for the relocation of Fire Station No.12 (Calero).

Fire Station No. 17 (Cambrian) The City purchased a site on Blossom Hill Road for the relocation of the station. Design is underway.

Fire Station No. 21 (White Road) Staff are assessing various site options near the vicinity of White Road and Cunningham Avenue for the relocation of Fire Station No. 21.

Fire Station No. 23 (North East SJ) The Fire Department is currently evaluating sites for this station relocation project.

Fire Station No. 25 (Alviso) Preliminary design and environmental clearance work are underway.

Construction has begun to rehabilitate Fire Station No. 7 (Emory St).

Fire station emergency generators will be installed in batches to achieve economy-of-scale with installation of multiple units. The first batch of generators will be installed in Fire Station numbers:

4 (Leigh Ave), 13 (Pearl Ave), and 26 (Tully Rd). Design and permitting are underway with construction scheduled to begin Spring 2004. In addition, the project teams have begun

design work on fire station upgrade projects at various stations including Fire Station Numbers 5 (N 10th St), 10 (S Monroe St), and 14 (San Tomas Aquino Rd).

Hi Ben,

Believe it or not, most Public Safety agencies can and do reject candidates for any number of reasons. It could be something as minor as a family member or X-Wife that may have made a statement that they did not like, or something in your medical background that they feel would make you a candidate for early retirement.

You do have a right to find out what it was, but generally it will take the assistance of a lawyer.

Probably not.

> The department refuses to tell you why you didn't pas background...So
> I am
> totally in the dark as to what hung me up. Can I sue for my paperwork
> under the freedom of information act?

Not unless it's a federal agency, if even then.

State and local agencies in California are not covered by the FOIA, but rather by the "California Public Records Act", which is in the California Government Code, ?? 6250 - 6276.

Under section 6254 (f) exempt from disclosure are "Records of complaints to, or investigations conducted by...any state or local police agency, or any investigatory or security files compiled by any other state or local police agency..(blah blah blah)... [and], nothing in this division shall require the disclosure of that portion of those investigative files that reflect the analysis or conclusions of the investigating officer."

That's heavily edited. At any rate, "suing" is several steps down the road. You have to request the specific documents/information you want, and they have to either provide you access or tell you they won't. THEN you could take your chances with a court.

My guess is that even if an agency DID release the information, it would probably be very heavily redacted to protect the privacy of anyone who provided them with any information about you.

hm

I could care less who said it. All i want is to know what specific
categories I failed on. I have no criminal recored WHATSOEVER... so i'm lost

Would it be worth it to hire someone to conduct my own background check
to see what comes up...Or do people even do that sort of thing?

Yes, it sure CAN be discouraging. I haven't seen any recent numbers, but my guess is that probably way less than 10% of applicants manage to land a job with a PD/FD, whether for a sworn or non-sworn position. And I doubt that a criminal record is very often the reason.

As stiff as the competition for these jobs is, the agency has the luxury of selecting from the (apparent "best of the best' by the time they get to the hiring decision.. and only one person can be chosen for each opening.

Over my checkered career I applied to probably 20 LEAs, several of them repeatedly. Only two of them ever told me why I didn't make the cut... one said "immaturity", which was undoubetly true, as I WAS an immature 21-year old, and the other was an old "minor" health problem. So I kept plugging away, applying *everywhere.* Finally got the dream job. And a couple others years later.

If my 10% guess is accurate, I'd suggest you go apply at at least nine more agencies to even up your odds. And each application, each exam, each interview helps prepare you even more for the NEXT one.

hm

I went through a background check awhile back and I was told that in California they have to give results by state law
So If I was you I would do some research on Google.
If you have no criminal problems how's your credit? they use that too as stupid and irrelevant it could be.

Yes, the drunken alpha hotel is the exception to the rule. Usually it's
geek talk, antenna talk, etc.
